
ELICITING TACIT KNOWLEDGE WITH A GRAMMAR-TARGETED INTERVIEW METHOD

Michele Suzanne Zappavigna

A dissertation submitted in fulfillment
of the requirements for the degree of
Doctor of Philosophy
(Information Systems)

School of Information Technologies
University of Sydney

2007

Abstract

Tacit knowledge represents a challenge to knowledge elicitation due to the assumption that this type of knowledge cannot be articulated. We argue that Polanyi's (1966:4) widely cited notion that “we know more than we can tell” represents a weak model of language that does not acknowledge the grammatical patterns in spoken discourse that we, as speakers, apply tacitly. We investigate the hypothesis that individuals articulate what they know through grammatical patterns, referred to as under-representation, without direct awareness. This thesis develops and pilots a grammar-targeted interview method aimed at unpacking specific grammatical features that occur in spoken discourse. The model of language from which these features are derived is Systemic Functional Linguistics. We report findings from three empirical studies of tacit knowledge in corporate organisations where we used the grammar-targeted interview technique to elicit tacit knowledge in the areas of knowledge management, requirements analysis and performance reviews. We compare this interview method with a content-targeted approach. The results show that the grammar-targeted technique produces less under-represented discourse thus allowing tacit knowledge held by the interviewees to be made visible. Based on the linguistic analyses undertaken in these field studies we propose that Polanyi’s expression “we know more than we tell” be reformulated to “we tell more than we realise we know”.

Date

This thesis is dedicated to two fine men: Allan Roy Horton, my grandfather,
and his namesake, my son, Orlando Allan Jay Lee, born during Field Study 3.

There are many people with great amounts of tacit knowledge that have helped me with this thesis. I am in debt to my supervisor, Jon Patrick, for his time and guidance. I would also like to thank the following people: Joseph Davis, my associate supervisor, Casey Whitelaw, my friendly companion on the thesis journey, Andrea Stern for her counsel, James Curran, for our arguments and Toby Hawker for his statistical assistance.

I have received a great amount of help from the community of generous and gifted systemic functional linguists. In particular, I would like to thank Maria Couchman, Christian Mattheissen, David Butt, Geoff Williams, Jim Martin, Chris Cleirigh, Kathryn Tuckwell, Mick O'Donnell and Matthew Honnibal.

Special thanks to my parents for their encouragement and support, and for baby-sitting my son at crucial moments.

Conventions

Grammatical terms from Systemic Functional Linguistics are presented in arial font. These terms also appear in the glossary at the end of the thesis. Definitional terms from other theories are in *italics*.

Table of Contents

| | |
|--|----|
| Chapter 1 Introduction | 1 |
| 1. Background: The turn away from language: Tacit knowledge as ineffable | 1 |
| 2. Research questions. | 3 |
| 3. A linguistic archaeology of tacit knowledge | 5 |
| 3.1. Tacit knowing as a text | 5 |
| 4. The novel contribution of this thesis | 6 |
| 5. The structure of this thesis | 7 |
| 5.1. Supporting Publications | 9 |
| Chapter 2 On justifying the study of tacit knowing | 11 |
| 1. Introduction | 11 |
| 2. An etymology of tacit knowledge | 12 |
| 3. What does it mean to know more than we can tell? | 14 |
| 3.1. What does it mean to explicate tacit knowledge? | 15 |
| 4. The kick-off problem: the predicament of talking about tacit knowledge | 16 |
| 5. Objection: Tacit knowledge that can be articulated is hidden knowledge | 18 |
| 6. Conclusion | 21 |
| Chapter 3 Ineffability in Polanyi's theory of tacit knowing | 22 |
| 1. Introduction | 22 |
| 2. Subsidiary awareness: locating tacit knowledge below-view | 23 |
| 2.1. Indwelling and interiorization | 25 |
| 3. Articulation: what does it mean to know more than we can tell? | 26 |
| 3.1. The tacit coefficients of language: The structure of meaning in tacit knowing. | 27 |
| 3.1.1. Words functioning as indicators | 27 |
| 3.1.2. Words functioning as symbols. | 28 |
| 3.1.3. Words functioning as metaphors | 29 |
| 4. Tacit Semiosis: translating ttk into peircean semiotics | 31 |
| 4.1. A brief introduction to peirce's theory of semiosis (meaning-making). | 31 |
| 4.2. Rewriting tacit integration using Peircean semiotics. | 34 |
| 5. Conclusion | 37 |
