Jack Bazuzi
Managing Director
VTLS Europe

About VTLS

*Our job is to
create visionary solutions
for libraries
and information centers*

VTLS Has Three Core Businesses

1. Integrated Library Systems
2. Institutional Digital Repositories
3. RFID for libraries

About VTLS

- More than 900 systems worldwide
- Serving more than 3000 libraries worldwide
- Financially sound, privately held, fast growing

About VTLS

- ISO 9000 Registered Company
- Over 30 years experience in library automation
- Active in NISO, ALA and IFLA...

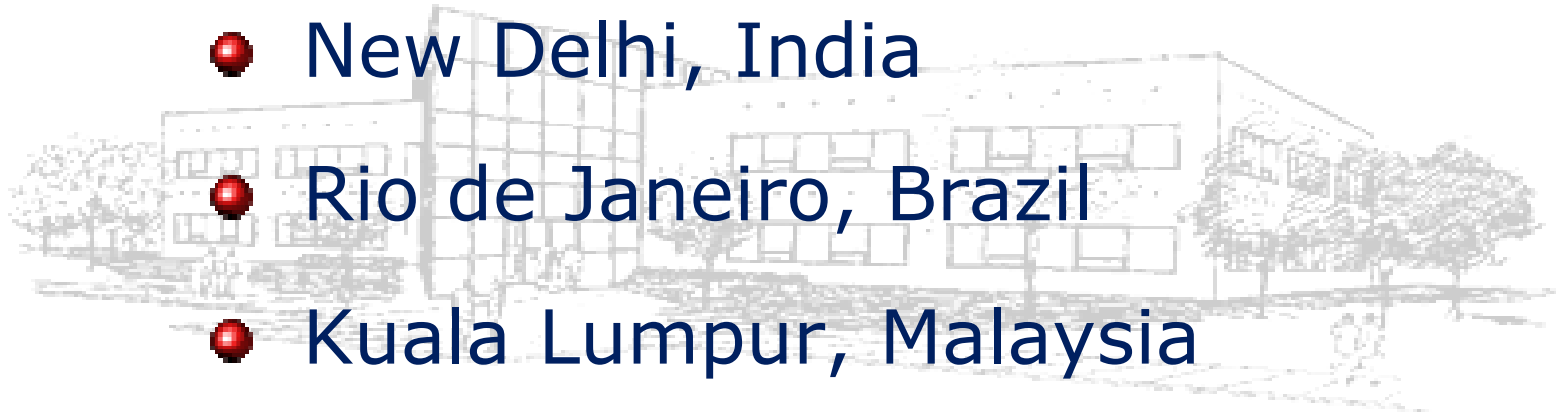

Corporate Headquarters

- Virginia Tech research park
- Following VT incubation period
- Independent, international, successful...

Corporate Offices

- Blacksburg, Virginia, USA
- Barcelona, Spain (EMEA)
- New Delhi, India
- Rio de Janeiro, Brazil
- Kuala Lumpur, Malaysia
- Melbourne, Australia

Regional Representation

- Kuwait
- Greece
- Tunisia
- Taiwan
- Nigeria
- Saudi Arabia
- Thailand
- UAE
- Australia
- Morocco
- Pakistan
- Qatar

VTLS International Advantage

- Office of International Operations
- Local and regional representation
- Globalized (not localized) software design
 - Multi-lingual UI
 - Multi-script input, display, storage - UNICODE
- Close relationship with local operations
 - Local support
 - Local training
 - Frequent visits
 - Long term partnerships

VTLS Partner Products

What is a Digital Object Repository?

What is a Digital Object Repository?

- Stores and maintains digital objects (digital assets)
- Provides external interface for Digital Objects
 - Creation
 - Modification
 - Access
- Enforces access policies
- Facilitates self-submission
- Offers preservation facilities

Goals of Institutional Repositories

- Self-archiving of institutional research
 - Thesis and Dissertations (VTLS ND LTD Project)
 - Article reprints and post prints
 - Internal documents and maps
- Management of digital collections
- Preservation of materials
- Housing of teaching materials
- Electronic Publishing of journals, books, posters, maps, audio, video and other multimedia objects

**Steven Harnod, University of Southampton*

Services of Institutional Repositories

To allow digital collections to be:

- Accessible to as narrow or as wide a group as you desire. (i.e. institutional or global)
- Exposed to Web search engines like Google
- Plugged in to e-learning systems like Blackboard
- Used to create sub-collections to support topics, types of objects, or other designations.
- Makes content easily reusable in supporting research and education.

Services of Institutional Repositories

Repository Services offer:

- Management
- Creation
- Storage
- Indexing
- Cataloging
- Searching & Retrieval

Services of Institutional Repositories

- Storage and management of any content format, including rich-media, due to VITAL's repository object architecture
- Integration with existing systems through open, standards-based protocols
- Search full-text content of PDF, DOC, RTF and other document formats
- Display high resolution imagery, multi-page documents and specialized data formats (MARC, EAD, TEI, etc.)
- Automatically capture preservation metadata and create long-term, citable DOIs
- Storage of content in native XML provides support/validation against any metadata schema
- Support for aggregation of like-content in collections
- Automatic metadata extraction and validation (facilitates preservation)

Services of Institutional Repositories

- Web-crawler indexing and exposure (Google, etc.)
- Language support and UNICODE compliance
- Support for custom index creation for resource discovery
- SRW/SRU Interface for exposure of repository content
- Tracking content changes through versioning
- Robust facilities for batch ingest of content
- Support for link resolving against an institution's OpenURL server
- Support for dynamic creation/export of content citations (EndNote, text)
- Facilities for web-based self-submission of diverse content types (VALET)
- Integration with Fedora™ repository architecture allows for extensibility

Impact of Institutional Repositories

- Give a new purpose to libraries and librarians
- Extend the role of the library in an academic institution or a community
- One can visualize the development of community repositories like community water systems in cities and towns
- Librarians can become active partners in preservation and access of local digital content

*VTLS Information Technology
for Advanced Learning*

VITAL - Introduction

- Institutional Repository (based on Fedora)
- Software for creating, storing, managing, cataloging, indexing, searching & retrieving your digital collections
- Backed by VTLS software and services

Shortcomings of existing products

- Narrow focus on specific media formats (e.g. image databases, document management)
- Fail to effectively address interrelationships among digital entities
- Fail to address interoperability
- Fail to provide facilities for managing programs and tools that deliver digital content
- Not extensible; do not enable easy integration of new tools and services

**Tim Sigmon (Director, Advanced Technology Group UVA)*

What is Fedora™?

Flexible Extensible Digital Object Repository Architecture

What is Fedora™?

- Developed by *University of Virginia* and *Cornell University*
- Supported by Mellon Foundation Grant
- Fedora™ Commons
- Open Source Software
- Supports all types of multimedia
- Details to follow!

