RESUME

Ce troisième recueil présente les données de sels nutritifs, oxygène dissous, chlorophylle, phytoplancton et zooplancton obtenues deux fois par an lors de la radiale SURTROPAC, de 20°S à 10°N le long de 165°E. Les campagnes couvrent la période comprise entre mars 91 (SURTROPAC 14) et août 92 (SURTROPAC 17). Les données sont présentées sous forme de coupes 20°S -10°N et sous forme de tableaux.

ABSTRACT

Title : PROPPAC Program : Hydrology, nutrients, chlorophyll, phytoplankton and zooplankton during SURTROPAC 14 to 17 cruises (1991 - 1992)

Data of nutrients, dissolved oxygen, chlorophyll, phytoplankton and zooplankton are presented in the present and last report, and deal with a biannual transect, SURTROPAC, made from 20°S to 10°N along 165°E between March 1991 (SURTROPAC 14) and August 1992 (SURTROPAC 17). Data are presented on diagrams (latitude-depth) and tables.

Campagnes SURTROPAC 1984-1992

N.O. Le Coriolis, le Noroit, le Suroit

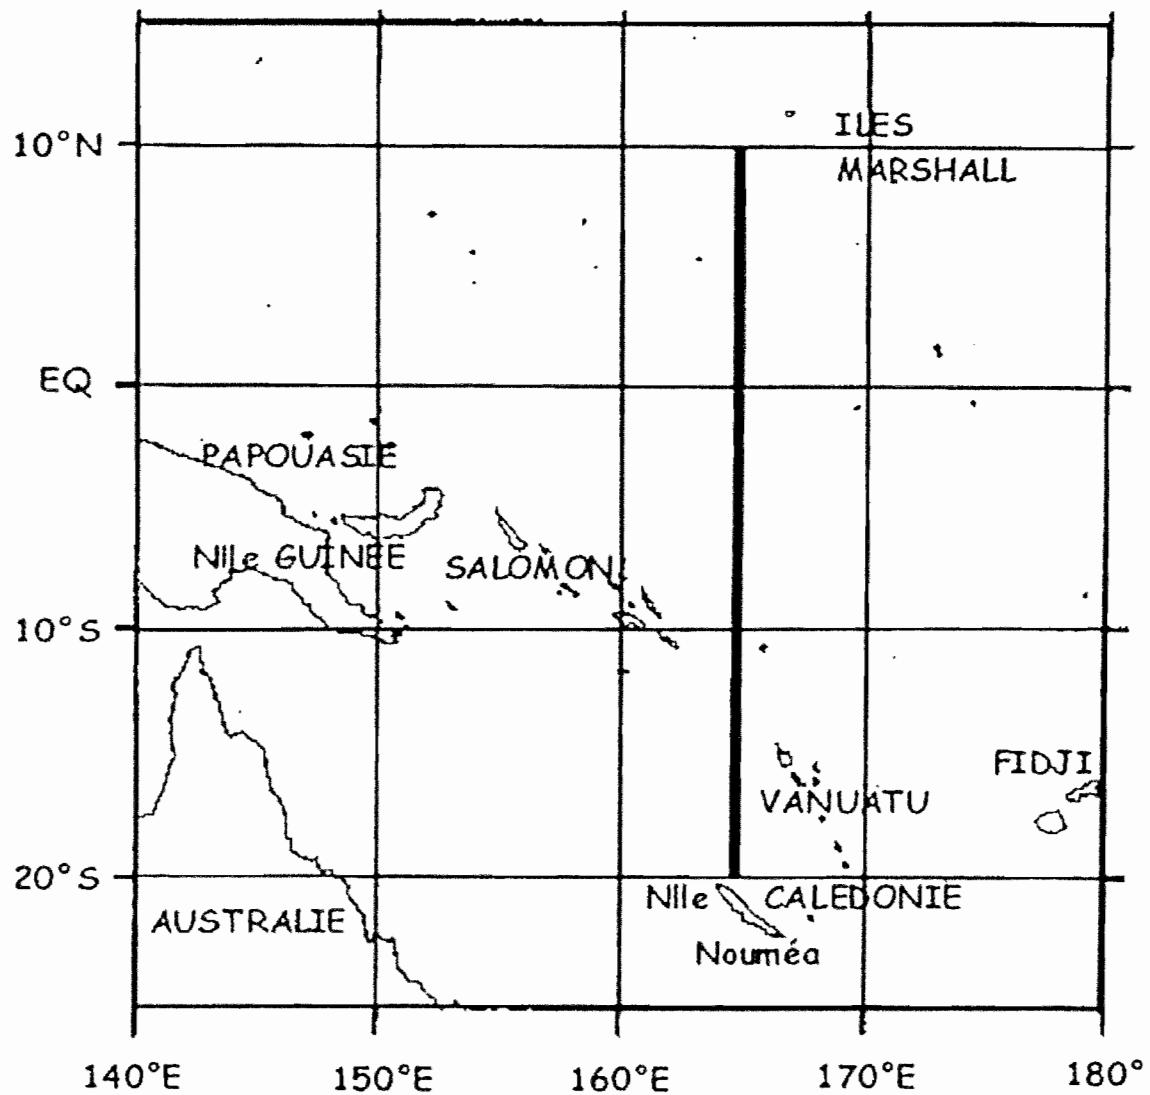

Figure 1: Tracé des radiales SURTROPAC dans le Pacifique sud-ouest

I. INTRODUCTION.

Les campagnes SURTROPAC du Groupe SURTROPAC de l'ORSTOM Nouméa, qui se sont terminées en 1992, ont fait partie du programme international TOGA (Tropical Ocean and Global Atmosphere). Leur objectif était de mesurer les transports de masse et d'énergie par le système des courants équatoriaux, d'étudier leur variabilité et leurs mécanismes.

Les campagnes bisannuelles SUPTROPAC comportaient également une participation du programme PROPPAC de l'ORSTOM Nouméa , dont le thème général était l'étude des relations liant l'hydrologie et la biomasse/production planctonique dans le Pacifique occidental. Cette participation consistait en une série de mesures chimiques et biologiques en stations comportant:

- * Des analyses d'oxygène dissous, de sels nutritifs et de chlorophylle, à partir de prélèvements d'échantillons à 12/13 niveaux à l'aide de la rosette.
- * Des analyses de phytoplancton également , à partir de prélèvements d'échantillons à 12/13 niveaux à l'aide de la rosette, ceci seulement pour la campagne SURTROPAC17.
- * Des mesures de la biomasse et de la composition planctoniques à partir de traits de filets verticaux (0-500m).

Ces mesures venaient en complément du programme de physique en station, comprenant des mesures de salinité (pour étalonnage de la sonde) à partir des prélèvements à la rosette, des profils de température, salinité et oxygène dissous par bathysonde, et des profils de courant par la technique de l'ADCP.

