INTRODUCTION

The purpose of the data file presented below is twofold: the first purpose is to make available in printed form the basic data relating to the samples collected as part of the joint U.S. Geological Survey - Woods Hole Oceanographic Institution program of study of the Atlantic continental margin of the United States; the second purpose is to maintain these data in a form that is easily retrievable by modern computer methods. With the data in such form, repeated manual transcription for statistical or similar mathematical treatment becomes unnecessary. Manual plotting of information or derivatives from the information may also be eliminated. Not only is handling of data by the computer considerably faster than manual techniques, but a fruitful source of errors, transcription mistakes, is eliminated.

The sample collection data were transferred from the original field sheets to punched cards and from punched cards to magnetic tape. Computer printout sheets from these cards and tapes were checked for accuracy against the original field sheets and corrected if necessary. The analytical data were either generated directly by computer programs or transcribed from laboratory data sheets. The data presented here are reproductions of the final computer printout of the sample collection information contained in the magnetic tape file.

This volume supersedes Volume 1 (Hathaway, 1966) and its supplement (Hathaway, 1967).

ACKNOWLEDGEMENTS

Primary collection information was obtained by the various scientific parties aboard the numerous cruises on which the samples were obtained (see Table 1 below). Karen Gunn, Joseph R. Frothingham, Jr., Charlsa L. Head, and Frederick J. Jones transcribed information from the greater part of the field sheets and subsequently aided in proofreading of the file. All the color determinations were made by Daniel J. Stanley (Stanley, 1969). Those stations beginning with the letters A,B,M,N,S, and W were collected by ships of the Bureau of Commercial Fisheries. The help of Roland L. Wigley of that Bureau in making available these samples and the field information about them is also gratefully acknowledged. Most of the beach samples were collected by the Beach Studies Group under the direction of John M. Zeigler.

Acknowledgements of those responsible for the various analytical results are given in the introductory information for each of the analytical data sections.

Jacqueline Webster provided considerable advice and assistance in the preparation of computer programs by the editor.

The joint program was under the direction of K.O. Emery from 1962 to 1968.

* These cruises are part of a joint project of the U.S. Geological Survey and the Massachusetts Department of Public Works.

STRUCTURE OF THE DATA FILE

The basic unit of the file is a standard 120 character BCD (binary coded decimal) magnetic tape record. Each of these records is assigned a code number that indicates the type of information contained in the record. The information for each station is contained in several of these records, each with a characteristic code number. Examples of the types of information represented by these records or code lines follow:

<u>Code No.</u>	<u>Information contained</u>
COLLECTION DATA	
100	Station number, cruise number, date, time, time zone, general area, area code, sheet number, method of navigation, position, corrected depth, method of sounding.
110	Station number, sampling equipment, equipment code, lithologic description.
120	Station number, number of drops, volume obtained, percent processed, biologic description.
130	Station number, sample color, Forel color, Secchi disc reading, type and number of photographs, air temperature, surface water temperature; indicators as to whether the following were taken: bathythermograph, plankton tow, sample for archives, special geology sample; miscellaneous notes and comments.
140	(Core samples only) Station number, device, condition, weight, free fall, penetration, core diameter, core length, condition, disturbed portion, sectioning, extraction, volume, preservation.
ANALYTICAL DATA	
200-299	Size analysis: phi classes and frequency, percent of sand, silt and clay, modes and mode strength, number of modes, mean, median, standard deviation of size, skewness, kurtosis, sediment name, curve type.
300-399	Microscopical analysis of sand fraction.
400-499	Calcium carbonate, organic carbon and nitrogen analysis.
500-599	Mineralogical analysis.
600-699	Gravel analysis.
700-799	Chemical analysis.
800-899	Biological data.

A tape for each code line contains the information for each station arranged in numerical and alphabetical order as follows:

Code No.	Station No.	Appropriate Data	
100	1001	"	"
100	1002	"	"
100	1003	"	"
100	1004	"	"
...	"	"

The data in this volume are given as a separate table or section for each code line. Explanations of the information contained in the code line are given in the pages immediately preceding these tables.

Code Line 100 Cruise and station position data

Code line 100 contains the cruise number, date, time, position and depth of water at the station.

Explanation of headings

CODE # The number indicates that the line contains the type of data characterized by code 100.

STATION # The number assigned to the location at which a sample or information was taken. Two general types of station numbers are used in this file. Those of 4 numerals beginning with station number 1000 and those with the letter H followed by 3 numerals were collected as part of the Continental Margin Program. Most station numbers consisting of a letter followed by 3 numerals were collected by groups other than the Continental Margin Program and were supplied by the following: Stations beginning with the letters A,B,M,N,S, and W were supplied by the Bureau of Commercial Fisheries. Stations beginning with D were supplied by the U.S. Coast and Geodetic Survey. Stations beginning with E were supplied by Howard L. Sanders of the Woods Hole Oceanographic Institution and those beginning with P by Richard M. Pratt of the Woods Hole Oceanographic Institution. Most stations beginning with L were collected by the Beach Studies group under the direction of John M. Zeigler of the Woods Hole Oceanographic Institution.

Special note on letters following station numbers

Some station numbers are followed by letters and these letters may have two different meanings. If the letter follows the numerals with no intervening space, this letter is considered part of the station number and indicates a specific position for the station that differs from one having a different following letter. The letter U indicates that the station was made while underway. A space between the numerals and the following letter indicates that the letter identifies a subsample from the material obtained at the same station. If such subdivision of the sample was made, general information for the station is duplicated from the lines for subsample A.

