2007

Abstract

Powerful and diverse countertransference reactions in psychotherapy group work with HIV positive children can be understood to indicate a site of mourning in the life of the group. Data from six interviews with five individuals conducting broadly psychodynamic group work with HIV positive children was analysed according to Thematic Content Analysis. The countertransference responses of the participants are understood as communications of the group unconscious, as well as expressions of the participants' own unresolved unconscious difficulties. Working with HIV positive children confronts the participants with mortality and activates their earliest losses. A sense of strangeness and displacement, denial, idealisation, feelings of persecution, fantasies of rescue, rage, despair and hopelessness emerge in the countertransference and can be considered indicative of defences against mourning. These defences alternate with an engagement with the work of mourning and are represented in the countertransference as the relinquishment of omnipotence, awareness of fusion, containment, the recognition of the child's resilience and uniqueness and the promotion of the child's autonomy and expression. These findings may facilitate containment for therapists working with HIV positive children by offering an explanation of powerful and diverse countertransference responses as indicating a site of mourning, thereby promoting increased receptivity to unexpressed grief in therapy with these children.

Declaration

I declare that this dissertation is my own unaided work. It is submitted for the degree of Masters in Clinical Psychology in the University of the Witwatersrand, Johannesburg. It has not been submitted before for any other degree or examination in any other university.

Julia Kuhn

_____ day of _____, 2007.

This research report is dedicated to all children living with HIV/AIDS.

In your luminosity, you teach us.

Acknowledgements

I wish to express my gratitude to the following people, without whom I would not have been able to produce this research report:

My supervisor, Professor Gavin Ivey for his thoughtful review of my work, his assistance in locating literature, and his help in accessing individuals to participate in this research.

All the individuals who participated in this study, for giving so willingly of their time and speaking generously and courageously of their feelings about their work with the children. I have been privileged to walk even just a short way on this journey with you.

My sister, Alex Kuhn, and parents, Jean and Hagen Kuhn, who assisted me financially during lean times while undertaking this research.

My teacher, Geshe Phende, Jasper and my family at Lam Rim, for teaching me, in so many ways, about the richness of embracing death.