Le but de ce rapport est de présenter les résultats de mesures hydrologiques, chimiques, et biologiques, obtenus à partir des prélèvements à la rosette et au filet à plancton, au cours des quatre dernières radiales SURTROPAC (campagnes SURTROPAC 14 à 17) ayant eu lieu entre 1991 et 1992. Les résultats sont présentés sous forme de tableaux de données et de tracés. Il fait suite aux deux fascicules (Gérard, 1986; Bonnet et al., 1990) relatifs aux treize premières campagnes de la période 1984-1989 (campagnes SURTROPAC 01 à 13).

L'ensemble des données physiques a déjà été publié par le groupe SURTROPAC (Delcroix et al., 1991; Rual et al., 1993; Picaut et al., 1993; Du Penhoat et al., 1993).

II - PLAN, DATES ET DEROULEMENT DES CAMPAGNES.

Les 4 campagnes SURTROPAC se sont déroulées le long du méridien 165°E, entre 20°S et 10°N (*Figure 1*), à bord du navire océanographique le NOROIT.

Tableau 1 : Dates des campagnes SURTROPAC de la période 1991-1992

No	DATES DES CAMPAGNES
14	11 Mars - 08 Avril 91
15	18 Juillet - 15 Août 91
16	19 Janvier - 17 Février 92
17	05 Août 92 - 02 Septembre 92

Les stations ont été effectuées tous les degrés de latitude et, lors de certaines campagnes, tous les demi-degrés dans la zone équatoriale. La limite nord de la radiale ainsi que le nombre de stations varient selon les campagnes. Ci-après (*Tableau 2*), la liste et la position des stations hydrologiques avec trait de sonde et prélèvements à la rosette, effectués à l'aller (du sud au nord) et/ou au retour (du nord au sud).

Le plan ainsi que le déroulement complet des différentes campagnes sont décrits dans les rapports de missions et rapports scientifiques du groupe SURTROPAC (voir références bibliographiques en annexe)

III - MÉTHODES

1 - Hydrologie.

Une sonde CTDO Seabird (SBE 9) est utilisée pour mesurer pression, température, salinité et oxygène dissous, ainsi qu'une rosette General Oceanics modèle 1015-5 sur laquelle sont gréées 12 bouteilles de prélèvement Niskin de 5 litres. La sonde effectue 24 cycles de mesure par seconde, pendant la descente à environ 1 m/s. Les capteurs sont étalonnés tous les 6 mois par le constructeur. Le capteur d'oxygène est régulièrement contrôlé par des dosages d'oxygène dissous (méthode de Winkler, voir paragraphe III-3).

