1 Including pupils with SEN and/or disabilities in primary design and technology lessons

Introduction

This booklet gives tutors and trainees information about subject-specific issues in the design and technology curriculum for pupils with SEN and/or disabilities. It offers a straightforward introduction to planning inclusive design and technology lessons. There are also suggestions for further reading and support in section 7.

Each booklet in this series contains a self-audit table (section 3). This offers a range of ideas that you can use to check against your practice and the practice you observe. The organisation of information in this table is based on the most recent research evidence and the views of expert teachers.

Recent evidence (eg Davis and Florian, 2004) suggests that much of what has traditionally been seen as pedagogy for pupils with SEN and/or disabilities consists of the approaches used in ordinary teaching, extended or emphasised for particular individuals or groups of pupils. This applies even when teaching approaches may look very different, eg when teachers are working with pupils with complex needs.

Trials of these materials in 2007/08 suggested that grouping teaching approaches into themes helps new teachers and those who work with them to consider and discuss their practice. Therefore each self-audit table is grouped under eight themes:

- maintaining an inclusive learning environment
- multi-sensory approaches, including information and communication technology (ICT)
- working with additional adults
- managing peer relationships
- adult-pupil communication
- formative assessment/assessment for learning
- motivation, and
- memory/consolidation.

There are many overlaps between these themes, but the model offers a useful starting point to help you develop teaching approaches that include pupils with SEN and/or disabilities.

Design and technology

"In design and technology pupils combine practical and technological skills with creative thinking to design and make products and systems that meet human needs. They learn to use current technologies and consider the impact of future technological developments. They learn to think creatively and intervene to improve the quality of life, solving problems as individuals and members of a team.

"Working in stimulating contexts that provide a range of opportunities and draw on the local ethos, community and wider world, pupils identify needs and opportunities. They respond with ideas, products and systems, challenging expectations where appropriate. They combine practical and intellectual skills with an understanding of aesthetic, technical, cultural, health, social, emotional, economic, industrial and environmental issues. As they do so, they evaluate present and past design and technology, and its uses and effects. Through design and technology pupils develop confidence in using practical skills and become discriminating users of products. They apply their creative thinking and learn to innovate."
National Curriculum, QCA, 2009

Design and technology provides particular opportunities for:

- practical learning experiences which promote success and raise achievement

- focusing on real scenarios and design problems that are meaningful to pupils

- using appropriate, differentiated materials to suit pupils of different abilities

- using a range of methods to communicate – avoiding over-reliance on the written word

- using ICT as a way for pupils to realise, develop and enhance their work

- supporting learning in other subjects, eg mathematics and science

- work on personally motivated design tasks where the pupil takes ownership of their work and of their own learning

- working in a flexible range of contexts and topics that can be adapted to suit individual interests and motivations

- pupils to work at their own pace and level with appropriate support and intervention from the teacher, and

- individually negotiated targets between the teacher and pupil that can be reviewed as required – pupils who need to work at a slower pace can do so, and pupils who work more quickly can be further challenged to develop their work with activities which extend and enrich their experience.

Roles and responsibilities

Recent legislation and guidance make clear that **all** the teaching staff in a school are responsible for the provision for pupils with SEN and/or disabilities. All staff should be involved in developing school policies and fully aware of the school's procedures for identifying, assessing and making provision for pupils with SEN and/or disabilities. Staff should help pupils with SEN to overcome any barriers to participating and learning, and make any reasonable adjustments needed to include disabled pupils in all aspects of school life.

The Disability Discrimination Act (DDA) has substantial implications for everyone involved in planning and teaching the curriculum. Schools have specific duties under the DDA to:

- make reasonable adjustments to their policies and practice to prevent discrimination against disabled pupils

- increase access for disabled pupils, including access to the curriculum, through accessibility planning, and

- promote disability equality and have a disability equality scheme showing how they will do so.

These duties are important and significant. They require schools to:

- take a proactive, systematic and comprehensive approach to promoting disability equality and eliminating discrimination, and

- build disability equality considerations in from the start at every level of activity, including developing and delivering the curriculum and classroom practice.

Schools must address their various DDA duties together in a way that brings greater benefits to disabled pupils, staff, parents and other users of the school. Using the self-audit table in this booklet to develop an inclusive approach to your teaching will help you carry out these duties in your subject.

