

## **Abstract**

**Title:** Analysis of knowledge of school young at second grade at primary school about inhabitant protection

**Objectives:** The aim of this bachelor thesis is to discover the knowledge of pupils of last years of primary school about inhabitant protection.

**Methods:** A knowledge test consisting of 9 questions was created and used to discover the knowledge of the pupils. This questionnaire was distributed in two primary schools in Žďár nad Sázavou. The target group was 9th grade pupils. A total of 55 respondents filled in the questionnaire. The data was converted to electronic form and was edited and graphically processed using Microsoft Office Excel.

**Results:** The pupils of the ninth grade proved overall 78% knowledge of the subject of inhabitant protection. The pupils were most successful in the area of traffic safety education. The lowest level of education was detected in the area of health education.

**Keywords:** knowledge, young, protection, inhabitants, school