Reasons to base VITAL on Fedora™

● Open source

- Free
- VTLS is a contributor

● Flexible

- Development can be in any programming language because the API is based on Web services

● Extensible

- We can write workflow tools that facilitate different types of functions
- Digital object model (architecture) allowing for complex objects

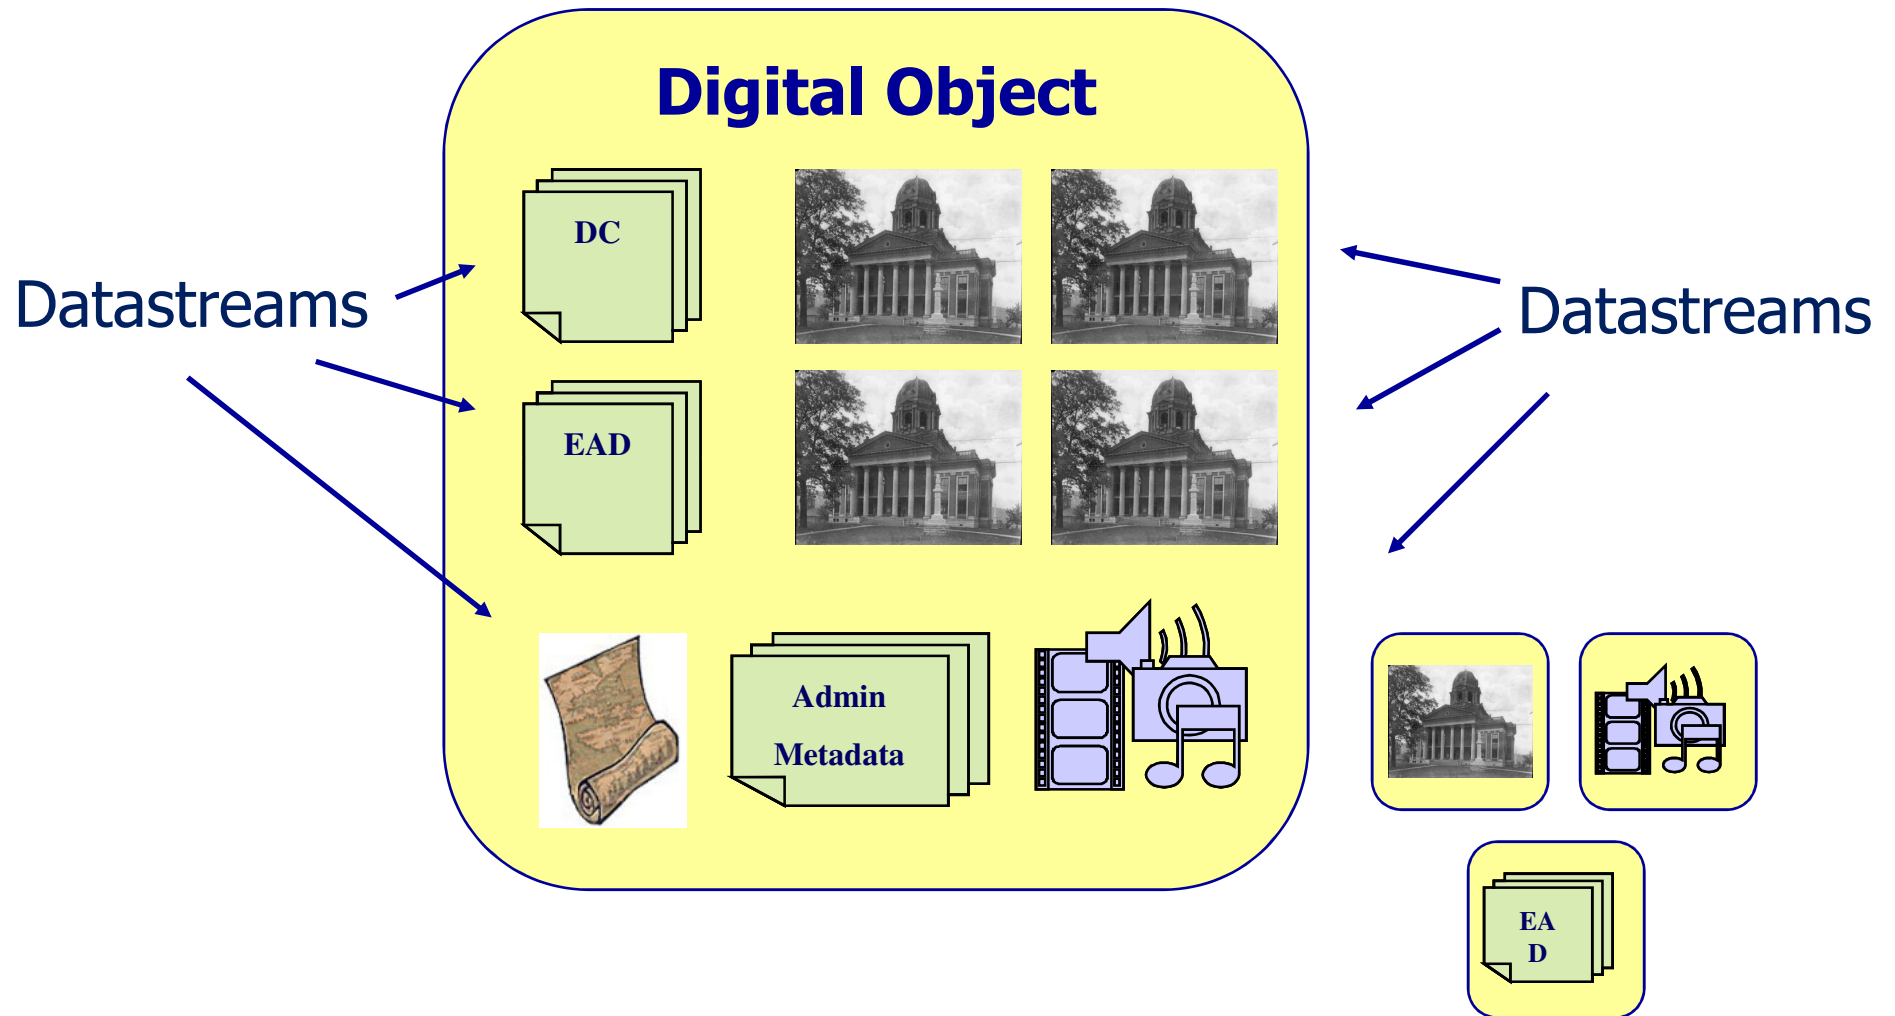

Reasons to base VITAL on Fedora™

- XML Submission and Storage
 - Digital objects are stored as XML-encoded files
 - Conform to an extension of the METS schema
- Permits handling of complex objects
- Native OAI-PMH support
- Scalable