Modifying the curriculum and the National Strategies to match pupils' needs

Teachers have a statutory duty to modify the programmes of study (or National Strategy materials).

"Schools have a responsibility to provide a broad and balanced curriculum for all pupils."
National Curriculum, QCA, 2008

This is more than just giving pupils 'access to the curriculum'. The curriculum is not immovable, like some building, to which pupils with SEN and/or disabilities have to gain access. It is there to be changed, where necessary, to include all pupils.

The statutory 'inclusion statement' in the National Curriculum sets out a framework for modifying the curriculum to include all pupils. Teachers have to:

- set suitable learning challenges

- respond to pupils' diverse learning needs, and

- overcome potential barriers to learning and assessment for particular individuals and groups of pupils.

These principles allow you to:

- choose objectives for pupils with SEN and/or disabilities that are different from those of the rest of the group, or

- modify the curriculum to remove barriers so all pupils meet the same objectives.

Planning for pupils with SEN and/or disabilities should be part of the planning that you do for all pupils, rather than a separate activity. It doesn't need to be complicated or time-consuming. You can simply jot down brief notes in your lesson plans on the learning objectives and approaches you will use to remove barriers for pupils with SEN and/or disabilities. Any personal targets the pupil has can inform this planning. At times it may be appropriate to plan smaller steps to achieve the learning goal or provide additional resources. It is often possible to use the support available to do this, either from the SENCO or teaching assistant/mentor.

You should also think about the questions you will ask different groups and individuals and the ways you will check that pupils understand. Some pupils with SEN and/or disabilities will show they understand in different ways from their peers, so you should look at a range of opportunities for pupils to demonstrate what they know and can do.

2 Removing barriers to the primary design and technology curriculum for pupils with SEN and/or disabilities

Teaching and learning

To make design and technology lessons inclusive, teachers need to anticipate what barriers to taking part and learning particular activities, lessons or a series of lessons may pose for pupils with particular SEN and/or disabilities. So in your planning you need to consider ways of minimising or reducing those barriers so that all pupils can fully take part and learn.

In some activities, pupils with SEN and/or disabilities will be able to take part in the same way as their peers. In others, some modifications or adjustments will need to be made to include everyone.

For some activities, you may need to provide a 'parallel' activity for pupils with SEN and/or disabilities, so that they can work towards the same lesson objectives as their peers, but in a different way – eg using a computer simulation of a process rather than manipulating equipment.

Occasionally, pupils with SEN and/or disabilities will have to work on different activities, or towards different objectives, from their peers.

There are some examples in the checklist in section 3.

Assessment

When assessing pupils, you need to plan carefully to give pupils with SEN and/or disabilities every opportunity to demonstrate what they know and are able to do, using alternative means where necessary. For example:

"Pupils who are unable to use tools will be unable to achieve certain aspects of the attainment target. When a judgement against level descriptions is required, assessment of progress should either discount aspects that relate to the use of tools or indicate the levels of support that were necessary to complete this work."
QCA, 2008

3 Self-audit for inclusive design and technology lessons: planning teaching, learning and support

You can use the following checklist to audit your practice and plan for more inclusive lessons.

The left-hand column of the table suggests approaches that are appropriate for pupils with SEN and/or disabilities in all subjects. The right-hand column suggests extensions and emphases that may be helpful in removing barriers for pupils with SEN and/or disabilities in design and technology.

In most cases, the actions recommended are good practice for all pupils, regardless of their particular SEN and/or disability.

In other cases, the actions taken will depend on the barriers to taking part and learning identified in relation to the lesson being taught and pupils' particular SEN and/or disabilities. For example, the challenges of including pupils with a visual impairment may be quite different from those for including pupils with other SEN and/or disabilities.

Some children with identified needs – such as behavioural, emotional and social difficulties (BESD) – may benefit from changes in activities or working with selected others or rest breaks. In these cases it is helpful to discuss and plan with a support assistant who knows the child well. The SENCO, subject associations and/or organisations supporting people with particular SEN/disabilities may be able to offer more specialist advice.

These examples are not comprehensive or exhaustive. They are intended to stimulate thinking rather than offer detailed advice on how to teach the subject to pupils with different types of special educational needs and/or disabilities. You will wish to add your own general or subject-specific ideas to the self-audit table.

