

Abstract

Title: Analysis of primary school pupils' knowledge of population protection

Objectives: The aim of this diploma work is to discover the knowledge of pupils of second degree of primary school about inhabitant protection.

Methods: An online knowledge test consisting of 23 questions was created and used to discover the knowledge of the pupils. This test was sent to leaders of primary schools, sports and leisure organizations. The target group consisted of pupils of the second grade of primary school. A total of 458 respondents participated in the research. The data was processed and graphically interpreted using Google Sheets.

Results: Pupils of the second grade of primary school showed in the overall evaluation 68% knowledge of the issue of population protection. Children have the most knowledge about health education. They showed the lowest level in traffic education. There are no significant differences between the knowledge of girls and boys.

Keywords: analysis, knowledge, pupils, protection, inhabitants