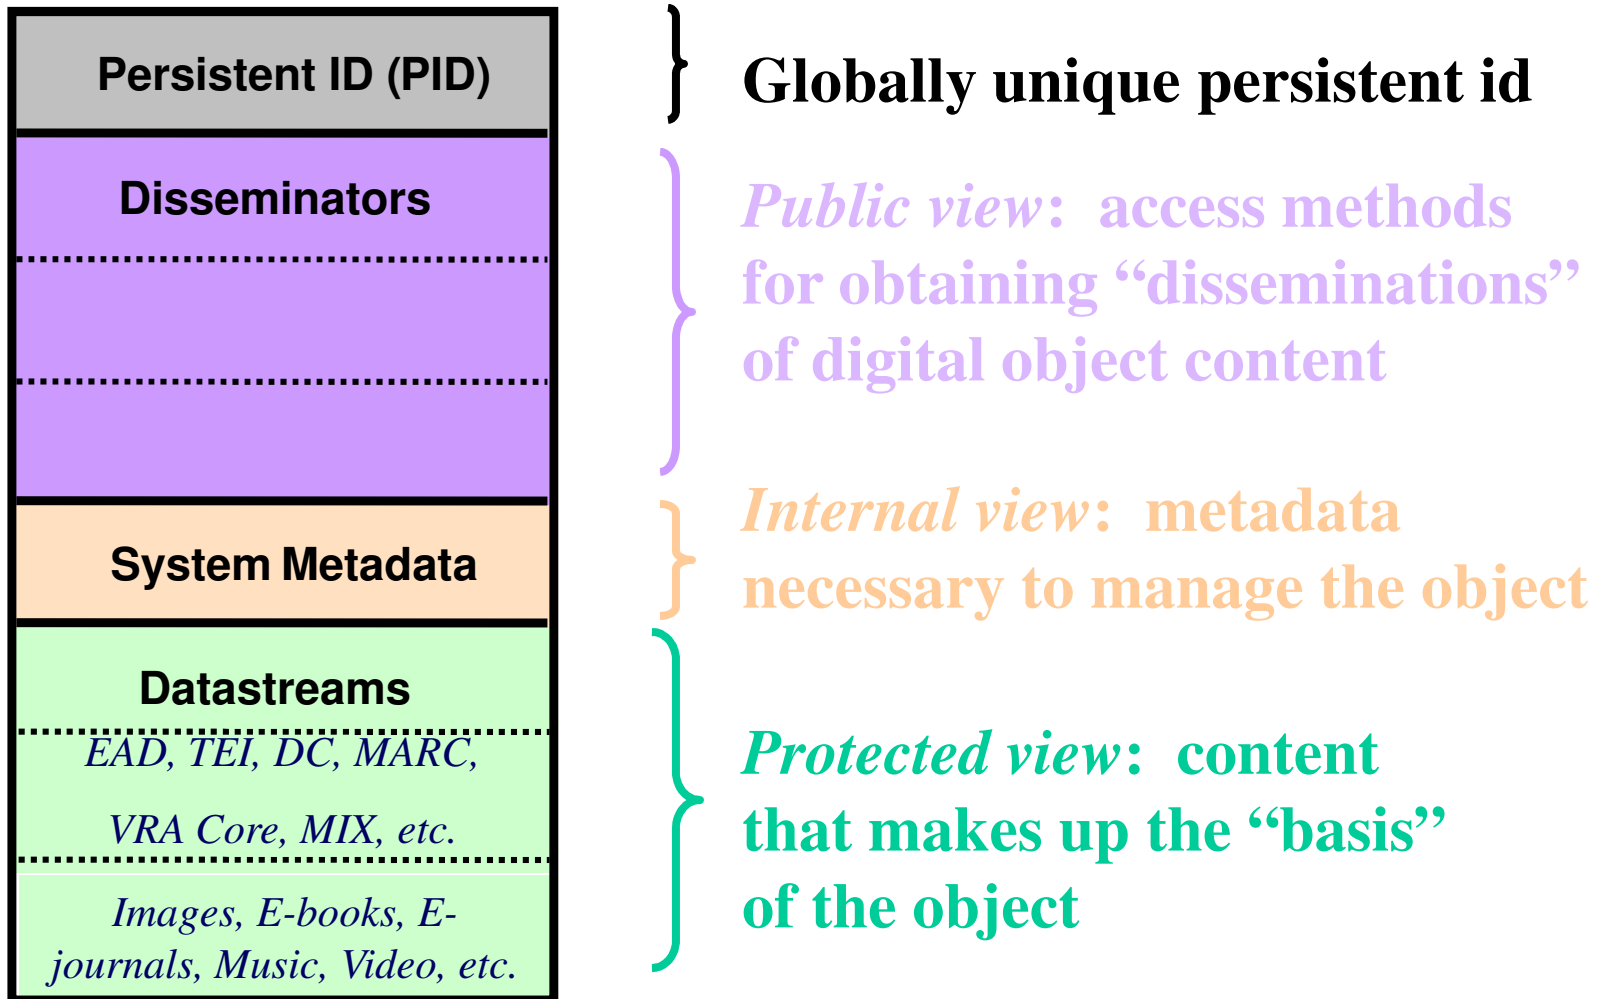

Reasons to base VITAL on Fedora™

- Persistent storage for content & metadata
- Content can be local and/or remote
- Content versioning
- There is a community of developers that continue to enrich Fedora™
- Low cost procurement for customers