CRUISE # The first 3 letters identify the ship as follows:

AB3	ALBATROSS III
AB4	ALBATROSS IV
ALV	ALVIN
AST	ASTERIAS
AT	ATLANTIS
AT2	ATLANTIS II
CB4	CAP'N BILL IV
CHN	CHAIN
DEL	DELAWARE
DOL	DOLPHIN
EXP	EXPLORER
GOS	GOSNOLD
LUL	LULU
NAR	NARRAGANSETT
VER	A.E. VERRILL

The numerals following the letters are the cruise number for that ship. For the ALBATROSS III, ALBATROSS IV, DELAWARE, and A.E. VERRILL cruises this number refers to a specific year; therefore, the date should be noted for these cruises as the same number may be repeated in a subsequent year.

DATE

DA Day as 01, 02, etc.
MO Month as 01 through 12
YR Year as 60 for 1960, etc.

TIME Local time as 0001 through 2400

TIME ZONE Local time zone as hours from Greenwich Time.

4 = Eastern Daylight Time
5 = Eastern Standard Time

GENERAL AREA Word description of location of station

AREA CODE See area code map, p.453

SHEET # Indicates on which of the three Atlantic Continental Margin maps the station is located.

1 = North sheet
2 = Middle sheet
3 = South sheet

METHOD OF NAVIGATION Number indicates method by which position was obtained

01 = Visual or radar
02 = Loran A
03 = Dead reckoning

POSITION

LAT Latitude in degrees, minutes and hundredths of minutes, North

LON Longitude in degrees, minutes and hundredths of minutes, West

CORRECTED DEPTH Depth of water in meters corrected for velocity of sound and keel depth of ship if a sonic depth, or corrected for winch reading if wire depth.

METHOD OF SOUNDING Method by which depth was determined

1 = Echo sounder
2 = Wire depth
3 = Depth taken from chart
4 = Depth gauge (submarine)

Positions of data within tape records

Code Line 110 Equipment and sediment description

Code line 110 contains information on the equipment used at the station and the shipboard description of the lithology of the sediment.

Explanation of headings

CODE # Indicates that the line contains the type of data characterized by code 110.

STATION # As described under code 100 above.

EQUIPMENT USED Word description of the type of equipment used in obtaining the sample.

EQUIPMENT CODE Numerical code for the equipment used

- 1 = Campbell grab with camera
- 2 = Campbell grab without camera
- 3 = Smith-McIntyre grab with camera
- 4 = Smith-McIntyre grab without camera
- 5 = Van Veen Grab
- 6 = Miniature Van Veen Grab
- 7 = Dietz-LaFond Snapper
- 8 = Scoopfish
- 10 = Pipe dredge
- 11 = Chain bag dredge, 33 inch
- 12 = Digby dredge
- 13 = Anchor dredge
- 14 = Pratt pipe dredge
- 15 = Pipe dredge, 3 inch
- 16 = Modified Pierce dredge
- 17 = Pierce dredge
- 18 = Chain bag dredge plus 3 inch pipe dredge
- 19 = Pratt pipe dredge plus 3 inch pipe dredge
- 20 = Gravity corer
- 21 = Piston corer
- 22 = Boomerang corer
- 30 = Box sampler
- 40 = Plankton net, 3/4 meter
- 41 = Plankton net, 1 meter
- 42 = Ring net
- 50 = 1 meter dredge
- 51 = Rocker dredge
- 52 = Scallop dredge
- 53 = Bottom skimmer
- 55 = Naturalist's dredge
- 60 = Edgerton camera
- 70 = Otter trawl
- 71 = Isaac-Kiddie midwater trawl
- 90 = Water pump sample
- 99 = Miscellaneous

In the above code 1-9 = grab samplers, 10-19 = dredges, 20-29 = corers, 30-39 = box samplers, 40-49 = plankton samplers, 50-59 = biological dredges, 60 Edgerton camera.

LITHOLOGY

Word description of the non-biologic part of the sample (see page 467 for list of abbreviations used). Where colors are described, a hyphen should be read as the word "to" meaning that the material varied between the colors given.

Code Line 120 Biological description

Code line 120 contains the shipboard description of the biological material observed in the sample.

Explanation of headings

- CODE # Indicates that the line contains the type of data characterized by code 120.
- STATION # As described under code 100 above.
- NO. OF DROPS Number of times the equipment was lowered to make a composite sample.
- VOL Volume in liters of total sample obtained from the drops made. A minus sign following a 1 indicates that less than 1 liter was collected.
- % PROCESSED Amount in percent of the total sample used in sieving through a 1 mm sieve to obtain sample for biologic analyses.
- BIOLOGY Word description of biological material in sample (See page 467 for list of abbreviations used).

Code Line 130 Miscellaneous sample-collection data

Code line 130 contains miscellaneous information about the sample or the station such as sediment color, water color, water temperature and comments.

Explanation of headings

CODE #	Indicates that the line contains the type of data characterized by code 130.
STATION #	As described under code 100 above.
COLOR (WET)	Munsell code number for the color of the wet sample.
ADD. CLR INF	If a 1 appears in this column, additional information on color is given under notes where more than one color was present in the sample.
FOREL	Indicates the color of the surface sea water by visual comparison with standards of the Forel yellow-blue series.
SECCHI	Depth in meters at which a standard Secchi disc is just visible from the surface.
PHO	Indicates type of photographs attempted as follows: 0 = No photographs attempted 1 = Black and white 2 = Color 3 = Black and white stereo 4 = Color stereo 5 = Mixed black and white and color stereo 6 = Mixed black and white and color, not stereo 7 = Edgerton camera lowering, black and white 8 = Camera sled 01 = Deck photo of sample only, black and white 02 = Deck photo of sample only, color 09 = Beach or land photo 11 = Both bottom and deck photo, black and white 12 = Both bottom and deck photo, first numeral indicates type of bottom photo, second numeral indicates type of deck photo according to single numeral code above. ...
NO. OF PHO	Number of usable photographs obtained. For Edgerton camera photographs, the numeral 1 symbolizes one camera lowering even though many photographs may have been obtained.
AIR TEM (C)	Temperature of the air in degrees celsius.
SURF TEM (C)	Temperature of the surface water in degrees celsius.

