Let's think about all the ways we collect data in our day-to-day lives.

With the widespread use of mobile phones and the Internet of Things, we are already collecting data in many ways. You can take a photo with a smartphone and link to the location using geolocation on your device. With some phones, you can even look at a map and see all the locations where photos were taken.

##Share your thoughts!

- + In what ways do you already collect data in your life?
- + Do you collect or have access to data about your own environmental impact and resource consumption?
- + What can we find out about our environmental impact from the tools we already use?