Maintaining an inclusive learning environment

Maintaining an inclusive learning environment	Design and technology	Observed	Tried out
Sound and light issues For example: • background noise and reverberation are reduced • sound field system is used, if appropriate • glare is reduced • there is enough light for written work • teacher's face can be seen – avoid standing in front of light sources, eg windows • pupils use hearing and low vision aids, where necessary, and • video presentations have subtitles for deaf or hearing-impaired pupils and those with communication difficulties, where required.	**Sound and light issues** Avoid demonstrations or discussion when machines are running. The noise in design and technology lessons can be very uncomfortable for pupils with a hearing impairment. While a pupil is working on a practical activity allow them to switch off their aids if it is very noisy (remind them to switch them on again afterwards). Interactive whiteboards are non-reflective to reduce glare.		
Seating Pupils' seating and the main board position are planned for the shape of the room. Pupils can see and hear clearly, as necessary: • the teacher • each other, and • the board/TV/screens. Seating allows for peer or adult support. There is room for pupils with mobility difficulties to obtain their own resources, equipment and materials. Furniture is suitable. Consider the choice of chairs and desks, eg adjustable height tables, raised boards.	**Seating** Consider the accessibility of demonstrations. Plan the demonstration area so that it is clearly laid out, uncluttered and gives all pupils a clear view. Height-adjustable tables, sinks and hobs make activities more accessible. Seating should allow all pupils in the class to communicate, respond and interact with each other and the teacher in discussions. Avoid the need for copying lots of information. For example, notes on interactive whiteboards can be printed off for all pupils.		

Maintaining an inclusive learning environment	Design and technology	Observed	Tried out
Resources Storage systems are predictable. Resources are: • accessible, eg within reach, and • labelled clearly to encourage independent use, eg using images, colour coding, large print, symbols, Braille, as appropriate.	**Resources** Use systems such as racks so that items such as tools can be found and put away easily. To make tasks accessible, pupils use, where appropriate: • specialist aids – eg talking weighing scales, jigs to aid cutting, templates, patterns, ready-made parts, kettle-tipping devices, sprung or electric scissors, and • generic aids – eg jumbo pencils if hand control is weak, non-slip mats (dycem) to hold papers, books and equipment in place, BluTac to hold small items or as a temporary fixing (eg for rulers when drawing).		
Displays Displays are: • accessible, within reach, visual, tactile • informative, and • engaging. Be aware of potentially distracting elements of wall displays.	**Displays**		
Low-arousal areas A low-arousal area is planned for pupils who may need it and is available for use by all pupils. The area only needs to have immediately relevant materials/resources to minimise distraction.	**Low-arousal areas**		

Maintaining an inclusive learning environment	Design and technology	Observed	Tried out
Health and safety Health and safety issues have been considered, eg trailing leads secured, steps and table edges marked. There is room for pupils with mobility difficulties to leave the site of an accident. Remember that pupils with an autistic spectrum disorder (ASD) may have low awareness of danger.	**Health and safety** Consider the safety of demonstrations. Make sure pupils do not come into contact with materials they are allergic to.		
Unfamiliar learning environments Pupils are prepared adequately for visits.	**Unfamiliar learning environments**		

Multi-sensory approaches, including ICT

Multi-sensory approaches, including ICT	Design and technology	Observed	Tried out
Multi-sensory approaches Pupils' preferred learning styles are identified and built on: • when teaching – eg visual, tactile, auditory and kinaesthetic approaches are used, such as supporting teacher talk with visual aids; using subtitled or audio-described film/video • for recording – alternatives to written recording are offered, eg drawing, scribing, word processing, mind maps, digital images, video, voice recording, and • to promote security and aid organisation – eg visual timetables are used to show plans for the day or lesson; visual prompts for routines, such as how to ask for help; shared signals are developed so that pupils can convey their understanding, uncertainty or need for help.	**Multi-sensory approaches** Prepare visual prompts, using images, photos or symbols, showing the order to carry out a sequence of activities for a particular process. Checklists allow pupils to see what they have completed, what to do next and where to finish. Some pupils will need to use non-visual means to evaluate different products, to use this information to generate ideas and to become familiar with tools and other equipment. This will require extra time.		