BT Indicates whether a bathythermograph was taken at the station
 0 = No bathythermograph
 1 = Bathythermograph taken

PLK Indicates whether a plankton tow was made at the station
 0 = No plankton tow
 1 = Plankton tow taken

ARC Indidates whether an archive sample was taken for the Smithsonian
 Sorting Center
 0 = No archive sample
 1 = Archive sample taken

SPC Indicates whether a special sample (usually 1 gallon) was taken as a
 type sample for special geological study
 0 = No special sample
 1 = Special geology sample taken

STR Indicates whether a sample is in storage at the Woods Hole
 Oceanographic Institution
 0 = No sample in storage
 blank = Sample in storage

NOTES Miscellaneous notes and comments concerning the station or the samples.

Code Line 140 Core data

Code line 140 contains information on the equipment and methods used for those stations where cores were taken.

Explanation of headings

CODE #	Indicates that the line contains the type of data characterized by code 140.
STATION #	As described under code line 100 above.
DEVICE	Device used (NODC codes, NODC, 1966, p. 12,13) 11 = gravity corer
CND	Condition of corer (NODC codes, NODC, 1966, p. 13) 1 = Generally good
WT KG	Weight of corer in kilograms
FREE FALL M	Free fall distance of the corer in meters
PEN. M	Penetration of the corer in meters
CORE DIAM CM	Diameter of the core in centimeters
CORE LNGTH CM	Total length of core obtained in centimeters
CND	Condition of core (NODC codes, NODC, 1966, p. 15) 1 = Entire core generally undisturbed 7 = No core
DIST POR CM	Length of disturbed portion in centimeters
SEC	Core sectioning (NODC codes, NODC, 1966, p. 15) 0 = Core unsectioned 8 = Core split
EXT	Extraction of core from barrel or liner (NODC codes, NODC, 1966, p. 16) blank = Unknown 1 = Removed from liner or barrel 2 = Not removed
VOL L	Volume in liters

PRSVTN Preservation technique

WA Preservation of water (NODC codes, NODC, 1966, p. 16)

 0 = No preservation technique applied, or unknown
 1 = Sealed to preserve entire water content

BC Preservation of bacteria (NODC codes, NODC, 1966, p. 16)

 0 = No preservative added, or unknown

ST Preservation of structure (NODC codes, NODC, 1966, p. 17)

 0 = No preservation technique applied, or unknown

Code Line 200 Grain Size Analyses

Code line 200 contains the weight percent of material contained in each size grade expressed in phi units (Krumbein, 1934). These weights were determined by pipetting (silt-clay range), settling tube (sand) (Schlee, 1966) and sieving (gravel).

Two numbers are given for each size grade: (1) the phi class, and following it, (2) the weight percent of material of larger particle size than this phi number but smaller than the next larger class. The phi number thus may be thought of as representing a sieve; the weight percent represents the amount of material retained on such a sieve. Table 1 gives examples of sizes in millimeters equivalent to units of phi (Size in mm. = $2^{-(\text{phi})}$).

Acknowledgements

The grain size analyses were made by John Schlee, assisted by J.R. Frothingham, Jr., and Carlyle R. Hayes.

Code Line 210 Gravel, sand, silt, and clay distribution

Code line 210 gives the weight percent of material in the gravel, sand, silt, and clay fractions of the samples. These values were calculated from the data of line 200 of the file (see introduction for line 200, p.). Four sets of values are given: (1) gravel, sand, silt, and clay using $\phi = 8$ (4 micrometers) as the dividing line between the silt and clay fractions; (2) sand, silt, and clay (less than 4 micrometers) recalculated to 100 percent on a gravel-free basis. The purpose of these values is to provide information on the gravel-free fraction, that part of the sample to which most of the other analytical work of the program applies; (3) gravel, sand, silt, and clay using $\phi = 9$ (2 micrometers) as the dividing line between silt and clay; (4) sand, silt, and clay (less than 2 micrometers) recalculated to 100 percent on a gravel free basis. The division between silt and clay at a particle diameter of 4 micrometers is used by most sedimentary petrologists, whereas the division at 2 micrometers is generally used by soil scientists and clay mineralogists.

Acknowledgements

The grain size analyses were made by John Schlee, assisted by J.R. Frothingham, Jr., and Carlyle R. Hayes.

Explanation of headings

CODE #	210 denotes gravel, sand, silt, and clay weight percents.
STATION #	As described under code line 100 above.
GVL	Gravel, particles greater than $\phi = -1$ (> 2 mm) in diameter.
SAND	Sand, particles between $\phi = -1$ and $\phi = 4$ (2 mm to 0.0625 mm) in diameter.
SILT	Silt, particles between $\phi = 4$ and $\phi = 8$ (0.0625 mm to 0.0039 mm) for the first two sets of data, and between $\phi = 4$ and $\phi = 9$ (0.0625 mm to 0.00195 mm) for the second two sets of data.
CLAY <4MU	Clay, particles less than $\phi = 8$ (0.0039 mm - approximately 4 micrometers) in diameter.
CLAY <2MU	Clay, particles less than $\phi = 9$ (0.00195 mm = approximately 2 micrometers) in diameter.
*	An asterisk following the line of data indicates that the values may not agree with the data given in line 200 because insufficient amounts of gravel were available to make sieve analyses of sizes within the gravel fraction.

Code Line 250 Sediment grain-size parameters

Code line 250 gives the sediment grain-size parameters of the samples. These parameters were calculated from the data of line 200 by a computer program designed by Schlee and Webster (1967).

