ABSTRACT

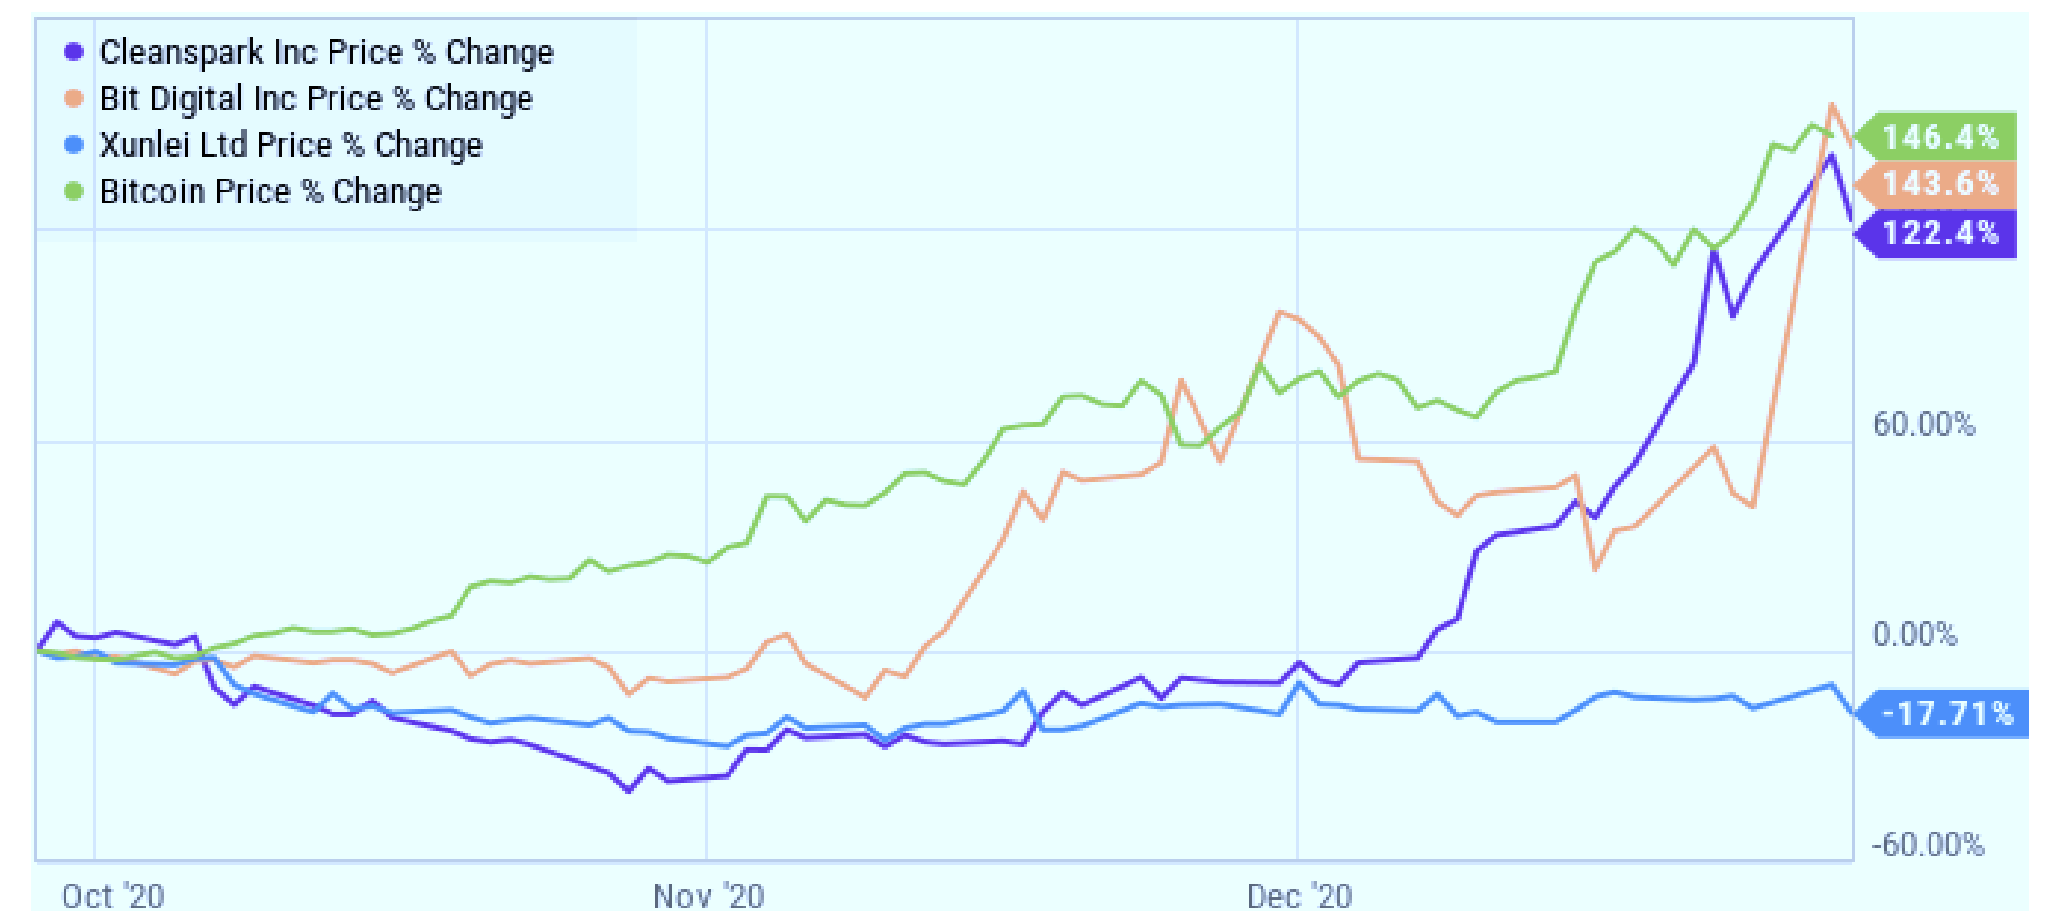

- This paper mentions the price fluctuations of cryptocurrency and stocks under speculative environment. We have been seeing that the market trend points out an existence of a highly speculative bubble.
- Over the period of last 10 years, the trend in price movements of bitcoin has proved to be strongly speculative and on the other hand due to drastic change the world is seeing the prices of stocks has even been drastically upscaled.
- In this particular regard, investors might be curious about where and what instances might be fundamental point in these speculative price changes.
- When it comes to endogenous market movements, stocks have a significant issue to distinguish it from cryptocurrencies for the exogenous market movements to understand speculative bubbles better.