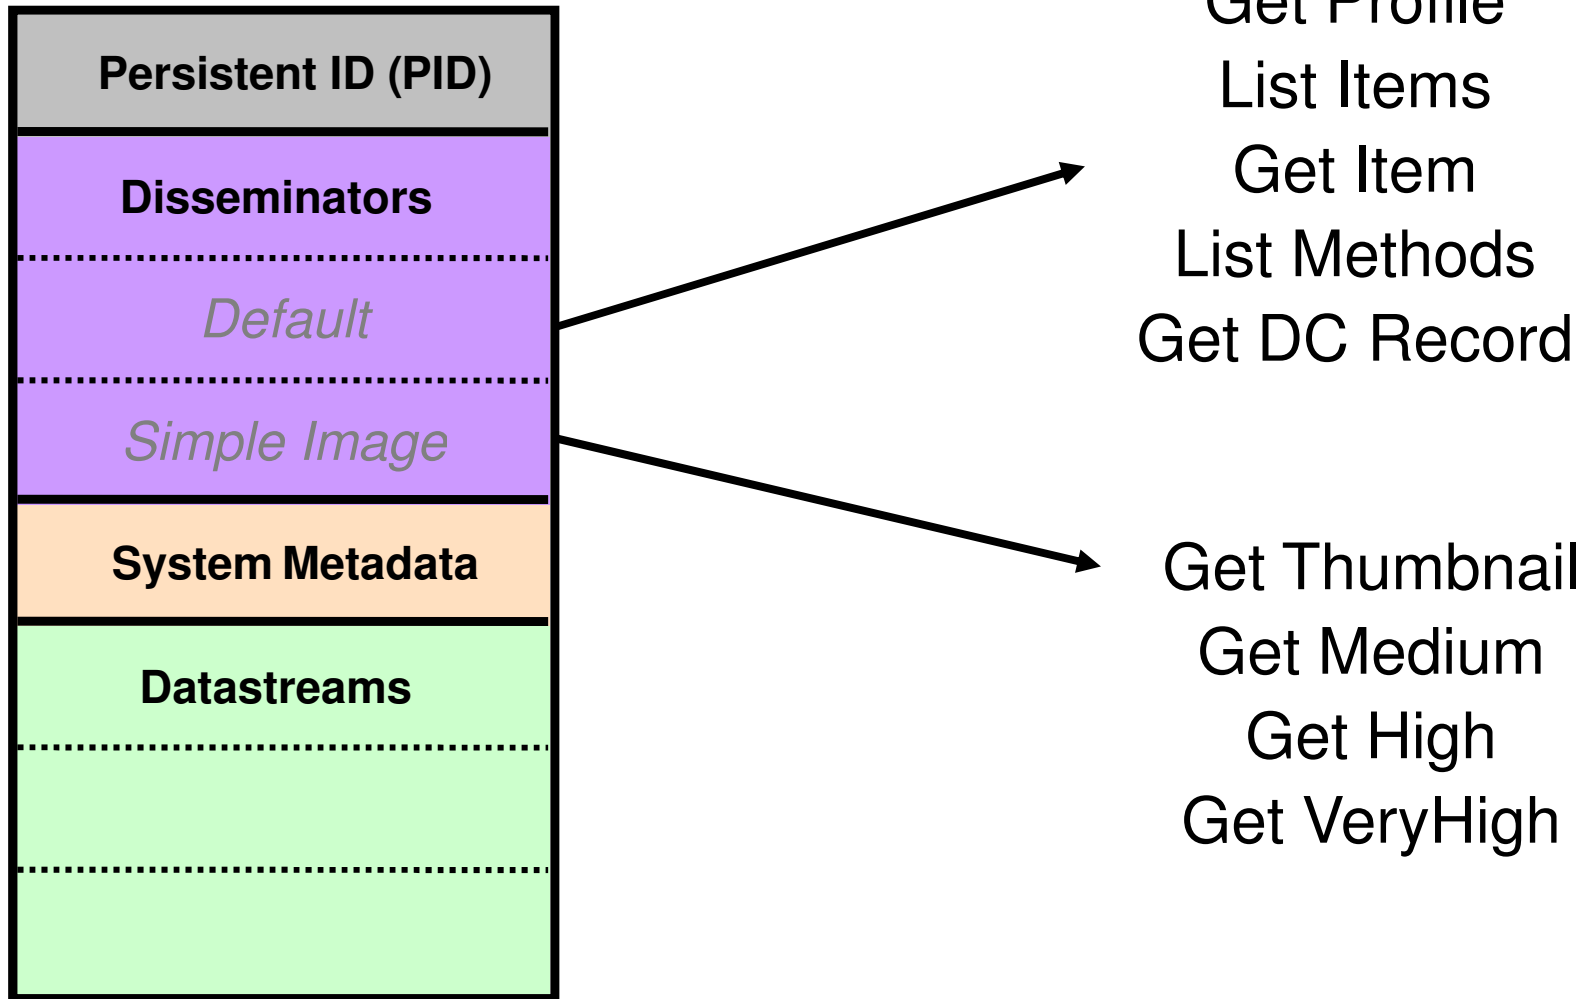

Create Complex Digital Objects

Fedora™ Digital Object Architecture

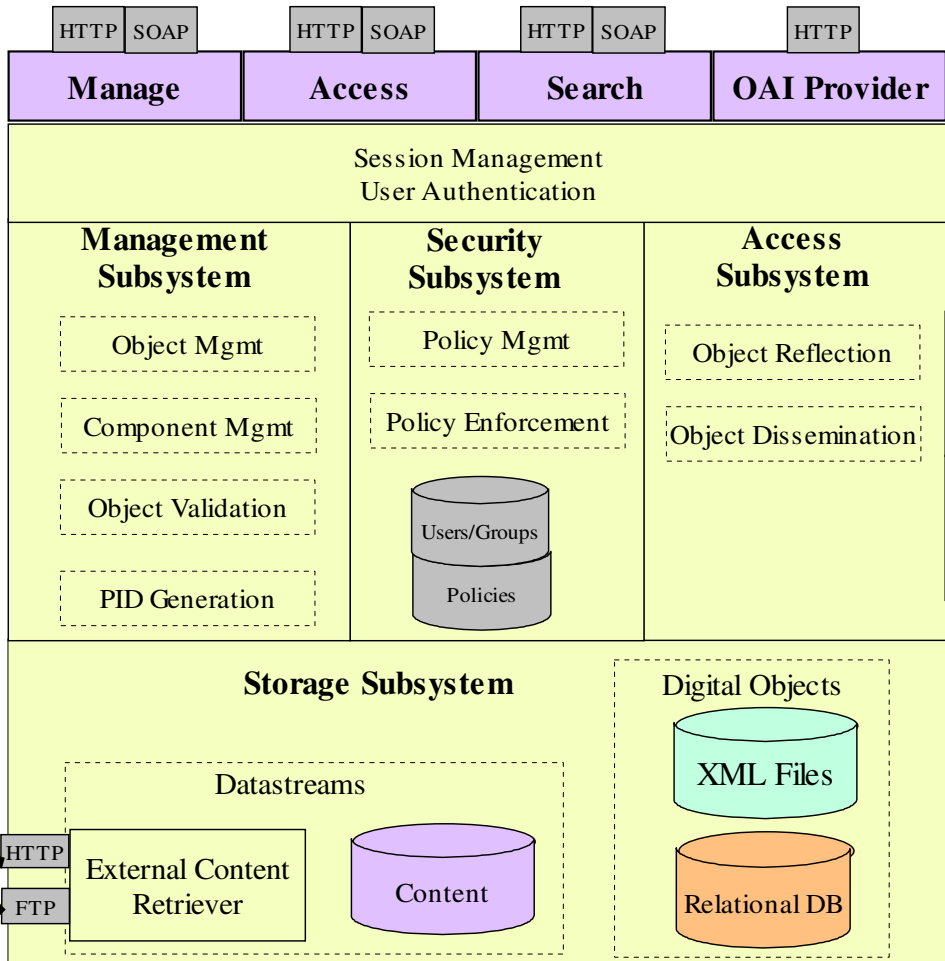

Example Disseminators

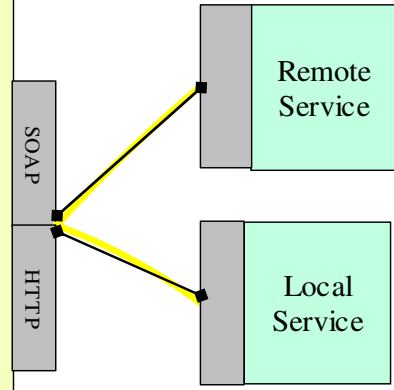

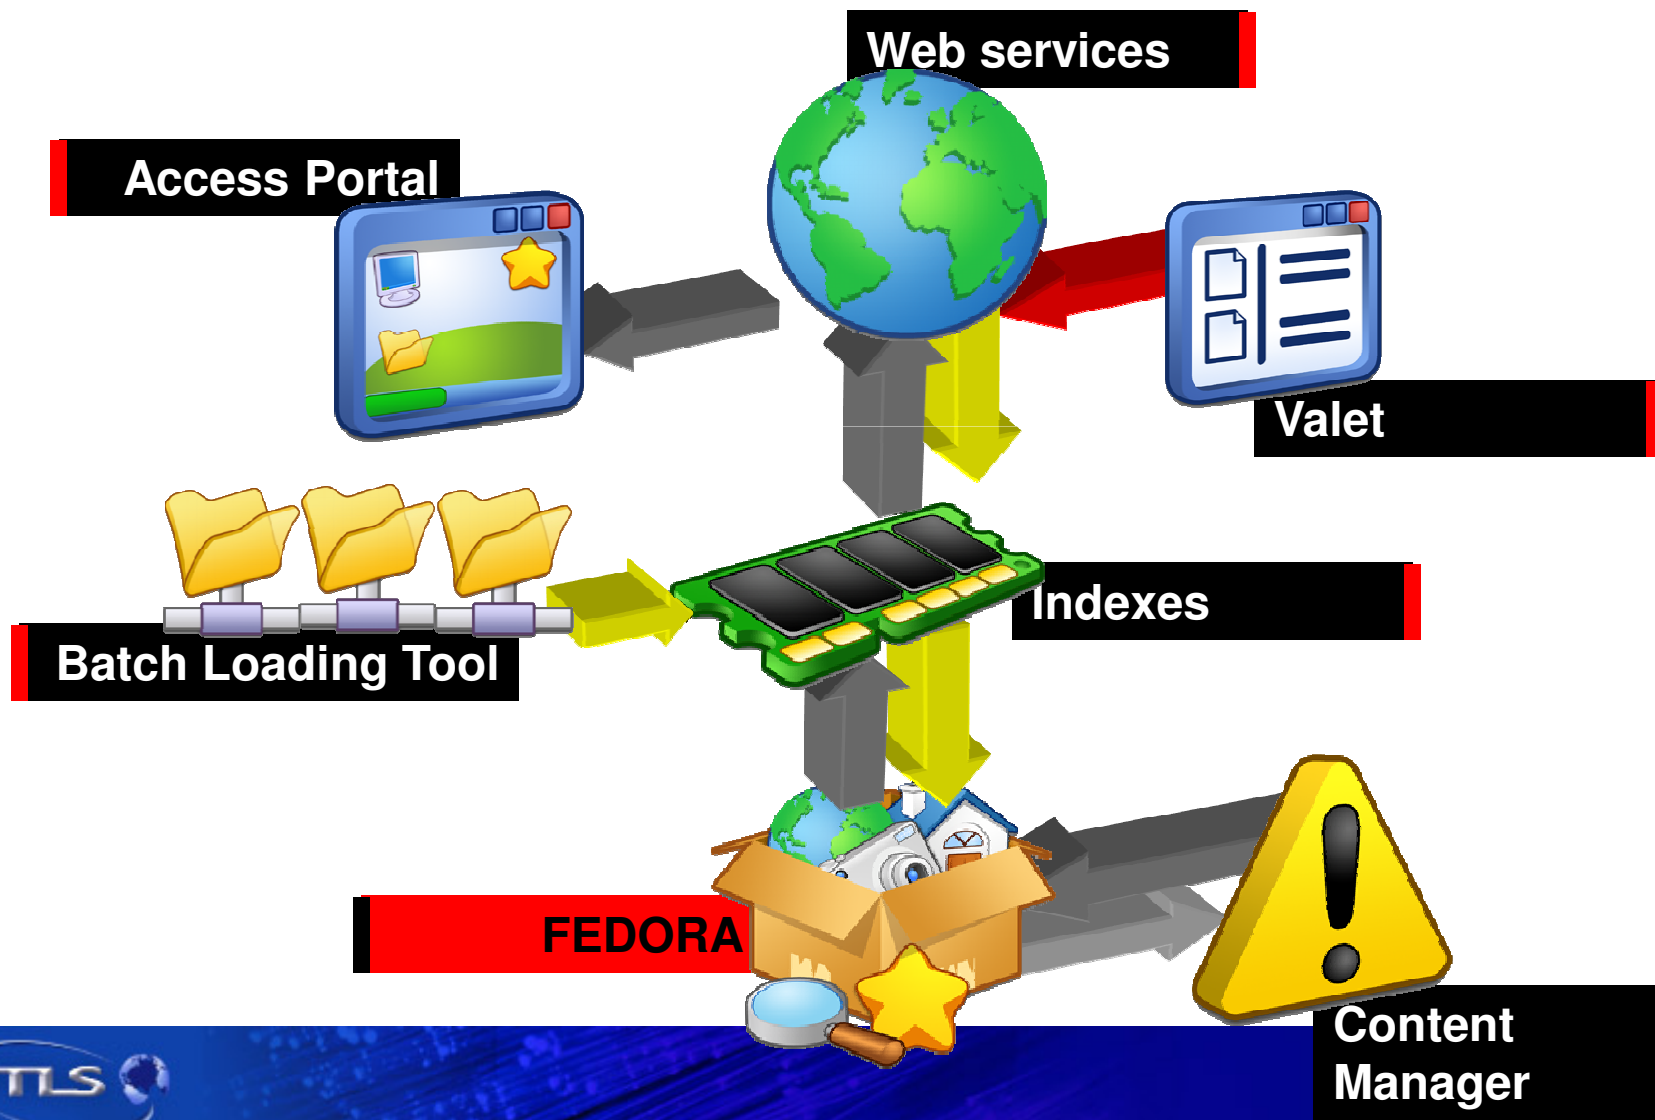

**Fedora™
Repository**

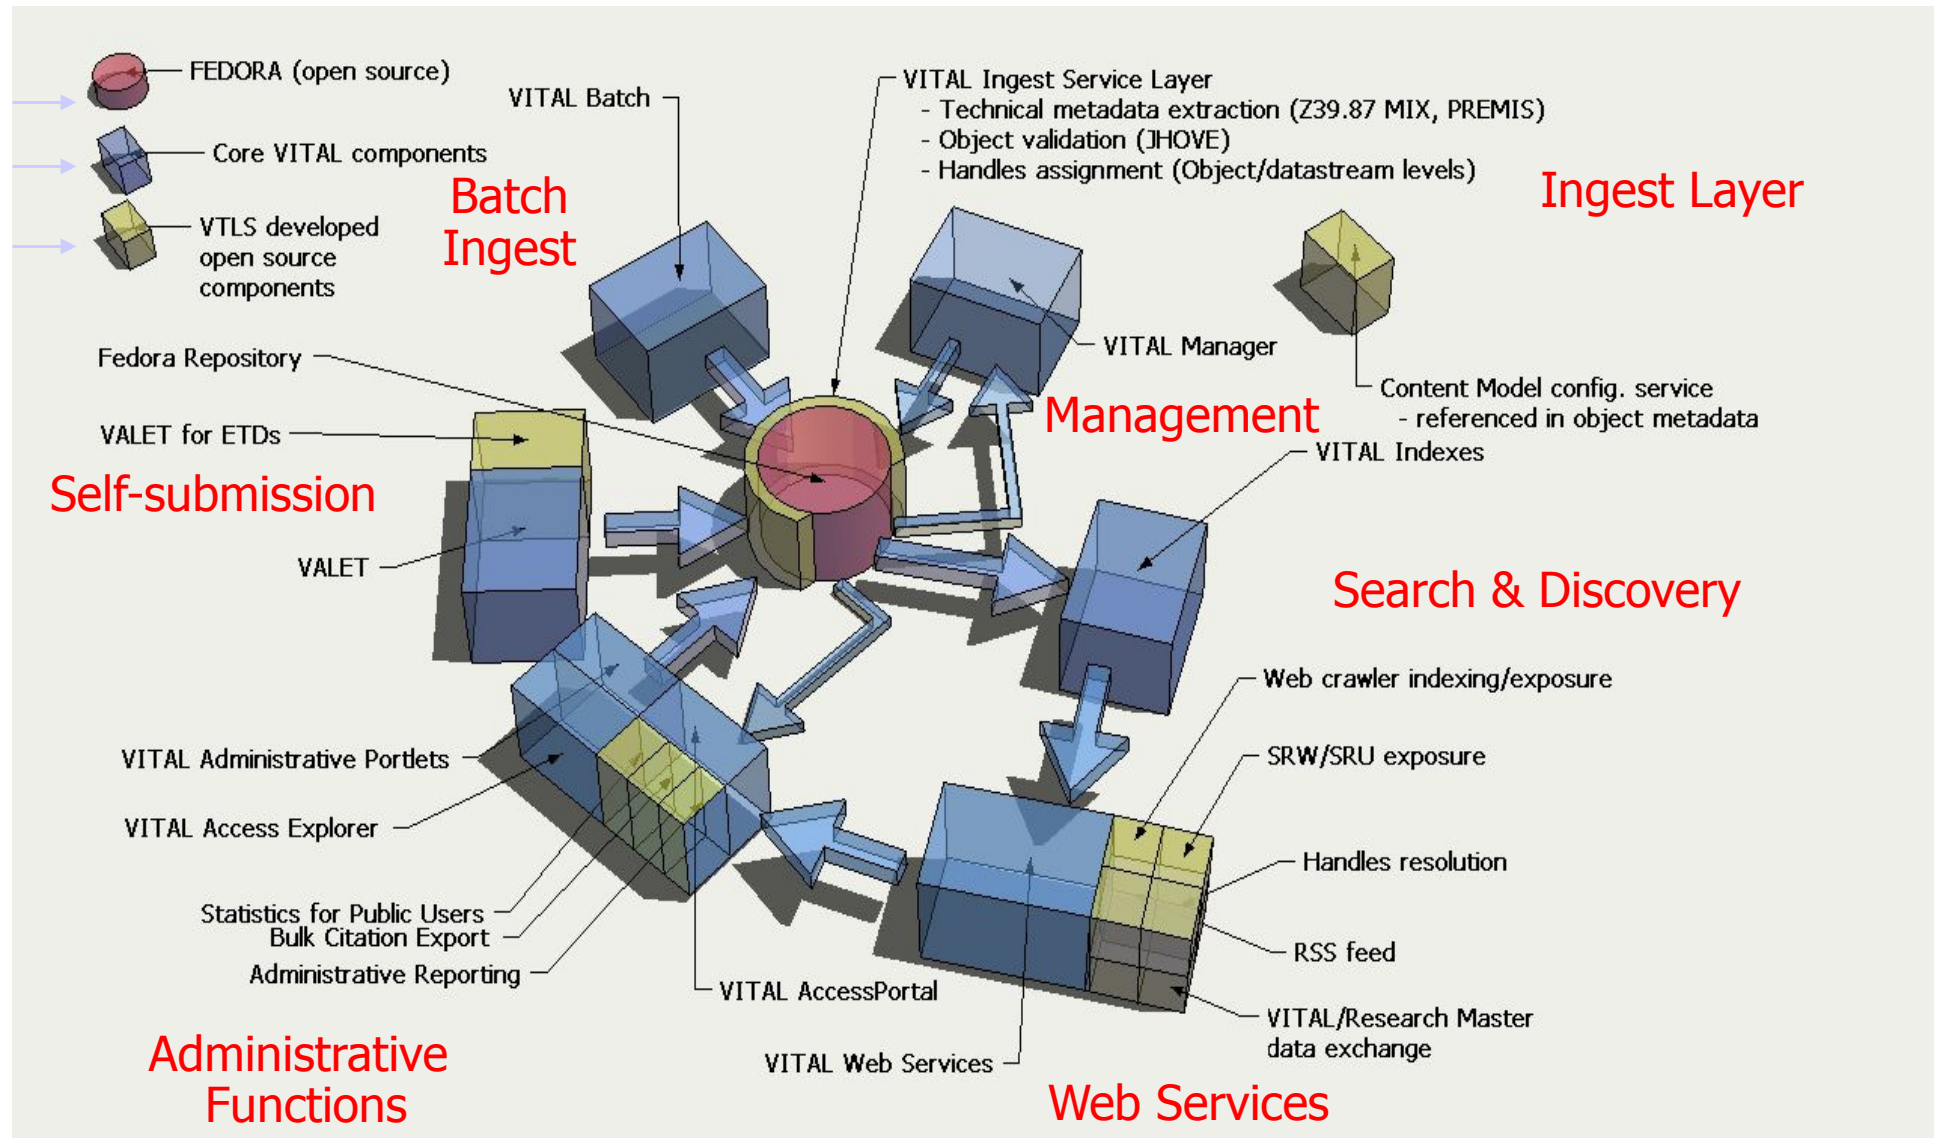

Web Service Exposure Layer

VITAL Fedora™ Relationship

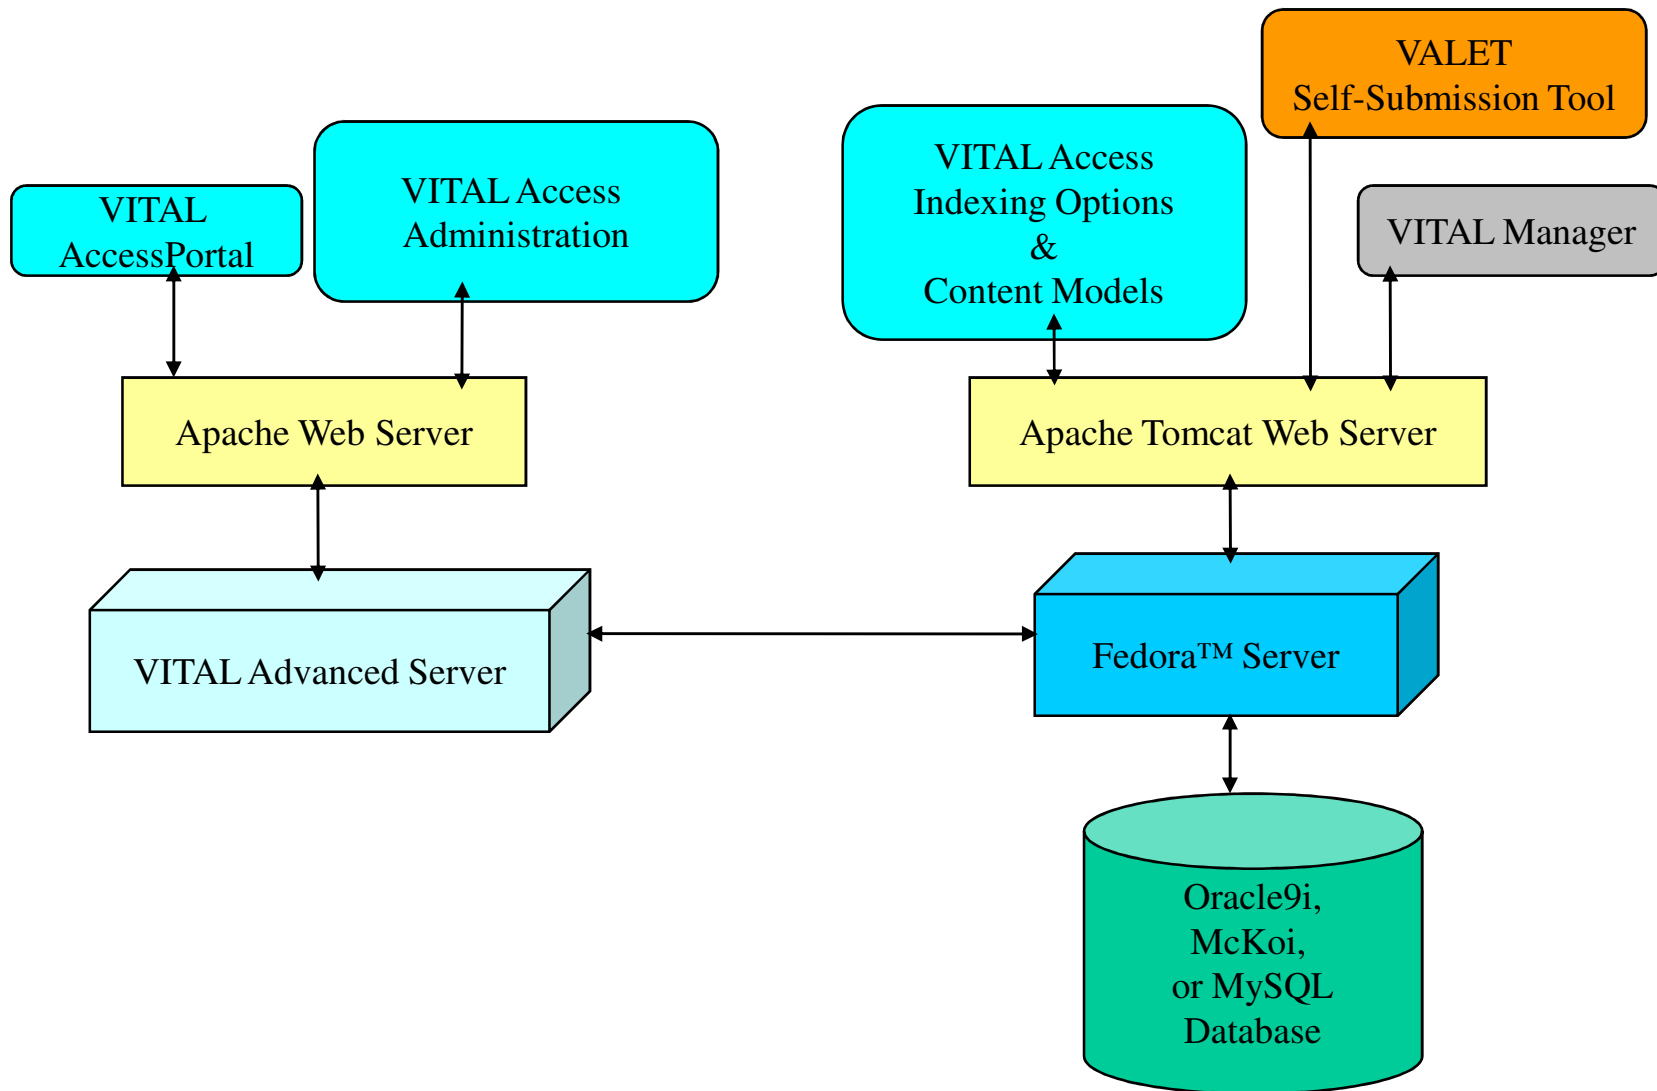

The VTLS VITAL Architecture

How VITAL works with Fedora™?

- Workflow tools that simplify the creation, modification, submission and dissemination of digital objects
- Web Service Interfaces (API's)
- Management Service (API-M)
 - Ingest – XML-encoded object submission
 - Create – interactive object creation via API request
 - Maintain – interactive object modification via API requests
 - Validate – application of integrity rules to objects
 - Identify – generate unique object identifiers
 - Security – authentication and access control
 - Preserve – automatic content versioning and audit trail
 - Export – XML-encoded object formats

VITAL Components

VITAL Component - Details

- VITAL Manager
- VITAL AccessPortal web portal delivering content online, including
 - Hi-Resolution Image Navigator for JPEG2000 and MrSID
 - Document Navigator supporting document and image collections
- VITAL Administration
- VALET - Web Self-Submission Tool
- VTLS Batch Loader Tool
- Handles Server (CNRI)
- SRU / SRW Support

VITAL's Added Value

- Indexing Capabilities
- UIs
- Special viewers
- Default cataloging templates
- Default style sheets (EAD, MARCXML...)