Acknowledgements

These analyses were made by John Schlee, J.R. Frothingham, Jr., and Carlyle R. Hayes.

Explanations of headings

CODE #	250 denotes sediment grain-size parameters
STATION #	As described under code line 100 above
MODE 1	Strongest mode in phi units ^{1/}
MODE S	Mode strength of strongest mode ^{1/}
MODE 2	Second strongest mode in phi units ^{1/}
MODE S	Mode strength of 2nd mode ^{1/}
MODE 3	Third strongest mode in phi units ^{1/}
MODE S	Mode strength of 3rd mode ^{1/}
NO OF MODES	Number of modes
MEDIAN	Median grain diameter in phi units ^{1/}
MEAN	Mean grain diameter in phi units ^{1/}
STANDARD DEV.	Standard deviation of grain-size distribution in phi units (sorting) ^{1/}
SKEWNESS	Skewness of grain-size distribution ^{1/}
KURTOSIS	Kurtosis of grain-size distribution ^{1/}
SEDIMENT NAME	Name describing the sediment ^{2/}
CURVE TYPE	Code for shape of curve ^{3/}

^{1/} See Schlee and Webster (1967) and references therein

^{2/} See Shepard (1954)

^{3/} See Schlee (in preparation)

Code Line 300 Sand fraction composition (Nova Scotia to New Jersey)

Code line 300 gives the composition of the sand fraction (.062 - 2.0 mm) in percent by weight of rock fragments, quartz and feldspar, dark minerals, glauconite, mica, foraminifera, and shell material. These weights were estimated by examination with a binocular microscope. Traces of any of the components are arbitrarily assigned values of 0.1 percent. Quantities less than 1 percent but more than traces are assigned values of 0.5 percent.

Acknowledgements

The sand fraction analyses were made by James V.A. Trumbull.

Explanations of headings

CODE # 300 denotes sand fraction composition.

STATION # As described under code line 100 above.

ROCK FRAGMENTS Weight percent of rock fragments.

QUARTZ Weight percent of quartz grains plus feldspar grains.
FELDSPAR

DARK MINERALS Weight percent of minerals dark in color.

GLAUCONITE Weight percent of glauconite.

MICA Weight percent of both black and light mica.

FORAMINIFERA Weight percent of foraminiferal tests or fragments.

SHELL Weight percent of mollusc shells or fragments.

Positions of data within tape records

Code Line 310 Carbonate fraction composition (New Jersey to Key West)

This line gives the composition of the calcium carbonate components within the total sand and gravel fraction (>0.062 mm). The amount of each component was determined by point counts under either the binocular or the petrographic microscope. For some samples estimates of abundance rather than point counts were made. These estimates are coded as: F = flood = $>50\%$, A = abundant = $25\%-50\%$, C = common = $5\%-25\%$, and R = rare = $<5\%$ and are given two character positions to the right of the positions in which the percentages obtained by point counts are given.

Acknowledgements

The carbonate fraction analyses were made by John D. Milliman.

Explanation of headings

CODE #	310 denotes carbonate fraction composition.
STATION #	As described under code line 100 above.
CACO ₃	Amount of CACO ₃ , in percent, determined by point count.
MIC	Type of microscope used: B = Binocular microscope P = Petrographic microscope
MLSK	Mollusk shells or fragments of shells
ECH	Echinoids or fragments
BNTH F	Benthonic foraminifers or fragments
PLKT F	Planktonic foraminifers or fragments
BRYZ	Bryozoans or fragments
SERP	Serpulid worm tubes or fragments
BRNCL	Barnacle plates or fragments
COR ALG	Coralline algae
HLMD	<u>Hallimeda</u> plates or fragments
CORAL	Coral
PLTD	Pelletoids
OID	Ooids
ENCR & ALTD	Encrusted and altered material
LTH	Lithoclasts

UKNWN Unknown carbonate material

MISC Miscellaneous, types of carbonate material other than those listed

ASSEMBLAGE Assemblages defined on the basis of the major carbonate components.
CODE

Letter codes identifying type of carbonate assemblage:

M = Mollusk
ME = Echinoid - Mollusk
BFM = Benthonic foraminifera - mollusk
BM = Barnacle - mollusk
BC = Barnacle - coralline algae
OP = Oolite - pelletoid
OTC = Outcrop
CR = Coral reef
L = Lithoclast
PF = Planktonic foraminifera
PFC = Planktonic foraminifera-coral
PFP = Planktonic foraminifera-pteropod
REW = Reworked
MX = Mixed assemblages

Code Line 320 Sand fraction 125-250 mm, non-carbonate fraction (New Jersey to Key West)

This line gives the composition of the non-carbonate part of the 125-250 mm sand fraction. The amounts of each type of material in percent were determined by point counts under the binocular microscope. Feldspar type was determined by staining using the Hayes and Klugman (1959) method.

Acknowledgements

The non-carbonate fraction analyses were made by John D. Milliman.

Explanation of headings

CODE # 320 denotes 125-250 mm, non-carbonate fraction composition.

STATION # As described under code line 100 above.

The following components are given in percent (by pt. count)

QUARTZ	Quartz
K FLDSP	Potassium feldspar
PLAG. FLDSP	Plagioclase feldspar
MICA	Mica
HVY MNRLS	Heavy minerals
PHSPHT	Phosphorite
GLAUC	Glauconite
DIATOMS	Diatoms
SPCLS	Spicules
RDLRNS	Radiolarians
WOOD & PLNT FIB	Wood and plant fibers
OTHER	Other materials

Code Lines 400 and 401 CaCO₃, carbon and nitrogen content

Line 400 gives those constituents of organic origin in the samples. Calcium carbonate content was determined by the method described by Hulsemann (1966). Carbon content was determined by a gasometric method similar to that described by Kolpack and Bell (1968). Nitrogen content was determined by volumetric determination of aminoid nitrogen by the micro Kjeldahl method of Kabat and Mayer (1948). Line 401 gives data for reruns of those samples indicated by *.