ASSUMPTIONS AND KEY CRITERIA

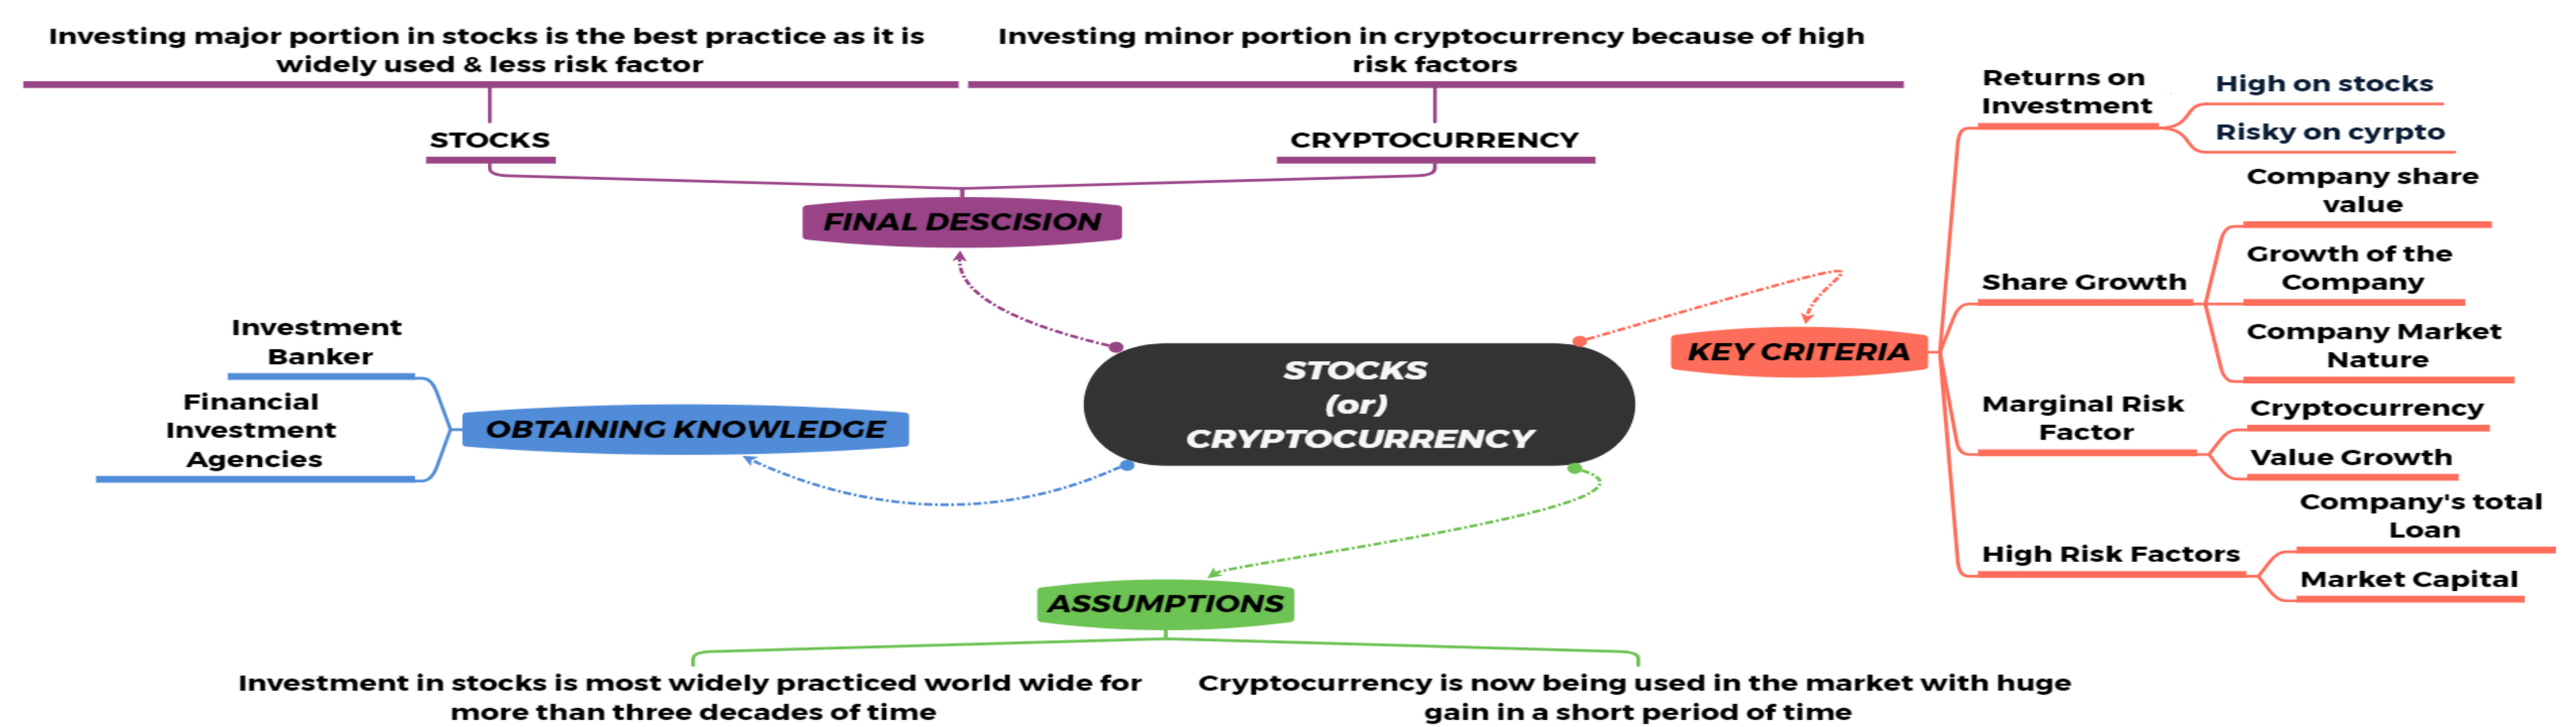

- The trouble with market assumptions is that if everyone makes them, they might not have any actual impact on stocks if the market has correctly adjusted for it.
- Almost all the cryptocurrencies, including Bitcoin are secured using a technology called a blockchain, which is constantly checked and verified by a huge amount of computing power.
- By comparison, stocks are offered by companies as equity or ownership in that company.

ASSESSMENT AND INVESTMENT PLAN

CONFLICTS AND CONCLUSIONS:

- Future of investment is cryptocurrency because it use a public-private key cryptography technology to transfer ownership of the coin on a secure and distributed ledger.
- This private key is an ultra secure passcode that no need to be shared with anyone anytime while sending the currency, with which you can send value over the network and it is impossible for anyone to hack your private key.
- Most of the cryptocurrencies can be 'mined' via decentralized network of computers. But mining doesn't just generate more bitcoin or Ethereum - it's the mechanism that updates and secures the network by constantly verifying the public blockchain ledger and adding new transactions.

FUTURE RESEARCH

- With cryptocurrency there are wide range of things you can do, and the list grows along with time. Few ways to spend cryptocurrency participating in everyday activities such as Shopping, Travel, Donation, etc.,
- Stocks represent a partial ownership in the company, Stocks are perpetual instruments so long as the underlying company remains solvent. If these are not bought on margin the the entire investment can be lost.