Multi-sensory approaches, including ICT	Design and technology	Observed	Tried out
ICT ICT is used to support teaching and learning. Accessibility features are used to include pupils with SEN and/or disabilities, as appropriate, eg: • keyboard shortcuts instead of a mouse • sticky keys • a foot-controlled mouse, a head-controlled mouse or a wireless mouse • screen filters to cut down glare • increased font sizes for screen extension – in any case, fonts used in printed material should not be smaller than 12 pt (24 pt for screen presentations) • clear font type (normally sans serif, such as Arial or Comic Sans) • appropriate contrast between background and text, and/or • a talking word processor to read out text. Pupils with poor motor control may gain confidence and achieve success through writing/drawing on the computer. Predictive text can encourage pupils to use a more extensive vocabulary and attempt 'difficult' spellings. It can be enhanced by using subject-specific dictionaries.	**ICT** In design and technology lessons, ICT can: • help pupils model ideas and design products – eg using graphics, computer-aided design (CAD) software or spreadsheets • support making activities using computer-aided manufacturing (CAM) equipment such as embroidery machines, plotter/cutters etc, and • be used to develop symbol-supported recipes or instructions.		

Working with additional adults

Working with additional adults	Design and technology	Observed	Tried out
Consulting pupils Wherever possible, pupils are consulted about the kind and level of support they require.	**Consulting pupils**		
Planning support Support from additional adults is planned to scaffold pupils' learning, allowing them, increasingly, to work independently. Planning should identify: • which individuals/groups will receive support • where in the lesson pupils will need support • the type of support pupils should receive, and • when pupils should be allowed to work independently. Additional adults: • are clear about the lesson objectives • know the sequence of the lesson • understand the lesson content • know how to break tasks into more manageable chunks • are provided with key questions to encourage formative assessment, and • where appropriate, are familiar with any ICT used to support pupils.	**Planning support** Support could include: • carrying out activities by following the pupil's instructions • specific support so that pupils can engage in certain practical activities, eg translating design ideas into a drawing. Pupils working at national curriculum level 1 will use tools and equipment 'with help where needed', and without this support will not be able to achieve. For these pupils, supervision and help from an adult and/or buddy in the making stages is invaluable for them to learn and practise skills safely. Additional adults should promote pupils' independence by giving guidance and asking questions that enable pupils to: • think for themselves – pupils should not always be following a designing and making process step by step, with the teacher/additional adult doing most of the thinking, and • perform tasks for themselves – there is a fine line between intervention and taking over a pupil's project. Additional adults should be clear about: • the order and importance of processes in a task • the skills and knowledge they must promote, and • the health and safety rules, eg basic food hygiene.		

Working with additional adults	Design and technology	Observed	Tried out
Evaluation Additional adults report to the teacher on pupils' progress. The effectiveness of support is monitored and reviewed.	**Evaluation**		15

Managing peer relationships

Managing peer relationships	Design and technology	Observed	Tried out
Grouping pupils All forms of pupil grouping include pupils with SEN and/or disabilities. Manageable mixed-ability grouping or pairing is the norm, except when carefully planned for a particular purpose. Sequence of groupings is outlined for pupils. The transition from whole-class to group or independent work, and back, is clearly signalled. This is particularly helpful for pupils on the autistic spectrum.	**Grouping pupils**		
Managing group work and discussion Pupils move carefully from paired discussion to group discussion – the language necessary for whole-class discussion work may be a barrier for pupils who find it difficult to express themselves in public. Paired and small group discussions provide opportunities for all to take part. Pupils are assigned specific roles (eg chair, writer, reporter, observer) which gives all pupils something to do and keeps them focused.	**Managing group work and discussion** Design and make assignments give pupils opportunities to work as individuals or in a team, learning from the work of others. For some pupils, eg those on the autistic spectrum, developing ideas with others can be challenging. Pairings and groupings need to be sensitive to this.		
Developing responsibility Pupils with SEN/disabilities are: • given opportunities to initiate and direct projects, with support as appropriate, and • involved as equal contributors in class/school governance and decision making.	**Developing responsibility**		