Les prélèvements à la bouteille sont effectués à la remontée, généralement entre 0 et 200m, à 12 niveaux différents. Certains prélèvements ont été réalisés lors de stations profondes (0-1000m ou 0-2000m) en vue d'un meilleur recalage des données oxygène de la sonde.

Les données de température et de salinité reportées dans les tableaux sont les données discrètes, mesurées par la sonde à la remontée et correspondant à chaque niveau de prélèvement à la rosette. Les coupes de température et de salinité présentées (0-200m et 0-400m) ont été tracées à partir des données de la sonde, enregistrées à la descente et moyennées tous les 5m.

Nota: 1/ Lors de SURTROPAC 14, les mesures d'oxygène de CTDO2 n'ont pas été corrigées par la méthode de Winkler.

2/ A partir de SURTROPAC 16, un prélèvement d'eau de surface a été effectué avec une bouteille de 1,7l, portant ainsi à 13 le nombre de niveaux de prélèvements.

2 - Sels nutritifs (nitrate + nitrite, phosphate)

Les sels nutritifs sont analysés, à bord, à l'aide d'un Autoanalyseur II Technicon. Le dosage est réalisé selon les méthodes classiques (Strickland et Parsons, 1972). La mesure du "nitrate + nitrite" à faible concentration (< 2 micromoles) a été faite selon la méthode d'analyse "haute sensibilité" décrite par Oudot et Montel (1988). La limite de détection de la mesure est de 0,050µM (méthode "classique") et 0,020µM (méthode "haute sensibilité"). Pour le phosphate, la limite est de l'ordre de 0,02µM.

3 - Oxygène dissous

L'oxygène dissous est déterminé par la méthode de titration de Winkler (Strickland et Parsons, 1972) à l'aide d'un dispositif Metrohm comprenant un Titroprocesseur 686 connecté à une burette automatique Dosimat 665. La précision théorique de la mesure en mer est de 0,005ml/l.

4 - Chlorophylle *a*

Des échantillons de 100 ml sont filtrés sur des filtres Whatman GF/F en fibre de verre ($\phi = 25$ mm) et immédiatement congelés à -20°C. Les mesures de chlorophylle sont effectuées au laboratoire à terre, selon la méthode au méthanol décrite par Herblard et al. (1985): échantillons extraits dans le méthanol à 95% pendant 15 à 90 minutes et analysés avec un fluorimètre Turner modèle 112 (étalonné avec de la chlorophylle *a* pure Sigma).

Des tests comparatifs ont permis de déterminer que la conservation des échantillons (< 1 mois) entraînait une perte de 10% de la chlorophylle.

5 - Phytoplancton

Au cours de SURTROPAC 17 la composition du phytoplancton a été déterminée en cytofluorimétrie, technique utilisée à bord du bateau sur des échantillons de 0,1ml. Le passage dans le cytomètre en flux FACScan (BECTON DICKINSON) s'est déroulé dans les deux heures qui suivaient le prélèvement. Le détail de la technique utilisée au cours de SURTROPAC 17, est décrit dans Blanchot et Rodier (1996). Les résultats sont donnés en nombre de cellules par millilitre (nb ml⁻¹)

6 - Biomasses de zooplancton.

Le poids sec et le poids sec sans cendre sont déterminés sur la fraction > 200 µm (après tamisage sur 2 mm) pour la colonne d'eau 0-500 m , selon les méthodes décrites par Le Borgne (1975). Le volume filtré par le filet triple 200 µm (WP 2, UNESCO, 1968) , opéré en traits verticaux, est mesuré avec deux débitmètres T.S.K La longueur de câble filée est corrigée pour atteindre la profondeur désirée, lorsque l'angle de câble est supérieur à 10°.

Les résultats de biomasse présentés sont rapportés soit à l'unité de volume (m³), soit à l'unité de surface (m²). Les numéros des traits sont précédés de WPv pour le filet WP 2 de 200 µm.

Nota : Il n'y a pas eu de prélèvements de zooplancton à SURTROPAC 15.