Acknowledgements

The calcium carbonate, carbon, and nitrogen determinations were made under the direction of Jobst Hulsemann and Susan Kadar, assisted by Lois Toner, Madalyn Hamilton, and Faith Harrington.

Explanation of headings

CODE #	400 denotes content of constituents of organic origin.
STATION #	As described under code line 100 above.
CACO3	Calcium carbonate content in percent.
CARBON OF CACO3	Carbon content, in percent, calculated from calcium carbonate content.
ORGANIC CARBON MEASURED	Carbon content, in percent, measured by gasometric method in samples after removal of CaCO ₃ by acid treatment.
TOTAL CARBON MEASURED	Carbon content, in percent, measured by gasometric method in whole sample.
ORGANIC CARBON CALCULATED	Total carbon measured less carbon of CaCO ₃ , in percent.
TOTAL CARBON CALCULATED	Organic carbon, measured, plus carbon of CaCO ₃ , in percent.
KJELDAHL NITROGEN	Nitrogen, in percent, measured by micro kjeldahl method.
ORGANIC CARBON/ NITROGEN	Ratio of organic carbon content to nitrogen content.

Code Line 401 Reruns of organic carbon, measured

Code line 401 gives rerun analyses of measured organic carbon. Headings are the same as those described under code line 400 above.

Code Line 450 Natural gamma radioactivity

This line contains values for natural gamma radioactivity in each sample. These values are expressed as counts per minute per gram (CPM/G). Raw values for number of counts were corrected for sample weight, volume, type of container, and background count. The corrected value together with location coordinates and amounts of silt and clay are given in this line.

Acknowledgements

The analyses were performed by Claire L. Schelske, School of Public Health, University of Michigan, Ann Arbor, Michigan. Corrections to the raw data were made by a computer program written by John C. Hathaway.

Explanations of headings

CODE # 450 denotes natural gamma radioactivity analyses.

STATION # As described under code line 100.

LATITUDE Latitude (North) in degrees, minutes and tenths or hundredths of minutes (repeat of values from line 100).

LONGITUDE Longitude (west) in degrees, minutes and tenths or hundredths of minutes (repeat of values from line 100).

SILT % Percent silt (4-62 μ m) (from line 210).

CLAY % Percent clay (<4 μ m) (from line 210).

ACTIVITY CPM/G Natural gamma radioactivity in counts per minute per gram.

Code Line 500 X-ray diffraction analyses (bulk samples <2 mm)

This line contains the weight percent of minerals detected by x-ray powder diffraction analyses of the bulk fraction less than 2 mm in diameter. Two methods of computer analysis were used. Method 1 (indicated by 1 in column 17 following the station number) consisted of hand measurement of the intensities of specified key peaks on x-ray diffraction strip charts and computer calculation of estimates of the quantity of each mineral in the sample. This method was used for samples from the north sheet covering the region from Nova Scotia to New Jersey. Method 2 (indicated by 2 in column 17 following the station number) employed computer analysis of punched paper tapes produced directly by the x-ray diffractometer. The computer program located all diffraction peaks in the pattern, calculated their intensities, and made qualitative analyses of the minerals present by comparison of the peaks with a library of standards. The program then made estimates of the quantity of each mineral by the solution of a series of simultaneous equations involving the intensities of all the peaks and calculated mass absorption coefficients. A complete description of the method will be published elsewhere (Hathaway, in preparation).

Misalignment of some specimens, or malfunction of the paper tape equipment, produced spurious results. For these samples visual estimates were made, and are indicated by the number 3 in column 17.

Acknowledgements

The x-ray diffraction analyses were made by John C. Hathaway assisted by Richard A. Tagg, Peter F. McFarlin, Charlisa Head, and Judy M. Aydelette. The computer programs were written by John C. Hathaway.

Explanations of headings

CODE # 500 denotes x-ray diffraction analyses of bulk samples.

STATION # As described under code line 100.

COL. 17 Numbers in this column indicate the following:

- 1 . Analysis made by hand measurement of peaks and intensities.
- 2 Analysis made entirely by computer.
- 3 Analysis made by visual estimate or revision of analysis 2.

The following are the minerals analyzed for; amounts are given in percent.

QUARTZ Quartz

PLAG FSPR Plagioclase feldspar

K FSPR Potassium feldspar

CALC Calcite

MG CALC Magnesium calcite. A number with no decimal point following the magnesium calcite value is the mol. percent of MgCO₃ in the structure.

ARAG Aragonite

LR SLCT Total layer silicates. This amount includes mica, chlorite, kaolinite, montmorillonite, vermiculite, chamosite, glauconite and mixed layered assemblages of the foregoing.

HRNBL Hornblende or amphibole

PRYT Pyrite

APAT Apatite

DOLMT Dolomite

OTHER * indicates that other minerals are present or that there are comments. These minerals and comments are listed in a table following the line 500 data.

CaCO₃ Total calcium carbonate. This amount is the sum of calcite Mg-calcite and aragonite.

ARAG/CAL Ratio of aragonite to calcite. If blank, no calcite is present.

FELDSP Total feldspar in percent. This amount is the sum of plagioclase and potassium feldspar.

FEL/QTZ Ratio of total feldspar to quartz.