Adult-pupil communication

Adult-pupil communication	Design and technology	Observed	Tried out
Teachers' communication Language is clear, unambiguous and accessible. Key words, meanings and symbols are highlighted, explained and written up, or available in some other way. Instructions are given clearly and reinforced visually, where necessary. Wording of questions is planned carefully, avoiding complex vocabulary and sentence structures. Questions are prepared in different styles/levels for different pupils – careful preparation ensures all pupils have opportunities to answer open-ended questions. Alternative communication modes are used, where necessary, to meet pupils' communication needs, eg signing, Braille. Text, visual aids, etc are checked for clarity and accessibility. For example, some pupils might require adapted printed materials (font, print size, background, Braille, symbols); some may require simplified or raised diagrams or described pictures.	**Teachers' communication** Clarify technical terms that have different meanings in other contexts, for example 'knead'/'need', 'grain', 'glaze', 'form', 'saw', 'seam', etc. Labels placed around the room, lists of key words, posters, etc can help pupils to recognise and spell the names of important pieces of equipment. Flow diagrams of key processes, time plans or design prompts with graphics may also be helpful. Ask pupils open-ended questions at first, for example to elicit original ideas and get a feel for their level of experience – eg "Has anybody got any ideas of other foods we could add to this bread to make it different?" If ideas are not forthcoming or are limited, have real examples ready.		
Pupils' communication Alternative communication modes, such as sign or symbol systems, are encouraged, and pupils' contributions are valued. Advice is sought from the SENCO, a speech and language therapist, local authority advisory staff, and/or the pupil themselves on the best way of using such communication modes in lessons. Discussion of experiences and investigations is encouraged to help pupils understand them.	**Pupils' communication** Pupils could contribute to product evaluation, where appropriate, using simple choice cards with words and/or symbols, eg for like/dislike, simple ranking or recording sheets.		

Adult-pupil communication	Design and technology	Observed	Tried out
Pupil-teacher interaction Where appropriate, pupils are allowed time to discuss the answers to questions in pairs, before the teacher requests verbal responses. Pupils with communication impairments are given: • time to think about questions before being required to respond • time to explain, and • respect for their responses to questions and contributions to discussions. Additional adults prepare pupils to contribute to feedback sessions, where necessary.	**Pupil-teacher interaction** Many pupils find talking about what they have done easier than talking about what they plan to do.		

Formative assessment/assessment for learning

Formative assessment/ assessment for learning	Design and technology	Observed	Tried out
Understanding the aims of the lesson Lesson objectives are made clear in pictures/symbols/writing, as appropriate. Objectives are challenging yet achievable. This will promote self-esteem and enable all pupils to achieve success.	**Understanding the aims of the lesson** For example, for the objective: **To know that we need to eat five portions of fruit and vegetables a day**, show pupils real or pictorial examples of '5 a day'.		
Focus on how pupils learn Pupils' own ways of learning and remembering things are emphasised. Pupils are encouraged to talk about how they achieved something. Dialogue is the key to successful assessment for learning. Teachers communicate in ways pupils are comfortable with.	**Focus on how pupils learn**		
Pupils know where they are in relation to learning aims End-of-lesson discussions focus on one or more of the ideas explored and the progress that pupils have made towards them during the lesson. Pupils are encouraged to look back to previous work/photos/ records to see how much progress they have made. Half-termly or termly self-assessment sheets are used for pupils to assess their progress – a range of recording methods is accepted.	**Pupils know where they are in relation to learning aims** Break down the designing and making stages into small manageable steps, and incorporate designing into 'mini making' tasks with specific targets. Use a tick list or wallchart so that pupils are clear about what they are working towards and how far they have got in relation to completing the project.		

Formative assessment/ assessment for learning	Design and technology	Observed	Tried out
Giving feedback Marking and other feedback helps pupils improve their performance. Feedback is given in an appropriate form – verbally, in writing. Specific, rather than general, feedback is given. Comments are positive, explicit and evaluative. Emphasis is on the pupils' progress and achievement. Weaknesses are presented as areas for development. Opportunities are offered for pupils to attempt a piece of work again. These approaches are particularly useful for pupils who find it difficult to receive comments about improving their work. Praise is given discreetly where pupils find public praise embarrassing or difficult.	**Giving feedback**		

Formative assessment/ assessment for learning	Design and technology	Observed	Tried out
Understanding assessment criteria The number of goals/assessment criteria is kept small. Teachers talk to pupils about what they are trying to achieve. Pupils are involved in setting their own goals. Some pupils may find it difficult to understand the need for targets. Others may need time and support in target setting. Self-assessment and peer assessment are encouraged. Pupils are taught to use the language of assessment, eg "better…". Peer marking is encouraged, where buddies can evaluate each other's work in relation to success criteria.	**Understanding assessment criteria** Encourage pupils to become aware of their own and others' work through: • investigating, taking apart and evaluating products, and • evaluating other designers' work against clear criteria. Encourage pupils to use these skills to evaluate and improve their own work. Pupils may find it easier to: • look at a limited range of products at one time • have a mixture of familiar and less familiar products to look at • use prepared forms to record their responses, and • discuss, examine and taste products as a group rather than relying on written descriptions. Make sure that pupils, particularly those with BESD, judge their own work against the design specification rather than against the work of other pupils.		