IV - ARCHIVAGE DES DONNEES

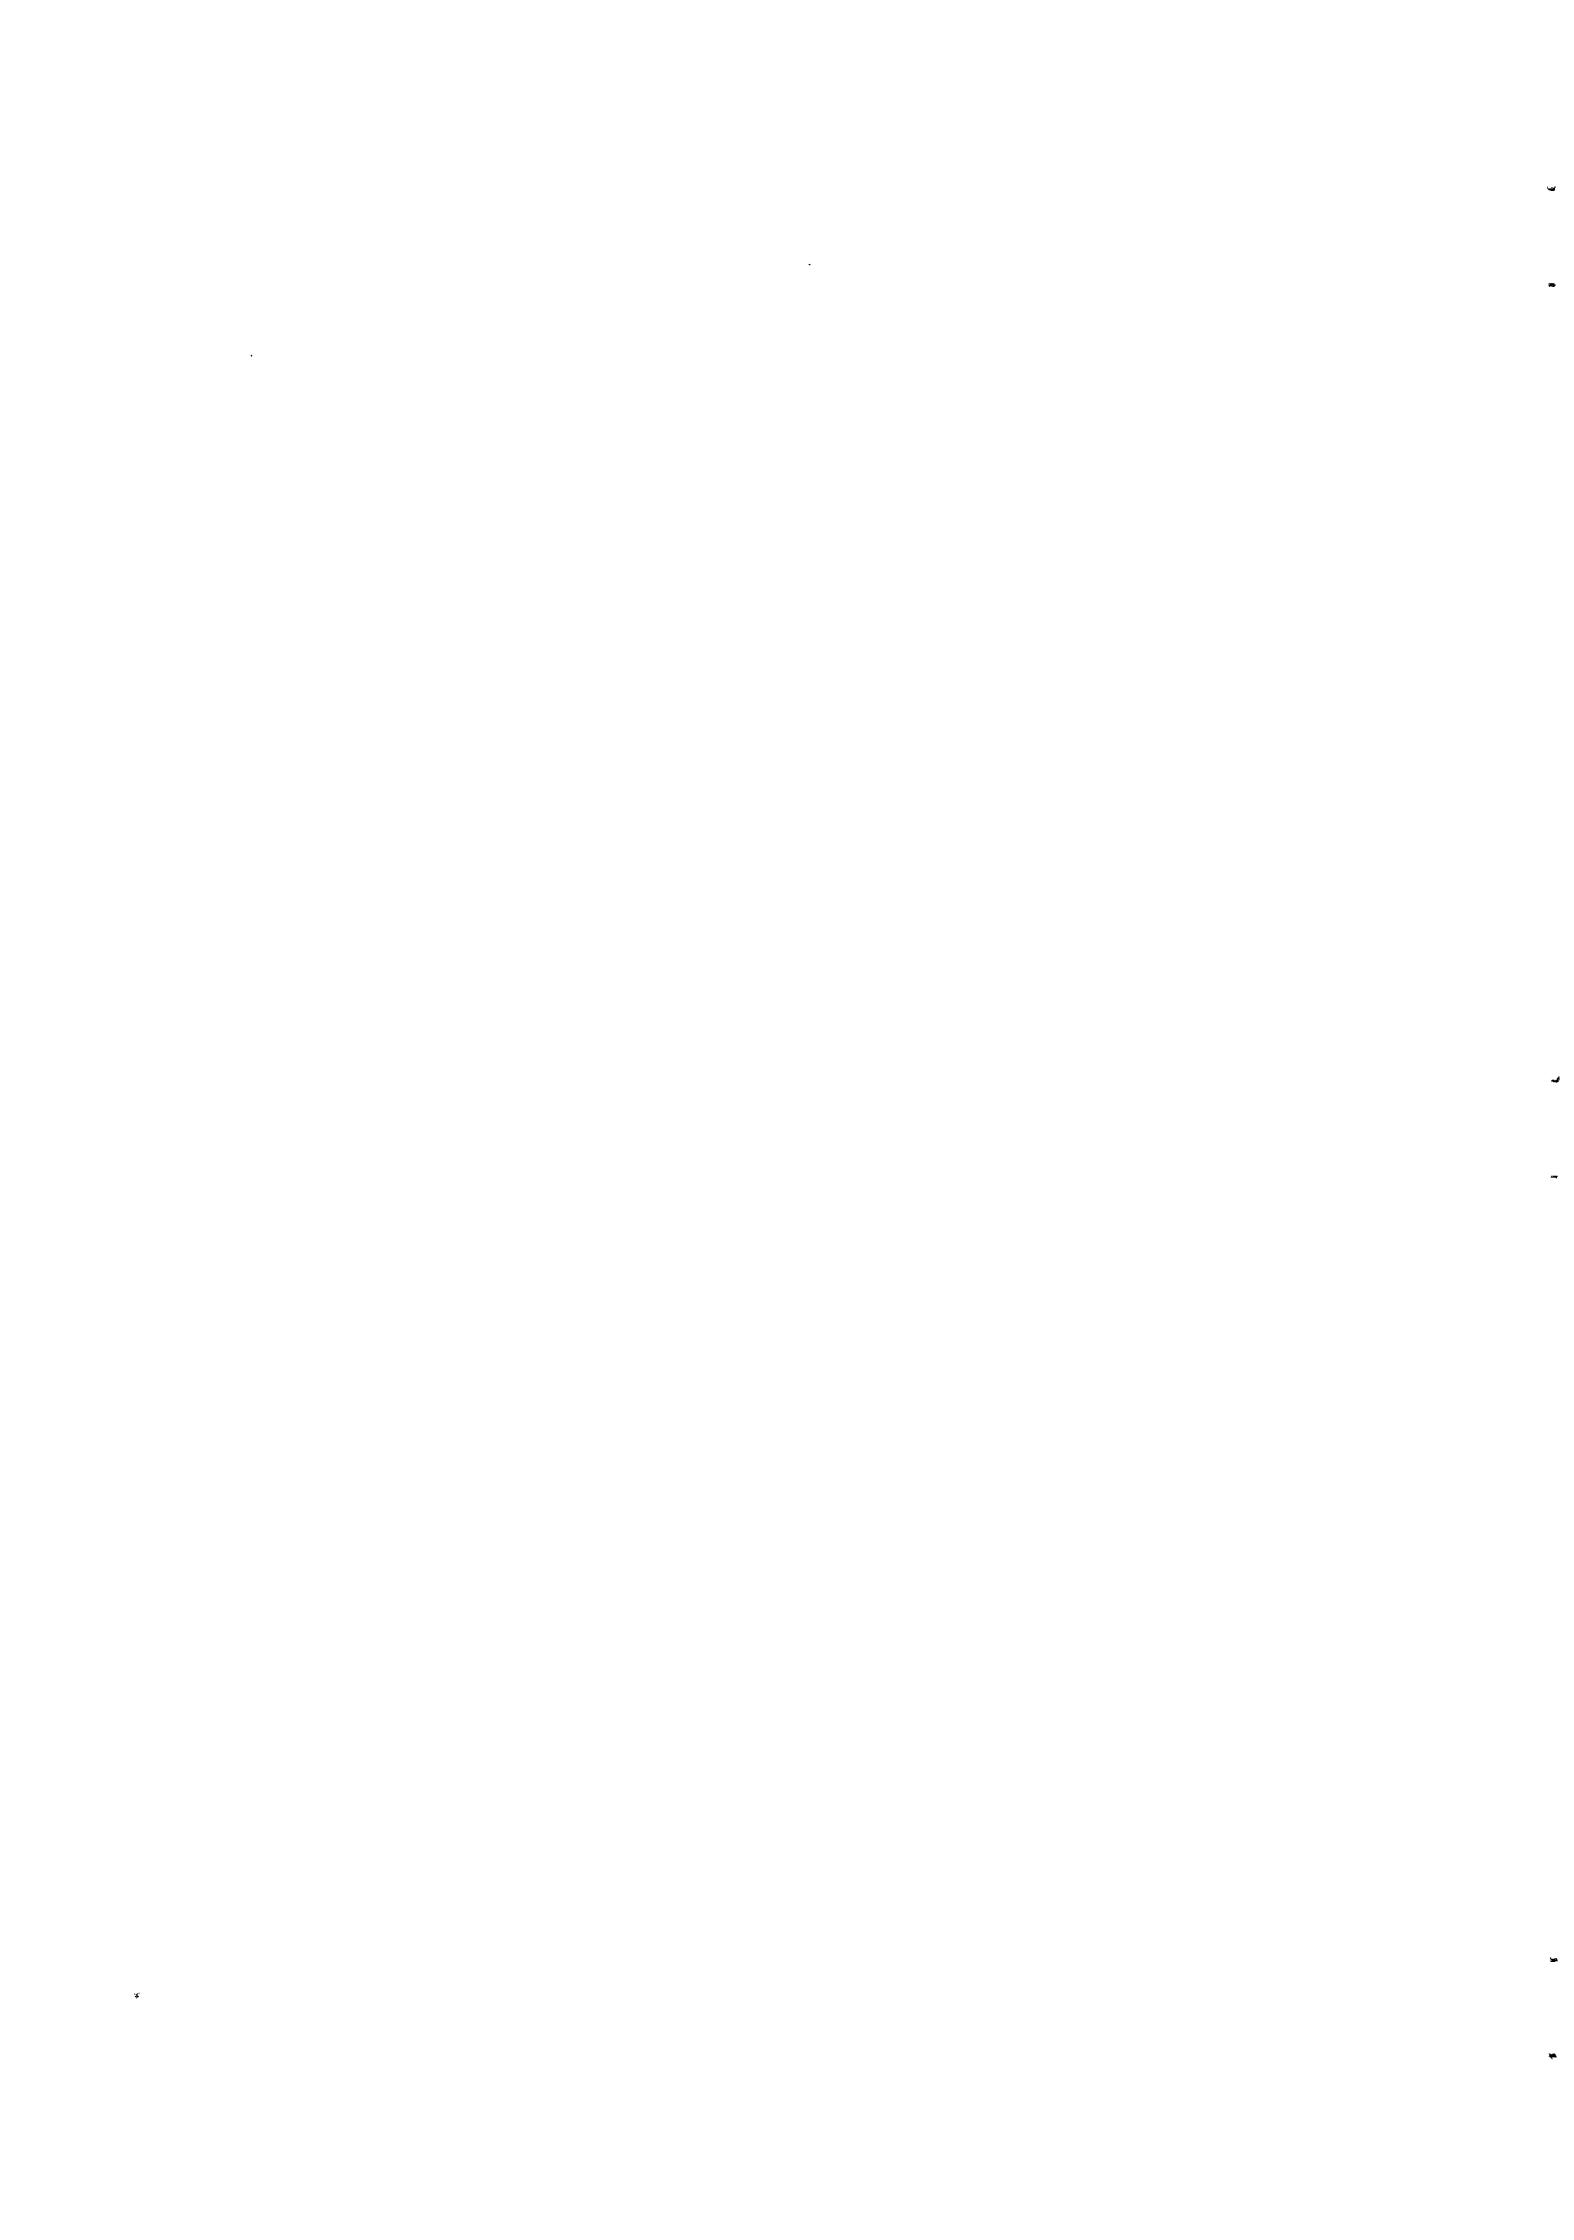

Les données sont archivées dans la banque de données Flupac actuellement (octobre 99) localisée à Marseille, sous support SUN.

Remerciements :

