## **Abstract**

This study aims at exploring the complexity of involving informal settlement communities in policy-making processes at city-level. The key objective is to extend our understanding of the practice of public participation by focusing on the involvement of one of the most disadvantaged sectors of society living on the peripheries of contemporary cities. Many studies have dealt with the participation of informal settlement communities in the planning, implementation and management of localized development projects. This study explores the involvement of these communities in making policies that not only address their local immediate needs, but also contribute in the future development of the cities where they live. Informal settlement communities generally experience social, economic and spatial exclusion. The informal and/or 'illegal' nature of informal settlements often hinders the involvement of their residents in local political processes thus adding to their vulnerability and marginalization. Advancing citizenship rights of these communities contributes to guaranteeing their inclusion and access to what cities have to offer.

The thesis consists of two parts in addition to an introduction and a conclusion. Part One looks at theoretical perspectives on the notion of public participation with a focus on the participation of poor sectors of society in policy-making processes. This part also explores various approaches to urban management and examines the extent to which these approaches enable participation of informal settlement communities in city-level policy making. Part One also looks at the possibilities and limitations of informal settlement communities in policy-making by drawing on experiences from the Municipality of São Paulo in Brazil. Part Two of the thesis then shifts discussion to the policy and practice of public participation in the City of Johannesburg and empirically examines the extent of involving the informal settlement communities of one of the city's administrative regions in policy making processes.

The study establishes that participation in city-level policy-making processes is very complex due to the nature of issues addressed and the multitude of actors involved. It also shows that participatory approaches to urban management, which seek to combat inequality and realize social justice in cities, provide an environment conducive to the involvement of informal settlement communities in policy-making at city level. However, to achieve successful involvement of these communities in policy-making processes, city governments need to have the appropriate mandate that enables them to deal with issues that matter for the dwellers of informal settlements such as access to urban land, housing, basic services, education and health. In addition, city governments need to be open to and supportive of informal settlements, and have appropriate mechanisms for their participation in policy-making. From their side, informal settlement communities can only benefit from participatory opportunities if they have strong, well connected community structures that seek to make their voices heard. The study also finds that in a democratically open system, the actual practice of participation is continuously evolving through the interplay between policy and legal provisions and elements of micro contexts. Facilitators of this evolution are local officials and community organisations.

## **Dedication**

This thesis is dedicated to my late parents, who inculcated in me a continuous  
love for knowledge and learning, and  
To my loving wife, Faiza, for her unconditional love, support and encouragement  
throughout the course of this work.

## Acknowledgements

All praise is due to Almighty Allah, with His compassion and mercifulness I managed to complete this Ph.D. project.

I would like to express my sincere gratitude to my supervisors: Associate Professor Marie Huchzermeyer and Associate Professor Aly Karam for their invaluable and unlimited guidance and support throughout the study. I would like also to extend my thanks and appreciation to members of staff of the School of Architecture and Planning, University of the Witwatersrand, especially former Chair of the Planning Programme Prof. Philip Harrison who assisted me during the early stages of the conceptualization of this study. I would also like to thank Prof. Alan Mabin, Head of the School of Architecture and Planning, and Dr Mfaniseni Sihlongonyane and Dr Tanja Winkler from the Planning Programme in the School of Architecture and Planning, who read and commented on my draft of this thesis or part of it. I would also like to acknowledge my fellow PhD candidates in the School of Architecture and Planning for comments on parts of my draft chapters or during presentations at the School: Alfred Omenya; Georgine Peter; Grace Lubaale; and Luke Obala.

In the same vein I would like to acknowledge the support of Dr. Alex Kenya Abiko, Director of the *Departamento de Engenharia, Escola Politecnica da Universidade de São Paulo* and the staff of his office for their support during my field work in São Paulo. Many thanks also go to Dr. Renato Cymbalista and his colleagues at the POLIS Institute in São Paulo for facilitating some of my contacts in that city. Similarly, I would like to thank, at the City of Johannesburg Metropolitan Council, Mr Rashid Seedat of the Corporate Planning Unit and Mr Jeffrey Ramphaka from the Office of the Speaker of the City Council who were of great help. I would like to acknowledge the contributions of my research assistants: Eddie Maluleke who administered the main survey in the informal settlements of Ivory Park; and Victor Reis who helped me with translation during the field work in São Paulo.

This work would not have been possible without the generous support and encouragement from members of my family and my friends. Special thanks to my brothers and sisters and their families: Mohamed, Hao'waa, Abdullah, Zahraa, Mahmoud, Bahar Eddin, Noor Eddin, Ibrahim, Mahasin, Abdul-Salam, Ismail and the rest of my extended family. I would like also to express my appreciation to my in-laws, particularly my mother-in-law, Al-Hajah Zeinab Awad, for keeping company with me and my wife during the final stages of this thesis and for her daily prayers. I would like also to extend my gratitude to my friends: Dr Hatim Abdulfadil and his family, Aly Abdulrahman and his family, Ramadan Breima and his family, Jalal Abdullah, Al-Ameen Mohamed Ibrahim and his family, and the rest in South Africa and Sudan.

My thanks and gratitude to the twenty interviewees from Johannesburg and São Paulo and to the ninety informal settlement community leaders who responded to the questions of my main survey. Without their contribution, this thesis would not have been possible.

My deepest gratitude and sincere thanks to my wife, Faiza, to whom this thesis is dedicated. Her unflagging love and support throughout the course of this study made it possible for me to overcome all the challenges that I faced.
