What is **ASTHMA**?

<u>INSIDE</u> LUNGS = **__**swollen + clogged

INFI AMFD

AWFUI !!

NORMAL

if you STOP swelling first, you won't get symptoms.

Uncontrolled asthma can scar your lungs

Why does it matter if I have symptoms if it doesn't bother me?

- Asthma INFLAMMATION (swelling) causes INJURY to your lungs.
- When injury heals, it leaves a small stiff SCAR.
- Over time, the scars add up (**REMODELING**).
- Your lungs get stiff, making it harder to breathe.

REMODELING

it permanently scars your lungs.

control medication stops SCARRING

and prevents SYMPTOMS

ASTHMA CONTROL - for ages 5 to 11yrs

OVER THE LAST MONTH	ALL green = WELL CONTROLLED	ANY yellow but NO red = NOT WELL CONTROLLED	ANY red = VERY POORLY CONTROLLED
symptoms	2 or LESS times a <u>week</u>	3 or MORE times a week or many times a day > 2 days/wk, or	MANY times a <u>day</u>
night time wake up for symptoms	2 or LESS times a <u>month</u>	3 or MORE times a <u>month</u>	2 or MORE times a <u>week</u>
using	2 or LESS	3 or MORE	Several
rescue	times	times	times
inhaler	a week	a <u>week</u>	a <u>day</u>
activity	NONE	SOME	VERY
limitations		limitation	limited
Peak Flow	MORE THAN	60 to 80%	LESS THAN
	80% of best	of best	60% of best

Your asthma is:

adapted from the National Guidelines (2007) Figure 3-4c

ASTHMA CONTROL - ages 12 yrs to Adult

There are really only 2 KINDS of ASTHMA MEDICATION

SLOWER CONTROL MEDICATION

Prevents **swelling** and **obstruction**. Control medication STOPS scarring in your lungs

(Takes days to weeks to start working)

Take if needed

FASTER. RESCUE MEDICATION

Treats spasms (active symptoms) Does NOT treat swelling - Does NOT stop scarring

CONTROL _____ Remember: CONTROL/RESCUE _____ Obstruction RESCUE _____ Spasms

Works in 5-20 minutes

STOP the SCARRING—CONTROL it!

SOS!

Getting a routine down

For control medication to work, you have to take it consistently. Skipping once in a while isn't a big problem, but missing a lot is. You've got to make it easy to remember!

Here are some tips for success:

What do you do every morning?

Keep your inhaler + spacer next to it!

What do you do every night?

Keep a second inhaler + spacer next to it!

And...Set a reminder on your phone!

What are your symptoms of asthma?

Let's Talk About Asthma©

NO! **YES**

cough

mucus

wheezing

short of breath trouble breathing

cough at night

FEVER

chest pain/tightness

symptoms with exercise

clearing throat a lot

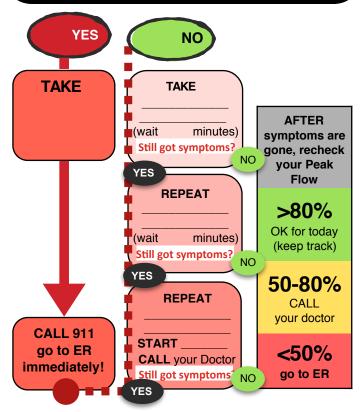

tiredness

SYMPTOMS = SOS*

*Swelling Obstruction Spasms

Understanding the National Guidelines: How to treat an asthma attack

Do you have any SYMPTOMS of LIFE THREATENING ASTHMA?

Adapted from U.S. DHHS, NIH. Expert Panel Report 3: Guidelines for the Diagnosis and Management of Asthma (EPR-3). https://www.nhlbi.nih.gov/files/docs/guidelines/11_sec5_exacerb.pdf. 2007), p 381-2

LIFE THREATENING ASTHMA SYMPTOMS

tap on buttons to learn why

get immediate medical attention !!

How to take inhalers

because <u>ANYONE</u> can do it wrong.

- 1. Stand up.
- 2. Shake the inhaler.
- 3. Breathe OUT.
- 4. Hold the inhaler up right.
- 5. Start breathing in AND puff the inhaler.
- 6. Breathe in as deep as you can.
- 7. Hold for 10 seconds, breathe out.
- 8. Wait 1 minute and repeat if needed.

MAKE SURE YOU RINSE YOUR MOUTH AFTER TAKING STEROID INHALERS.

(or you can get a yeast infection in your mouth.)

Don't forget to use a spacer!

Spacers help more medicine get in your lungs. When you use your inhaler with out a spacer a lot of the medicine gets lost.

- 1. Shake inhaler and attach it to the spacer
- 2. Breathe OUT
- 3. Put the spacer mouth piece in your mouth, squirt in one puff into the chamber, and then inhale slowly through your mouth
- 4. Hold for 10 seconds (a long time!)
- 5. Wait 1 minute and repeat as directed
- 6. Clean your spacer if needed

get more medicine in your lungs!!

How to take **dry** powder inhalers

- 1. Stand up.
- 2. Open and prime the inhaler (twist or click back).
- 3. Hold the inhaler out straight and flat.
- 4. **Breath OUT** completely (but not into the inhaler or you can lose the medicine).
- 5. Seal your lips tightly around the hole
- 6. Suck IN the medicine HARD, FAST, and DEEP.
- 7. **Hold for 10 seconds**, breath out through your nose, and rinse your mouth.

MAKE SURE YOU RINSE YOUR MOUTH AFTER TAKING STEROID INHALERS. (or you can get a yeast infection in your mouth.)

How to use a Digital Peak Flow Meter (PFM)

Best of 3 tries:

1. Turn it on, hear it beep.

(set slider to 0 if not electronic). Stand up straight.

2. BREATH IN.

Put the tube in your mouth, seal your lips around it. Hold straight out like a trumpet.

3. BLOW OUT.

Take the biggest breath you can. Blow HARD and FAST.

4. WRITE IT DOWN.

Write down the score.

5. RESET + REPEAT

Try again twice more.

The BEST (highest of 3 tries) is your PEAK FLOW!

PEAK FLOW METERS

show how <u>FAST</u> you can blow air out of your lungs. It's a way to measure

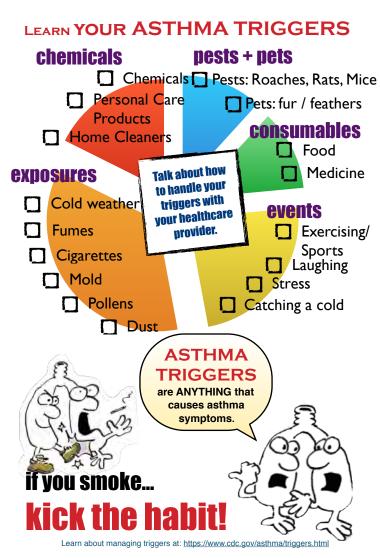

<u>Swelling + Obstruction + Spasms</u>

Find <u>YOUR</u> personal best

Are you green, yellow, or red?

People with asthma should exercise and be active just like everyone else

PROS:

- Exercising strengthens your lungs
- Exercise decreases inflammation
- Exercise = fewer symptoms over time. Exercise is being healthy
- Exercise is part of controlling asthma.

CONS:

Exercise can trigger symptoms.

SOLUTION:

 You may need to take your albuterol inhaler 15 minutes BEFORE exercising.