Code Line 505 Minerals in clay fraction

This line contains estimates of the amounts of minerals in the clay fraction (less than 2 mm) of selected samples. The fractions were obtained by repeated centrifuging of suspensions of each sample for periods of time calculated to remove particles greater than 2 μ m (Hathaway, 1956). The resulting clay suspensions were drawn by vacuum as oriented aggregates on ceramic tiles or silver membrane filters and analyzed by x-ray diffractometer. Some samples were treated with 1:4 acetic acid to remove calcium carbonate. These samples are indicated by "H+" following the station number. X-ray diffractometer patterns were made after air drying, after ethylene glycol treatment and after heating to 400°C and 550°C respectively. Visual estimates of the relative amounts of the various minerals present are listed to the nearest 10 percent.

Acknowledgements

The analyses were made by John C. Hathaway, with the assistance of Richard A. Tagg, Peter F. McFarlin, Charlisa Head, and Judy M. Aydelette.

Explanation of headings

CODE # 505 denotes mineralogy of the clay fraction.

STATION # As described under line 100 above. H+ in columns 14 and 15 indicate residues from acetic acid treatment.

Amounts of each mineral are given to the nearest 10 percent or as TR if less than 10 percent.

MNT	Montmorillonite
CHL	Chlorite
DVM	Dioctahedral vermiculite
M-I	Mixed layered montmorillonite-illite (In a few samples vermiculite-illite)
M-C	Mixed layered montmorillonite (or vermiculite) - chlorite
ILL	Illite
KAO	Kaolinite
GIB	Gibbsite
QTZ	Quartz
FLD	Feldspar
CAL	Calcite
ARAG	Aragonite
HBL	Hornblende or other amphibole

APT Apatite
DOL Dolomite

Code Line 560 Heavy mineral analyses

This line contains analyses of the heavy mineral fraction of selected samples from the north sheet, southern Nova Scotia to northern New Jersey. The methods of sample preparation and discussion of the results are given in Ross (1970).

Acknowledgements

The heavy mineral analyses were made by David A. Ross.

Explanation of headings

CODE # 560 denotes analyses of the heavy mineral fraction.

STATION # As described under line 100 above.

WT % MINERALS

HEAVY Percent by weight of heavy minerals in the sand fraction
(2mm - 62 μ m) of the whole sample.

OPAQ Percent by weight of opaque minerals in the heavy mineral fraction.

ALTD Percent by weight of altered minerals grains in the heavy mineral
fraction.

NON OPAQ Percent by weight of non-opaque heavy mineral grains. * indicates
that less than 100 grains were counted.

Code Lines 600 and 620 Gravel analyses

Code lines 600 and 620 contain descriptions of the gravel fraction of the samples. Line 600 gives the results of pebble counts on specified size fractions. Line 620 gives a general description of specific features present in the gravel. For detailed discussion of these gravels see Schlee and Pratt (1970).

Acknowledgements

The pebble identifications and counts were made by John Schlee and Richard M. Pratt. The data records were coded by J.F. Jones. Mary Hunt wrote the computer program for decoding and listing the analyses.

Explanation of headings

CODE #	600 denotes pebble identifications and counts. 620 denotes descriptive features of the gravel.
STATION #	As described under code line 100 above.
SIZE	Size limits of gravel fraction analyzed, usually 8-16 mm and greater than 64 mm.
COUNT	Line 600 only - The number of pebbles of indicated type in a count of 100 pebbles of the 8-16 mm fraction, or the total number of pebbles of indicated type in the fraction greater than 64 mm.
DESCRIPTION	In line 600 - the type of rock with appropriate modifiers. In line 620 - specific features or materials accompanying the gravel fraction.

Positions of data within tape record

<u>Code Line</u>	<u>Data</u>	<u>Character Positions</u>	<u>Fortran Mode</u>	<u>No. of Characters</u>

Code Line 700 Chemical analyses, major elements

Code line 700 contains chemical analyses of the major elements of selected samples. With the exception of those from the Blake Plateau, the samples were selected to illustrate the composition of river borne sediment and sea bottom sediment representing traverses across the continental shelf.

Major element determinations were made by fluxing the samples with lithium tetraborate at 1000°C, grinding the resulting glass, mixing with graphite and pressing the mixture into pellets. The pellets were then excited by a high voltage spark, and the elements present were determined by an emission spectrometer. The method is a modification of a procedure by Landergren, Muld and Rajandi (1964).

Fe₂O₃ and MnO₂ values represent the total for all oxidation states of these elements. NiO and CuO values below .005 percent are from the trace element analyses (see code line 710).

Where ignition loss at 1000°C is available, a sum has been calculated using Mn₃O₄ as the stable species at that temperature. Correction has also been made for fluorine in phosphate containing rocks. In some samples dominant components such as SiO₂ and CaO were determined by difference. This method usually yields more precise values for very high concentration levels. Such analyses are indicated by an asterisk following the sum. A few of the CaO values close to 50 percent that were not so corrected appear to be too high.

Inhomogeneity owing to small sample size may exist between the major element, trace element, and ignition loss subsamples.

Minus signs that precede values indicate that the amount detected is less than the value shown.

Acknowledgements

The analyses were made by Frank T. Manheim, assisted by Susan Kadar, Heidi Richards, Raymond Angona, and Lois Toner.

Explanations of headings

CODE # 700 denotes chemical analyses, major elements

STATION # As described for code line 100

Major elements as oxides, in percent.

SI02 SiO₂

AL203 Al₂O₃

FE203 Fe₂O₃ (value includes Fe⁺²)

TI02 TiO₂

MN02 MnO₂

CA0 CaO

MGO MgO

SRO	SrO
K2O	K ₂ O
NA2O	Na ₂ O
P2O5	P ₂ O ₅
CO2	CO ₂
IGN. LOSS 500C	Ignition loss at 500° celcius
1000C	Ignition loss at 1000° celcius
NIO	NiO
CUO	CuO
F-O	Fluorine less equivalent oxygen (correction for phosphorite bearing samples)
SUM	Total of the elements reported. An asterisk indicates that SiO ₂ or CaO were determined by difference. Lack of a sum indicates that no ignition loss determination was performed.