Formative assessment/ assessment for learning	Design and technology	Observed	Tried out
Reviewing progress and helping pupils to improve Teachers' responses to pupils' errors recognise, value and build on the thinking that led to them. End-of-lesson discussion considers the ways of working the class has found fruitful or difficult. Pupils are asked, for example: • which key words, concepts, skills or processes were difficult and why, and how this could be improved • which parts of a task slowed them down, and • what could be done to make things go more efficiently. Some pupils may have anxieties about planning to improve, especially if it involves editing or redoing a task. Pupils are encouraged to see how they've improved on their previous best.	**Reviewing progress and helping pupils to improve** When pupils destroy work or struggle when they make mistakes, highlight the developing ideas and mistakes of professional designers and others. Show how mistakes can be corrected, to remove pupils' fear of making mistakes.		
Gathering assessment evidence A range of sources of assessment evidence is drawn upon. Assessment looks at what pupils know and can do, not at labels associated with SEN and/or disabilities. Notes made about individual pupils' difficulties/successes in the lesson take account of their oral contributions as well as their written work.	**Gathering assessment evidence**		

Motivation

Motivation	Design and technology	Observed	Tried out
Understanding the structure of the lesson Pupils are clear about the duration and overall structure of the lesson. Visual timetables or other devices are used to indicate the structure and progress of lessons.	**Understanding the structure of the lesson** Warn pupils when they will need to be flexible, and anticipate and plan to cope with the distress this may cause some pupils. For instance, a food product may take between 10 and 15 minutes to cook, and some pupils may become distressed if it is not ready exactly on time.		
Relevant and motivating tasks Tasks motivate pupils. They: • stimulate interest and enthusiasm • are challenging but manageable • draw on real and familiar contexts • are relevant to pupils' lives, and • build on previous learning in the subject and in other areas of the curriculum.	**Relevant and motivating tasks** Avoid abstract contexts. Provide a range of concrete starting points, materials and techniques. Provide opportunities for pupils to design for real purposes and to make real decisions. Choose projects where pupils can produce high-quality products, so they can be proud of what they have designed and made. This will raise their confidence and self-esteem and encourage them to be more ambitious in designing and making in future projects. Consider the length and complexity of tasks. Some pupils may be daunted by long or seemingly difficult tasks, and lack the confidence to get started. Pupils often find it easier to work on shorter, more focused assignments, which provide small elements of success to reward and motivate them. Break projects into smaller steps – eg instead of broad stages such as 'research', list sub-stages such as: • write five questions for your survey • ask your target audience to answer your survey • record your results, and • present your results.		

Motivation	Design and technology	Observed	Tried out
Relevant and motivating tasks continued	**Relevant and motivating tasks** continued Short, focused practical tasks (FPTs) are closely structured and led by the teacher. They allow pupils to practise and succeed in one or more design and technology processes. They build pupils' confidence and can give them ideas for their design – eg doing a series of biscuit-making activities before pupils consider how to design and make a new biscuit. These 'mini making' activities are highly motivating for pupils as they can see the results of their progress and efforts immediately. Design and make assignments give pupils the chance to put their knowledge and skills to the test in meeting challenges that address real needs and wants, and to apply design ideas and concepts in real and practical ways. If pupils only produce few or stereotypic ideas because they do not want to risk failure, provide plenty of stimuli, ideas and alternatives, including design solutions. These stimuli might include: • FPTs (see above) • visits as a stimulus for design contexts • experts working alongside pupils (make sure they are well briefed), and • tasks related to pupils' hobbies, interests and strengths. Some pupils could join a project part-way through, eg after the research is complete, so they can get into modelling and making more quickly.		24

Motivation	Design and technology	Observed	Tried out
Relevant and motivating tasks continued	**Relevant and motivating tasks** continued Where pupils' experience is limited, ask them to adapt, make improvements or add a new feature to the design of an existing product rather than 'invent' a whole new product. Devise activities for some pupils based on their strengths and successes. For example, this may mean centring activities around 'making', and letting other important processes be incorporated through and around making – for example, using three-dimensional 'mock-ups' rather than drawings. When a pupil only wants to 'make', choose a task that will only work if some designing is done.		
Reward systems Pupils understand reward systems and are motivated to achieve the rewards available.	**Reward systems**		