VITAL's Added Value...

- Multilingual UI
- UNICODE compliance
- Support for dynamic creation/export of content citations (EndNote, text...)
- Training
- Documentation
- Support

VITAL's Added Value...

- SRU enabled
- Exposure to search engines (Google, Yahoo...)
- Handles Server (automatic)
- Easy handling of collections

VITAL's Added Value - Viewers

Image Navigator

- High resolution viewer
- JPEG2000
- MrSID

Document Navigator

- Multi-page objects

VITAL's Added Value - Interfaces

- Content Manager
- Public Access Portal
- Admin Access Portal
- VALET
- VTLS Batch Loader Tool

Public Access Portal

- Web-based
- Sophisticated search techniques
- Exposure using 'facets'
- Hierarchical retrieving
- Sorting
- Viewing
- Thumbnails, magnified viewing areas...

Admin Access Portal

- To manage objects
- To import objects into repository
- Search
- Preview
- Modify
- Admin tools for content management
- Interactive / modify indexes
- Define content models for objects

VITAL vs. Pure Open Source

● Why not go pure open source?

- Open source is not “free”.
 - Institutions carry the cost of personnel to do what the commercial vendor is offering:
 - implementation
 - support
 - documentation
 - quality assurance testing
 - training &
 - development
 - These highly trained staff quickly become valuable in the marketplace!
- The reason to use a commercial vendor is because they offer these services at a lower cost to the institution!
- Support -- around the clock, seven days a week.
- Long range development plans, not just institution specific but also profession specific.
- Sustainability of the total solution -- backed by VTLS.

VITAL vs. Pure Open Source

- Staffing that VTLS has in place:

- Project Manager = 1

- Product Manager = 1

- QC Tester = 1

- Training/CS = 2

- Programming = 4

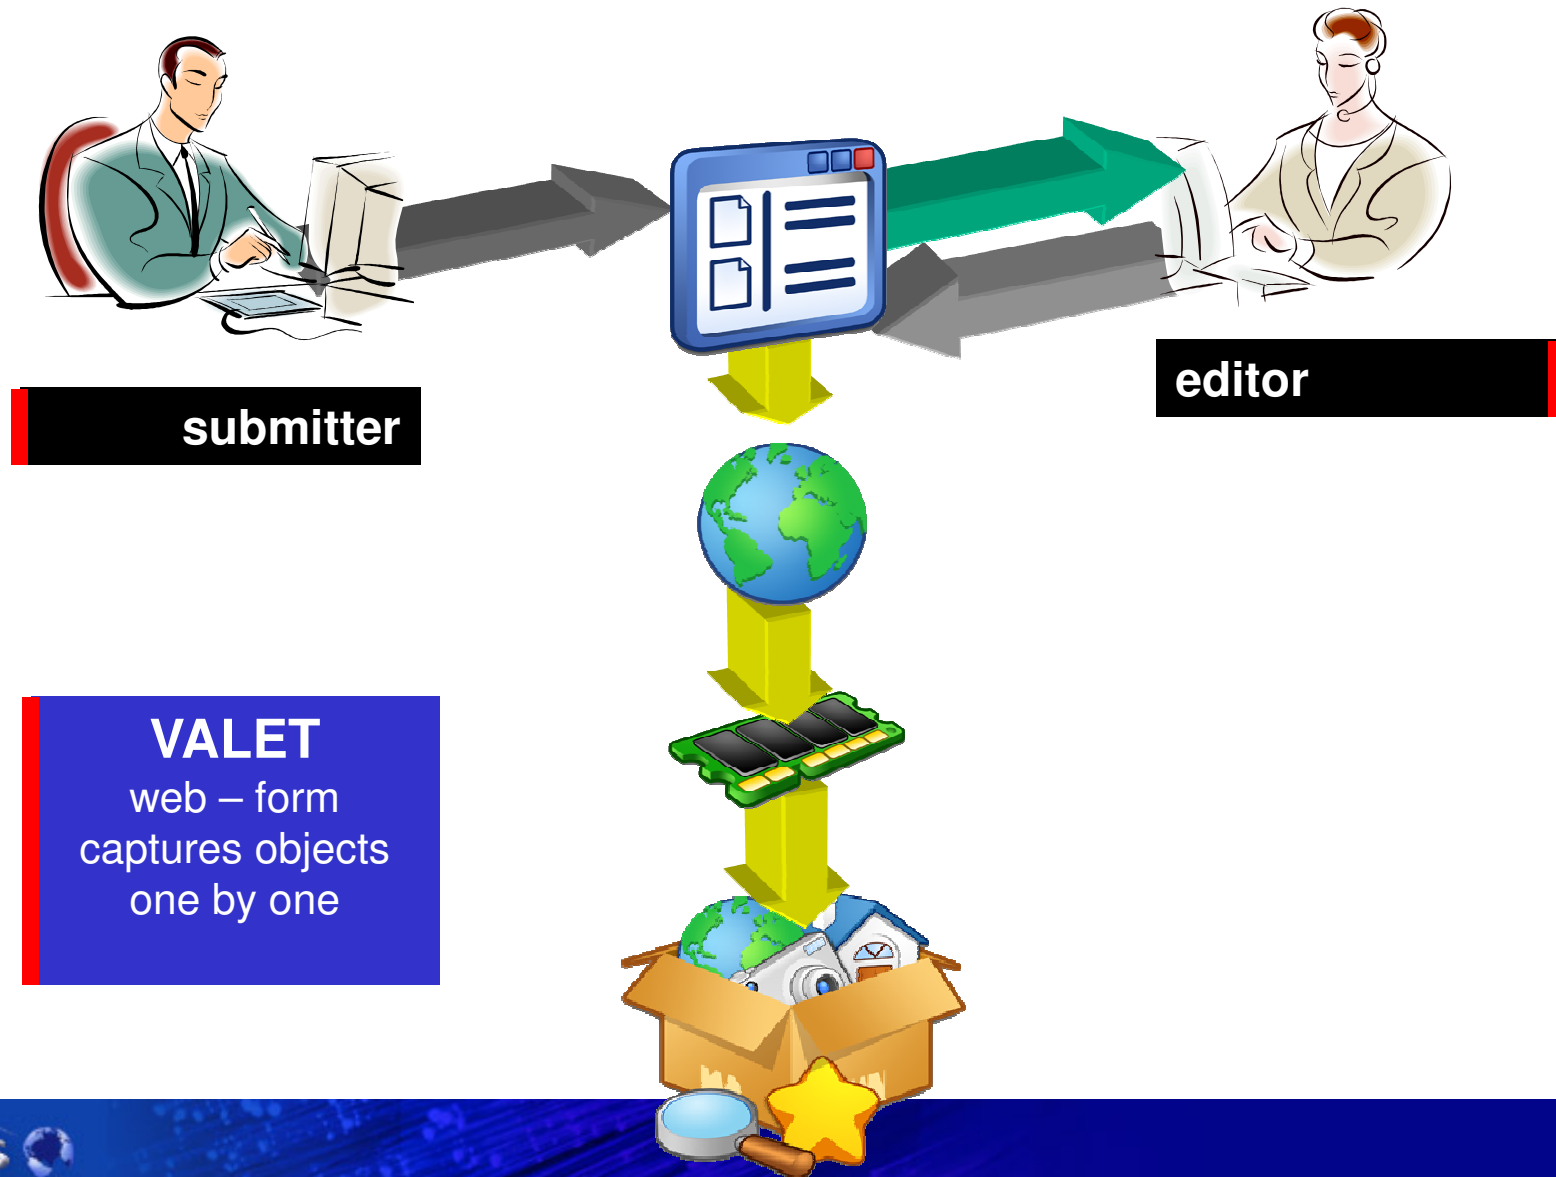

- Total = 9

- Why duplicate costs when you can share them?

