## Abstract

Evidentiality as an important and pervasive linguistic phenomenon has attracted much of scholars' attention from various disciplines. Recently, remarkable achievements have been made in this area. However, previous studies have been devoted to examining evidentiality in the oral and written genre with little attention paid to the study of evidentiality in simultaneous interpreting. Besides, studies on translation universals mainly engage in translational English or translated Chinese with a focus on lexical density, information load, sentence structure, collocations etc.. Few have contributed to the research of evidentiality in the interpreted texts, leaving a vacancy to be filled.

In order to verify translation universals in the interpreted texts from the aspect of evidentiality, this thesis aims to explore distribution features of evidentiality in the source-Chinese, interpreted-English and source-English texts based on the nine panel discussions of Summer Davos 2011. To start with, crouching on the previous academic efforts, classification suitable for the study of evidentiality in Chinese-English simultaneous interpreting is put forward. Six types of evidentiality are examined including belief, induction, deduction, hearsay, reliability and expectation. Then, distribution features of six types of evidentials in the three sub-corpora are explored. Subsequently, divergences in the occurrence and frequency in the three sub-corpora are examined in detail. The findings are as follows: (1) interpreters apply less belief and expectation evidentials than both English and Chinese speakers do while prefer to adopt common used words, showing a tendency of simplification; (2) interpreters, influenced by the target-language culture, observe norms in native English by using more reliability evidentials that are less certain in degrees, which shows a tendency of normalization; (3) interpreters employ hearsay evidentials more frequently than both English and Chinese speakers do. In other words, interpreters consciously add information to explain how they acquire the knowledge,

reflecting a tendency of explicitation; (4) interpreters, influenced by source Chinese, use more deduction and less induction evidentials than English speakers do.

**Key Words:** Chinese-English SI; evidentiality; evidential; corpus

## 摘要

言据性作为一种重要而又普遍的语言现象一直广受学者的关注。近年来，有关言据性的研究取得了丰硕成果。然而以往对言据性的研究主要集中在口语和写作等方面，少有学者关注同声传译跨语言交际中的言据性特征。此外，翻译学科中对译语是否符合翻译共性假设的研究也主要集中在英语译语或汉语译语，考察译语中连接词汇，平均句长以及信息载量等方面，鲜少关注言据性在译文中所呈现的特征。

为进一步验证言据性在汉英同声传译中的特征是否符合翻译共性的假设，本文以 2011 年夏季达沃斯论坛 9 场小组讨论的同声传译语料为依托，分析言据性在汉语源语，英语译语以及英语源语中的分布特征。首先基于以往对言据性的分类研究，本文提出了适用于汉英同传的分类体系，考察了信念、归纳、演绎、传言、信度和预期六大据素。在此基础上利用语料库工具对上述两个子库中言据性出现的频数和频率差异进行分析。研究发现如下：（1）译员较少使用信念和预期据素，且表达形式单一，频繁使用常用词，表明译文呈简化趋势；（2）译员受目标语文化影响，遵从英语母语发言人的习惯，多用较为保守的信度据素，译文呈范化趋势；（3）译员更频繁地使用传言据素，有意识地添加信息使译文更加明确，译文呈现显化趋势；（4）受汉语源语影响，译员与英语发言人相比较更多地使用演绎据素，较少使用推断据素。

## Chapter 1 Introduction

### 1.1 Research Background

Evidentiality is an important and pervasive linguistic phenomenon. In the narrow sense, it refers to the expression of the source of information while in the broad sense, it also embodies the speaker's assessment of the knowledge (Chafe, 1986). Every language has some way of making reference to the source of information or coding speakers' assessment of the epistemological status of their information (Mushin, 2001), which makes evidentiality full of academic and practical values.

Much of the original interest in evidentiality is aroused by American Indian languages, and especially those of Northern California, in which the marking of evidentiality through verb suffixes is widespread (Chafe & Nichols, 1986).

Boas is deemed as the first one to use the term "evidentiality" in descriptive linguistics (Jacobsen, 1986). Boas (1947: 206) describes it as "a small group of suffixes expressing source and certainty of knowledge..." Sapir (1911: 114) also notices "how frequently the form expresses the source or nature of the speaker's knowledge". Swadesh (1939: 82) groups the quotative and the inferential together as "mode of evidence" and places the label "evidential" over forms of the inferential in the analysis of the language "Nootka". Lee (1938: 89) deals with the interpretation of Wintu grammatical categories and refers to it by labels such as "suffixes giving the source of information". Hoijer (1954: 10) discovers evidential phenomena in some Indian languages: "the technique, in a number of languages, whereby statements are classed as known from the speaker's experience, from hearsay, or from cultural tradition".

Jakobson (1957:392) introduces the term "evidential" as a "tentative label" for the generic verbal category. He suggests four possible sources of evidential information: someone else's report (quotative, i.e., hearsay evidence), a guess (presumptive evidence), and one's own previous experience (memory evidence) (Jacobsen, 1986).

In the spring of 1981, the first conference on evidentiality was held in Berkeley. Consequently, *Evidentiality: The Linguistic Coding of Epistemology*, the first collection of papers on evidentiality is published, which has far-reaching impact on further studies in this field. Since then, evidentiality has become an established research topic in linguistics (Dendale & Tasmowski, 2001).

Domestically, a few scholars have also paid attention to evidentiality. Hu (胡壮麟, 1994) brings into different definition and models of evidentiality, employs Chafe's theory to analyze Chinese evidentials (胡壮麟, 1995) and illustrates differences of evidentials in genre of news reports and debates (胡壮麟, 1994). Zhang (张伯江, 1997), Yan (严辰松, 2000) and Niu (牛保义, 2005) also introduce the theory of evidentiality and evidentials. Zhu (朱永生, 2006) proposes his analysis of Chinese evidentials according to Aikhenvald's model. Fang (房红梅, 2006) adopts a systematic-functional approach to evidentiality.

Although evidential studies have attracted attention from scholars across various disciplines, little attention has been paid to this area in the discipline of corpus-based interpreting studies. The new discipline in combination of corpus tools and methods with interpreting studies is put forward in the late 1990s which offers a tool "both viable and revelatory not only for the study of interpreting, per se, but for translation studies as a whole" (Shlesinger, 1998). Generally speaking, corpus-based interpreting studies, based on the constructed monolingual, parallel or comparable corpora, mainly focus on two themes: the study of linguistic features of interpreted texts and observation and analysis of interpreting processing (张威, 2012).

To be specific, the study of linguistic features indicates the identification of lexical characteristics such as lexical density and variety, high-frequency words, concordances, lexical collocations and co-occurrences etc. in comparable texts as evidence of translation universals including explicitation, simplification and normalization or conventionalization (Sergio & Falbo, 2012).

More specifically, explicitation reflects a tendency to make translation more explicit by adding background information or other materials. Simplification refers to the idea that translator subconsciously simplify the language or message or both.

Degree papers are in the "[Xiamen University Electronic Theses and Dissertations Database](#)". Full texts are available in the following ways:
