ABOUT US

LOYOLA MARYMOUNT UNIVERSITY

LMU is a private Catholic university with 6,250 undergraduates, 2,150 graduate students and 1,100 law students from diverse backgrounds and many perspectives. Our seven colleges and schools boast best-in-the-nation programs in film and television, business, education and more. Our stunning campus in West Los Angeles is a sun-soaked oasis overlooking the Pacific coast and a model of sustainability. We're rooted in the heart of Los Angeles, a global capital for arts an entertainment, innovation and technology, business and entrepreneurship. Our mission is grounded in a centuries-old Jesuit educational tradition that produces extraordinary men and women dedicated to service and social justice. We're proud of more than 92,000 LMU alumni whose professional achievements are matched by a deep commitment to improving the lives of others. For more LMU news and events, please visit www.lmu.edu/news.

The Thomas and Dorothy Leavey Center for the Study of Los Angeles (StudyLA) at Loyola Marymount University is one of the leading undergraduate research centers in the nation. We are a respected leader in public opinion surveys, exit polling, and leadership and community studies. Founded in 1996, StudyLA conducts groundbreaking research through its LA Votes exit poll project, LA Riots Anniversary Studies, and LA Public Opinion and Leaders Surveys. We provide rigorous, mentored research experiences for undergraduate students at Loyola Marymount University with an emphasis on hands-on field research. As the preamble to the LMU mission states, "We benefit from our location in Los Angeles, a dynamic city that brings into sharp focus the issues of our time and provides an ideal context for study, research, creative work, and active engagement. We invite men and women diverse in talents, interests, and cultural backgrounds to enrich our educational community." StudyLA brings this mission alive, taking pride in our work's emphasis on understanding and communicating the issues of our time.

For more information about the results or methodology from this or other datasets from the Center for the Study of Los Angeles, please contact Brienne Gilbert, Associate Director, at brienne.gilbert@lmu.edu.

ABOUT THIS STUDY

The COVID-19 Survey conducted by StudyLA involved 15-minute telephone sessions and online surveys with 2,000 adults living in Los Angeles County (1,000 in the city of Los Angeles and 1,000 in the rest of LA County). The survey was conducted in both English and Spanish from March 23rd to April 8th, and respondents were asked a range of questions concerning the COVID-19 pandemic.

ABOUT THIS REPORT

Survey results are presented in two sections: (1) toplines, or total responses for each question, and (2) crosstabs, or all questions crossed by major demographics. The margin of error for the final sample of 2,000 respondents is $\pm 2\%$.

RECOMMENDED CITATION

Gilbert, Brienne; Guerra, Fernando J.; Vizireanu, Mariya; Dunsker, Max; & Akella, Vishnu (2020). COVID-19 Data Brief: 2020 COVID-19 Public Opinion Survey. Thomas and Dorothy Leavey Center for the Study of Los Angeles, Loyola Marymount University, Los Angeles, California.

Appendix

2020 COVID-19 SURVEY METHODOLOGY

In response to the COVID-19 pandemic, the Center for the Study of Los Angeles conducted a survey to assess LA County residents' opinions on the subject. The COVID-19 Survey involved 15-minute telephone sessions and online surveys with 2,000 adults (phone and online) living in Los Angeles County. Survey respondents were asked about their thoughts on the government's response to the outbreak, their understanding of the virus and the measures taken to curtail its spread, and their emotional and economic states during this pandemic.

SAMPLING

StudyLA conducted all aspects of survey development, the sampling plan, data processing (e.g., data cleaning and weighting), analysis, and dissemination of its findings. Throughout the data collection process, StudyLA worked closely with Interviewing Service of America (ISA Corp.) to oversee the successful implementation of the sampling plan. ISA Corp. is a data collection firm with a call center in Los Angeles County, ensuring that Angelenos were interviewed by other Angelenos.

Since the primary purpose of this study was to gather representative input from adult residents within the Los Angeles region, an initial random digit dial (RDD) sample was employed. The RDD sample was drawn by determining the active phone exchanges (the first three numbers of a seven-digit phone number) and blocks within a given sampling area (in this case, by the zip codes that comprise the county). A random list of all active residential and cell phone numbers in the area was produced. This method includes both listed and unlisted phone numbers. Listed samples were used to meet particular quotas for racial/ethnic categories and geographic location.

The online portion was comprised of responses from double opt-in respondents who have agreed to participate in surveys with ISA Corp.'s SoapBoxSample. SoapBoxSample uses a proprietary panel called MySoapBox that employs a variety of methodologies and recruitment channels (such as online, phone, and face-to-face) to ensure representative results. In addition, SoapBoxSample employs a large network of panel partners worldwide to achieve non-biased samples. Real-time sampling and survey publishing services were also used to target respondents outside of the initial reach. For all methods, adult respondents in LA County were targeted and then randomly selected within their group.

SCREENERS

The protocol for this study involved asking potential respondents a series of questions, referred to as screeners, which were used to ensure that the person lived within the county and was at least 18 years old. The target sample size was 1,000 residents from the city of Los Angeles and 1,000 residents from Los Angeles County who lived outside the city of LA. The first quota was a random digit dialing of approximately 550 residents. The online survey ran concurrently with a target sample size of 1000 respondents. The remaining racial/ethnic and geographic quotas were determined based on the fallout: 350 African American residents and 275 Asian residents. Given the demographic proportion of Latina/o and white residents in the region, as expected, both groups naturally fell out from the initial wave of online and phone respondents.

DATA COLLECTION

Phone surveys were conducted from March 23, 2020 till April 8, 2020 between the hours of 4:30pm and 9pm during the week, 10am to 4pm on Saturday, and 12am to 5pm on Sunday. The survey was translated into Spanish and translators who speak Spanish were available to conduct interviews for residents who only spoke, or were more comfortable speaking the language.

The online survey ran concurrent with the phone survey and was available in both English and Spanish. The margin of error is $\pm 2.0\%$ for the entire sample of 2000 residents, not adjusted for weighting or design effects. The 2000 responses collected for this survey were weighted based on respondents' self-identified racial and ethnic group, gender, age, and geographic location matching them to the most recently available population parameters from the American Community Survey (ACS) estimates.

SURVEY FUNDERS

As with all research projects at StudyLA, funding for this project came from a variety of donors (including the university's own internal funds) throughout the year. Donors are not involved in any aspect of project design and data dissemination. All StudyLA funders are aware that their donations can be applied to any one of the numerous research projects StudyLA conducts. To find out more about StudyLA's funders visit www.lmu.edu/studyLA.