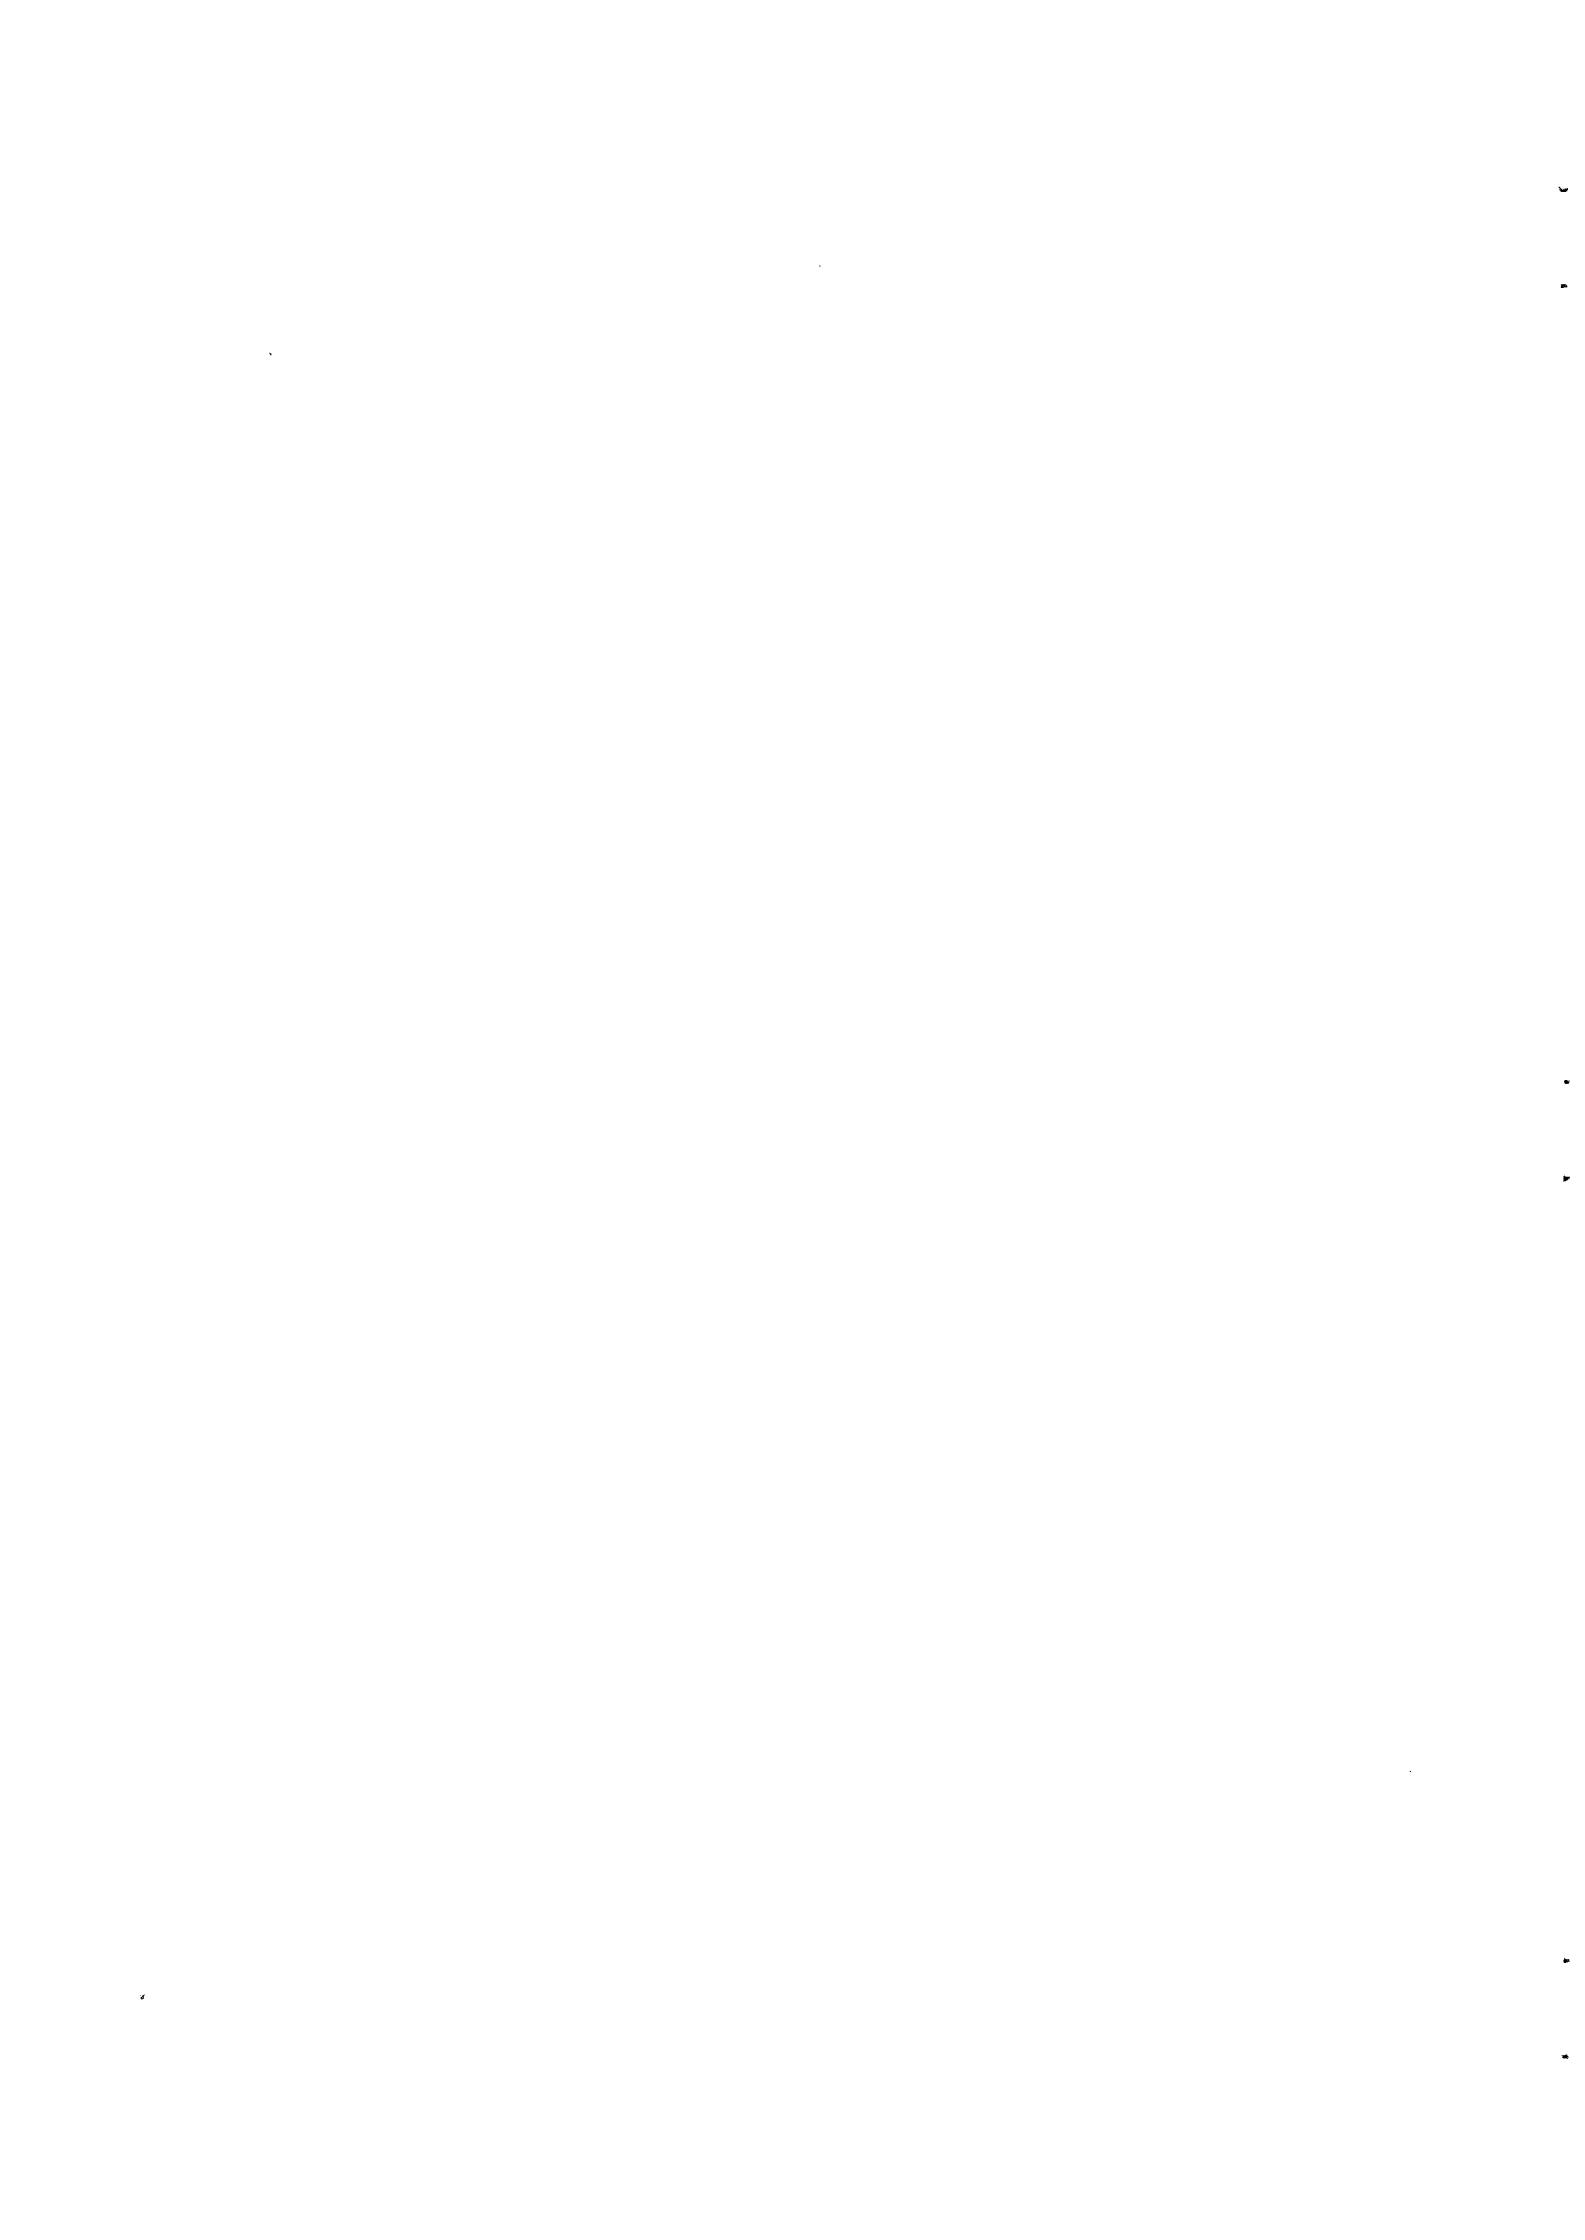

Nous remercions le groupe SURTROPAC de l'organisation des campagnes à la mer.

Nous remercions aussi les équipages des navires océanographiques qui ont largement contribué à la réussite des opérations à la mer par leurs remarquables efficacité et bienveillance.