Ingesting using VALET

Ingesting using VALET

- Customizable, web-based UI
- For users to submit content into repository
- Handle submission of any file format
- Allows contributors to enter metadata into configurable, form-based templates
- Allow for a staged submission process
 - ✦ Review, edit, delete, approve submitted content prior to ingest

Pre-configured templates :

- Electronic Theses and Dissertations
- Journal Articles
- Working Papers
- Book Chapters
- Conference Papers
- Images

Others per user needs...

- Offers pre-configured metadata mappings into MARCXML and Dublin Core formats
- Is fully interoperable with VITAL for:
 - Managing submitted content
 - Automatic indexing of submitted content
 - Formatted display of EAD, TEI, MODS, MARCXML
 - Assigning Handles
 - Server-side full-text extraction of PDFs and other text files submitted, providing anywhere keyword searches

VALET for ETDs

Example of another
Open Source Software from VTLS

VALET for ETDs

- A subset of VALET - supplied with VITAL
- A complete standalone application
- Bundled with Fedora™
- Is a free, open-source solution for web self-submission of ETD

VITAL – Fedora Plans Coordinate

- VTLS staff/customers are active in Fedora community:
 - Advisory Group
 - Development Group
- Coordinating development of content models
- VITAL builds on XACML features of Fedora™
- Work to minimize overlap and maximize coordination
- VTLS contributes back open source components
- Charlottesville is down the road from Blacksburg

VITAL/FEDORA Platform

● Server

- LINUX or SOLARIS
- Databases
 - MySQL (recommended)
 - McKoi
 - Oracle or Oracle XE

● Client PC

- Windows

● Browser

- IE
- Firefox

Key Features/Benefits to VITAL (1)

- Storage and management of any content format, including rich-media
- Integration with existing systems through open, standards-based protocols
- Search full-text content (PDF, DOC, RTF etc.)
- Display high resolution imagery, multi-page documents and specialized data formats (MARC, EAD, TEI, etc.)
- Automatically capture preservation metadata and create long-term, citable DOIs

Key Features/Benefits to VITAL (2)

- Storage of content in native XML provides support/validation against any metadata schema
- Support for aggregation of like-content in collections
- Automatic metadata extraction and validation (facilitates preservation)
- Web-crawler indexing and exposure (Google, etc.)
- Language support and UNICODE compliance
- Support for custom index creation for resource discovery
- SRU Interface for exposure of repository content

Key Features/Benefits to VITAL (3)

- Tracking content changes through versioning
- Robust facilities for batch ingest of content
- Support for link resolving against an institution's OpenURL server
- Support for dynamic creation/export of content citations (EndNote, text)
- Facilities for web-based self-submission of diverse content types (VALET)
- Integration with Fedora™ repository architecture allows for extensibility

Who is using VITAL?

- Over 30 Institutions worldwide; more coming
- In Australia: Australian Research Repositories Online to the World (ARROW)
 - 16 Institutions in Australia including Monash University
 - Both ARROW and RUBRIC projects are using VITAL
- In USA
 - Duke Medical Library; VCOM; Mary Washington; Columbia University (CIESEN), Virginia Tech
- In Europe
 - UK: National Library of Wales
 - Greece: National Theatre; Athens Archaeological Society
 - Belgium: UCL
 - Slovakia: National Library
- In ME and Asia
 - National Library of Singapore; KISR
 - Pakistan Medical Research Council

VITAL - What are you getting?

- A solution that:

- Benefits from the pluses of Open Source, but not the negatives.
- Openly and visibly demonstrates support for the Open Source movement.
- Supported by a commercial vendor who:
 - contributes back to the FEDORA open source solution (as a result of our customer partnerships).
 - Works exclusively with libraries, is run by a librarian and is helping to define the future of libraries

VITAL - What are you getting?

- A product that builds on top of the open source foundation, a product that provides:
 - VITAL Manager
 - VITAL Portal
 - VALET - Web Self-Submission Tool
 - VTLS Batch Loader Tool
 - Handles Server (CNRI)
 - Google Indexing and Exposure
 - SRU / SRW Support
- Most importantly:
 - Flexibility
 - Service
 - Support
 - Sustainability!

VITAL - What are you getting?

- Making your repository successful - working on an agreement that will:
 - Provide a method to link your VITAL repository to bio pages for staff & faculty of your institution.
 - Allow you to “prime” your repository by loading metadata for works published by your staff and faculty.
 - In some instances, depending upon licenses, allow loading of published papers & works.
 - Provide a connection to a citation formatting tool that supporting 100’s of formats.
- Value provided by working with a commercial library vendor!

VITAL - What are you getting?

You support a concept, product and vendor that:

- Believes that Open Source options offer lower cost solutions for libraries
- Actively supports the Open Source movement
- Contributes back to the FEDORA open source solution
- Provides support, training, documentation & hosting services

VITAL - What are you getting?

VITAL Services

- New versions containing:
 - Enhancements
 - Bug fixes
- Documentation
- Training
- 24x7 emergency support
- Email and telephone support
- A community of users and experts

VITAL - What are you getting?

Shifts in IT

- When hardware was "king" - 1960s to early 80s
- When software was the "ruler" - 80s and 90s
- Now service is the "key" - 2000s

Most importantly:

- Service
- Support
- Sustainability!

ISUALIZER

VTLS VISUALIZER

- What is it?
- Why choose Visualizer?
- Potential uses

The screenshot shows the VTLS Visualizer search results page for the query "Technology". The page displays a list of 14,440 matching items, sorted by publication date (newest first). The top results are:

- I have a weird brother who digested a fly** by Holub, Joan. Published in 1999. Keywords: Digestion Juvenile literature. Language: English. Format: Language material. Audience: Juvenile. ISBN: 0807535060 (hardcover).
- Nursing research** by Houser, Janet. Published in 2008. Keywords: Nursing Research Evidence-based nursing Clinical Nursing Research methods Evidence-Based Medicine Research Design. Language: English. Format: Language material. ISBN: 9780763742676 (alk. paper).
- NCLEX-RN review** by Hoyson, Patricia McLean. Published in 2008. Keywords: Nursing Examinations, questions, etc National Council Licensure Examination for Registered Nurses. Language: English. Format: Language material.
- Nursing care planning made incredibly easy**. Published in 2008. Keywords: Nursing care plans Nursing Planning Nursing diagnosis Nursing Process Patient Care Planning. Language: English. Format: Language material. ISBN: 978158255539 (alk. paper).
- Understanding business** by Nickels, William G. Published in 2008.

The left sidebar shows the Dewey Classification breakdown for the search results:

Dewey Classification	Count
Medical sciences; Medicine	5568
Home economics & family living	2084
Engineering & allied operations	2083
Management & auxiliary services	1952
Agriculture	1704
Manufacture for specific uses	294
Buildings	276
Chemical engineering	209
Technology (Applied sciences)	178
Manufacturing	93
Economics	2
Biography, genealogy, insignia	1
Geography & travel	1
Public administration	1
Dewey Classification Social sciences	3

What is Visualizer?

- Next generation OPAC
- Offers users a unified interface for searching or discovering content
- Allows faceted browsing as well as traditional keyword search
- Makes direct links to source content - (iPortal or Chamo for Virtua, VITAL repository, etc)
- Collocate information while providing branding [consortia, university departments, etc.]

Discovery Tools -- What is Discovery

Discovery is **finding** something you need **without knowing exactly what you are looking for!**

Requires the following capabilities

- Systems “exposes” its content
- System is iterative – good navigation
- System has no “dead-ends”
- System aggregates information – drill down
- System shows contents in “graphical format”
- System is fast (because of iterative use)
- System requires no training – discovery!!