List of Area Codes

<u>Area Code</u>	<u>Description</u>
1	Scotian Shelf
2	South of Nova Scotia
3	Bay of Fundy
4	Northern Maine coast
5	Northern Gulf of Maine
6	Browns Bank
7	Continental Slope South of Nova Scotia
8	Northeast Channel
9	Georges Basin Area
10	Central Gulf of Maine
11	Central Maine Coast
12	Northern Massachusetts and New Hampshire Coast
13	Southern Gulf of Maine
14	Georges Bank
15	Continental Slope South of Georges Bank
16	Continental Slope South of Great South Channel
17	Great South Channel
18	Nantucket Shoals
19	Nantucket and Vineyard Sounds and Buzzards Bay
20	Cape Cod Bay
21	Massachusetts Bay
22	Narragansett Bay and Block Island Sound
23	Shelf South of New England
24	Slope South of New England
25	Shelf South of Long Island
26	Long Island Sound
27	Shelf East of New Jersey
28	Slope East of New Jersey
29	Middle Atlantic Continental Rise
30	New England Continental Rise
31	New Jersey Coast
32	Delaware Bay
33	Delaware Coast
34	Shelf East of Delaware
35	Slope East of Delaware
36	Chesapeake Bay
37	Albemarle and Pamlico Sounds
38	Shelf East of Virginia and North Carolina
39	Slope East of Virginia and North Carolina
40	Southern Continental Rise
41	Blake Escarpment, Ridge, and Spur
42	Florida-Hatteras Slope off North Carolina
43	Shelf off North Carolina
44	South Carolina Coast
45	Shelf off South Carolina
46	Florida-Hatteras Slope off South Carolina
47	Northern Blake Plateau
48	Inner Blake Plateau

<u>Area Code</u>	<u>Description</u>
49	Florida Hatteras Slope off Georgia
50	Shelf off Georgia
51	Georgia Coast
52	Northern Florida Coast
53	Northern Florida Shelf
54	Florida-Hatteras Slope off Northern Florida
55	Central Florida Coast
56	Central Florida Shelf
57	Florida-Hatteras Slope off Central Florida
58	Northern Straits of Florida
59	Bahama Banks
60	Southern Straits of Florida
61	Southern Florida-Hatteras Slope
62	Shelf off Florida Keys
63	Florida Bay
64	Outer Blake Plateau