Memory/consolidation

Memory/consolidation	Design and technology	Observed	Tried out
Recapping Recap learning from the previous lesson. Main points from the lesson are fed back by pupils, noted down and saved so pupils can refer to them.	**Recapping**		
Reducing reliance on memory The amount of material to be remembered is reduced. Repeat or display important information. The meaningfulness and familiarity of the material is increased. Mental processing and explanations of complex tasks are simplified. The use of memory aids is encouraged. These can include wallcharts and posters, useful spellings, personalised dictionaries, cubes, counters, abacus, Unifix blocks, number lines, multiplication grids, calculators, memory cards, audio recorders and computer software. Activities are structured so that pupils can use available resources, such as word banks. Strategies, including using ICT-based records, are used to reduce the need for pupils to rely on their short- or long-term memories. New learning fits into the framework of what the pupil already knows. Teaching assistants prepare pupils to contribute to feedback sessions, where appropriate.	**Reducing reliance on memory** Using digital cameras to record each stage of designing and making, then sequencing the photos, can be a useful tool to aid pupils' memory of the stages of completing the work. Display step-by-step reminders of key processes. Regularly repeat and reinforce previously learnt skills and processes.		

Memory/consolidation	Design and technology	Observed	Tried out
Consolidating learning Pupils' understanding is checked, eg by inviting pupils to reformulate key learning. Using visual or concrete ('real') materials, or activities involving movement, to reinforce or consolidate learning through a range of sensory channels. Reteach or revise material, where necessary, eg post-lesson tutoring. Opportunities are provided for pupils to repeat and reinforce previously learnt skills and processes on a regular basis, in similar and different contexts. Encourage pupils to develop their own strategies, eg an agreed approach to asking for help, rehearsal, note-taking, use of long-term memory, and place-keeping and organisational strategies.	**Consolidating learning**		
Independent study/homework Independent study/homework is explained during the lesson, not at the end, to make sure it is understood and recorded. Teachers check all pupils are clear about homework tasks. Homework tasks are accessible after the lesson, eg published on a noticeboard or on the school learning platform, so pupils can return to them, if necessary, after the lesson.	**Independent study/homework**		

4 Design and technology and Every Child Matters

In 2003, the green paper 'Every Child Matters: Change for children' was published. The key outcomes for the Every Child Matters (ECM) agenda were drawn up after consultation with children, young people and families. The five outcomes that mattered most to children and young people are set out below. Each of the outcomes can be addressed through the design and technology curriculum.

Outcome	General educational aspects	Through the design and technology curriculum
Be healthy	• Work towards independent learning • Actively enquire about differing environments • Keep mentally and emotionally healthy	Designing and making recipes for a healthy diet. Products to help people lead healthier lives. How poorly designed products can affect people's health (ergonomics).
Stay safe	• Keep safe in school and on school trips • Have stability and security • Know about their place in the wider community	Using tools and equipment safely. Caring for others. Using products safely and 'designing in' safety. Preparing food safely.
Enjoy and achieve	• Achieve personal and social development • Enjoy lessons • Achieve to their potential • Use alternatives to written recording, where appropriate	Developing products to meet their own and other people's needs. Creativity, risk taking and innovation. Enjoyment at seeing ideas made into reality. Understanding the made world in and beyond school. Coming up with practical solutions to problems relevant to their own lives.
Make a positive contribution	• Understand issues of difference and diversity through studying other environments and cultures • Understand about, and support, the local community • Involve themselves in extra-curricular activities	Designing products that make a difference. Thinking about design for inclusion and sustainability. Designing and making for others in their community. Challenging existing designs. Designing collaboratively to develop better ideas.

Outcome	General educational aspects	Through the design and technology curriculum
Achieve economic well-being	- Learn about ways to ensure their own economic well-being in the future - Experience visits from people who do various jobs - Visit different workplaces - Learn about different economies in different countries	Finding out what we design and manufacture locally and in the UK. Discovering who works in designing and manufacturing – product designers, chefs, engineers, architects.... Understanding the difference between shop-bought and home-made products. Developing enterprise skills – making products that can be sold. Making recipes to a budget.

