Acknowledgements

First and foremost I would like to thank my supervisor David Easdown. Thank you for your guidance, for all the time you have given me, and for all the effort you have put in to helping me make this thesis the best it can be. I have really enjoyed working with you over the last few years.

I would also like to thank my friends from the University of Sydney for sharing this experience with me. Thank you to Timothy Schaerf and James East, with whom it has been a pleasure to share an office for many years, and also to James Parkinson, Jono Kusilek, Shona Yu, Hai Ho and Roslyn East. My time at uni was made much more enjoyable because of you.

Finally, I would like to thank my family, especially my mother, my brother Michael, and my sister Melinda, for all their encouragement and support over the years. Thank you for everything that you have done for me.

This thesis contains no material which has been accepted for the award of any other degree. To the best of my knowledge and belief this thesis contains no material previously published by any other person except where due acknowledgement has been made.