5 Early development in the National Curriculum: the P scales for design and technology

For pupils working below level 1 of the National Curriculum, performance descriptions (P scales) for design and technology can be used to describe a 'best fit' for a pupil's performance.

All schools must report on pupils' attainment at the end of each key stage in terms of both P scales and national curriculum levels.

P scales 1–3 address very early levels of learning and are the same in all subjects, but illustrated with subject-specific examples.

As a trainee teacher, you may not meet pupils assessed at these very early levels very often. If you have to teach these pupils during your placements, you should expect a great deal of support in differentiating teaching and learning.

From **P4**, each subject has its own progression. For example:

At **P4**, pupils contribute to activities "by coactively grasping and moving simple tools" and exploring options "within a limited range of materials".

At **P5**, pupils use "a basic tool".

By **P6**, pupils recognise "familiar projects and explore the different parts they are made from".

At **P7**, pupils use "basic tools or equipment in simple processes, chosen in negotiation with staff", for example in cutting or shaping materials.

By **P8**, pupils begin contributing "to decisions about what they will do and how", for example, communicating their approval of certain features of a process.

The full P scales for design and technology are set out in QCA's Planning, Teaching and Assessing the Curriculum for Pupils with Learning Difficulties: Design and technology (please see section 7).

From **P8**, pupils move on to the national curriculum levels.

While a typically developing child will have achieved **P8** by the age of four, some pupils will take considerably longer.

At all times you should be aware of the need to respect the developmental maturity of the pupils you are planning for. Choose materials and tasks appropriate to the age and maturity of the pupils. This is a particular issue when using software and other published resources.

6 Bilingual learners

"Children must not be regarded as having a learning difficulty solely because the language or form of language of their home is different from the language in which they will be taught."
SEN Code of Practice (DfES, 2001)

Pupils must not be regarded as having a learning difficulty because they are learning English as an additional language (EAL).

Bilingual learners take up to two years to develop basic communication skills (street and playground survival language).

Some pupils may take a long time before they feel confident enough to actively take part in classroom activities and use the English they have learnt. A 'silent' period is typical of this learning and should not be seen as a learning difficulty.

Many learners with EAL do not acquire language in the same way as first language learners. A pupil may be fluent orally but struggle considerably with reading or writing; or a pupil may be very literate in written English, but lack confidence in the rapid flow of speech required in conversational dialogue. It is therefore important to assess language competence in all language modes and not to assume a level of competence based on performance in one mode.

'A Language in Common' (QCA, 2000) is a common assessment scale that can be used to gauge where pupils are in their acquisition of English. It gives assessment steps for pupils with EAL working below national curriculum level 1 and is useful in helping teachers reach a common understanding of the nature of each step or level of language acquisition. It also shows how the information can be used for target setting and what support may be needed to ensure progress.

Another useful resource is 'Assessing the Needs of Bilingual Pupils: Living in two languages' by Deryn Hall.

When a class or subject teacher feels that a lack of progress in a bilingual pupil's learning may be due to a learning difficulty (SEN or disability) they should consult the SENCO or inclusion manager and work with them to develop an appropriate response.

7 Sources of information and advice

Publications

The publisher, Folens, publishes a series called the Folens Specials which include design and technology-specific books with CDs, written for pupils with reading ages of six to nine years: **www.folens.com**

Davies, L, 2004, Meeting SEN in the Curriculum: Design & technology, David Fulton Publishers

The books above are all available to buy from the Design and Technology Association (DATA): **www.data.org.uk**

Davis, P and Florian, L, 2004, Teaching Strategies and Approaches for Pupils with Special Educational Needs: A Scoping Study, DfES Research Report RR516

Hall, D, 2001, Assessing the Needs of Bilingual Pupils: Living in two languages, David Fulton Publishers

QCA, 2000, A Language in Common: Assessing English as an additional language

QCA, 2009, Planning, Teaching and Assessing the Curriculum for Pupils with Learning Difficulties: Design and technology – available online at: **www.qcda.gov.uk/libraryAssets/media/P_scales_Design.pdf**

Websites

The Design and Technology Association (DATA) website has many ideas for working with pupils with SEN and/or disabilities in design and technology: **www.data.org.uk**

www.immersiveeducation.com (for Kar2ouche[1]) – a selection of resources to aid teaching

www.widgit.com – a selection of resources to aid teaching