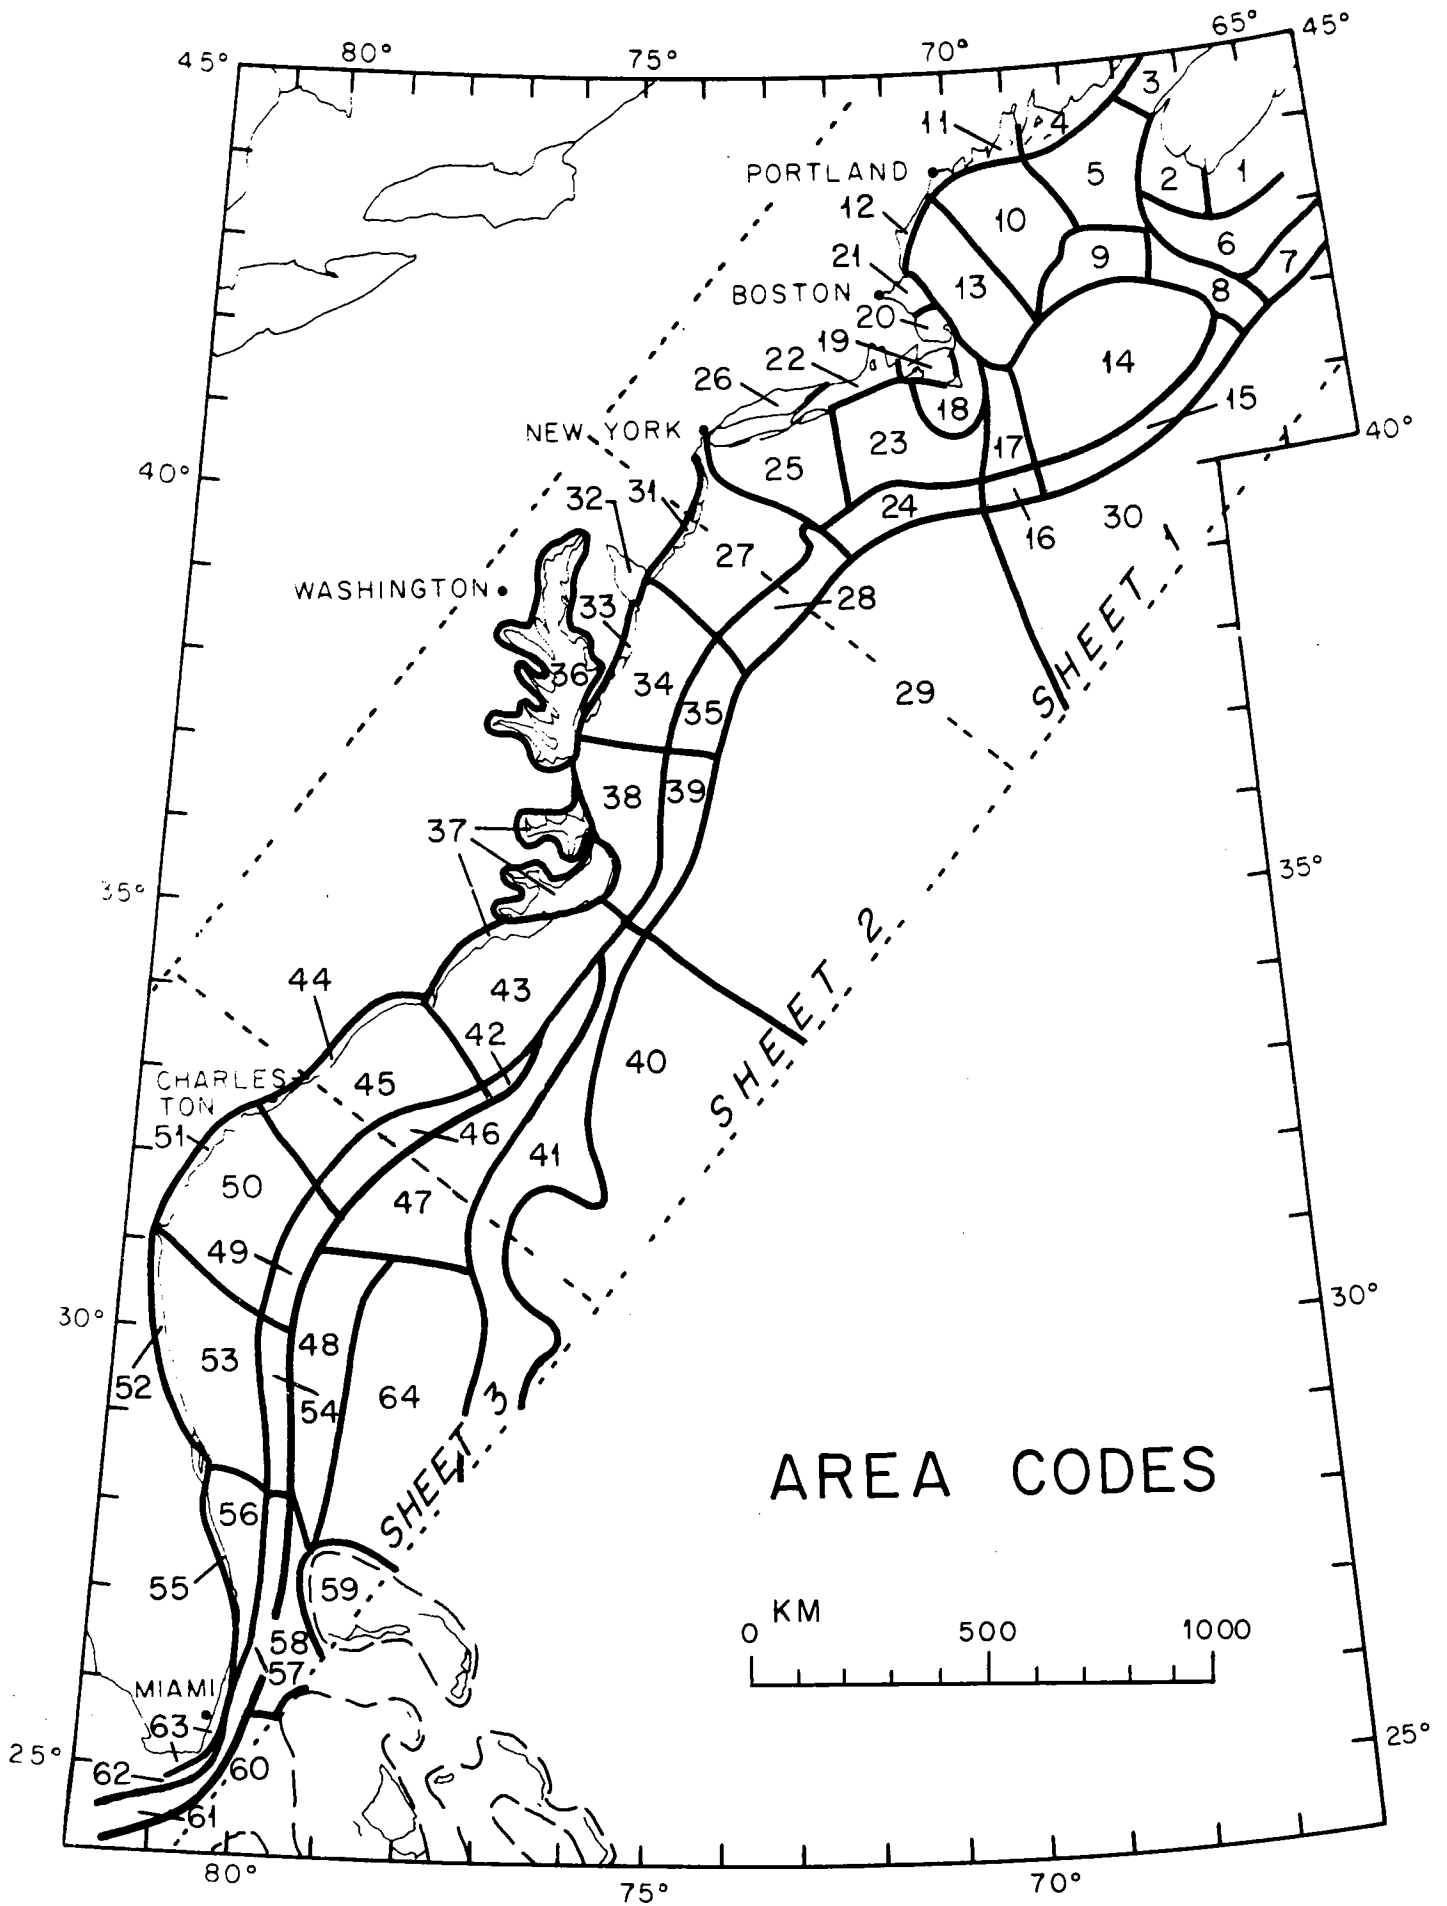

Figure 1. Area Code Index Map

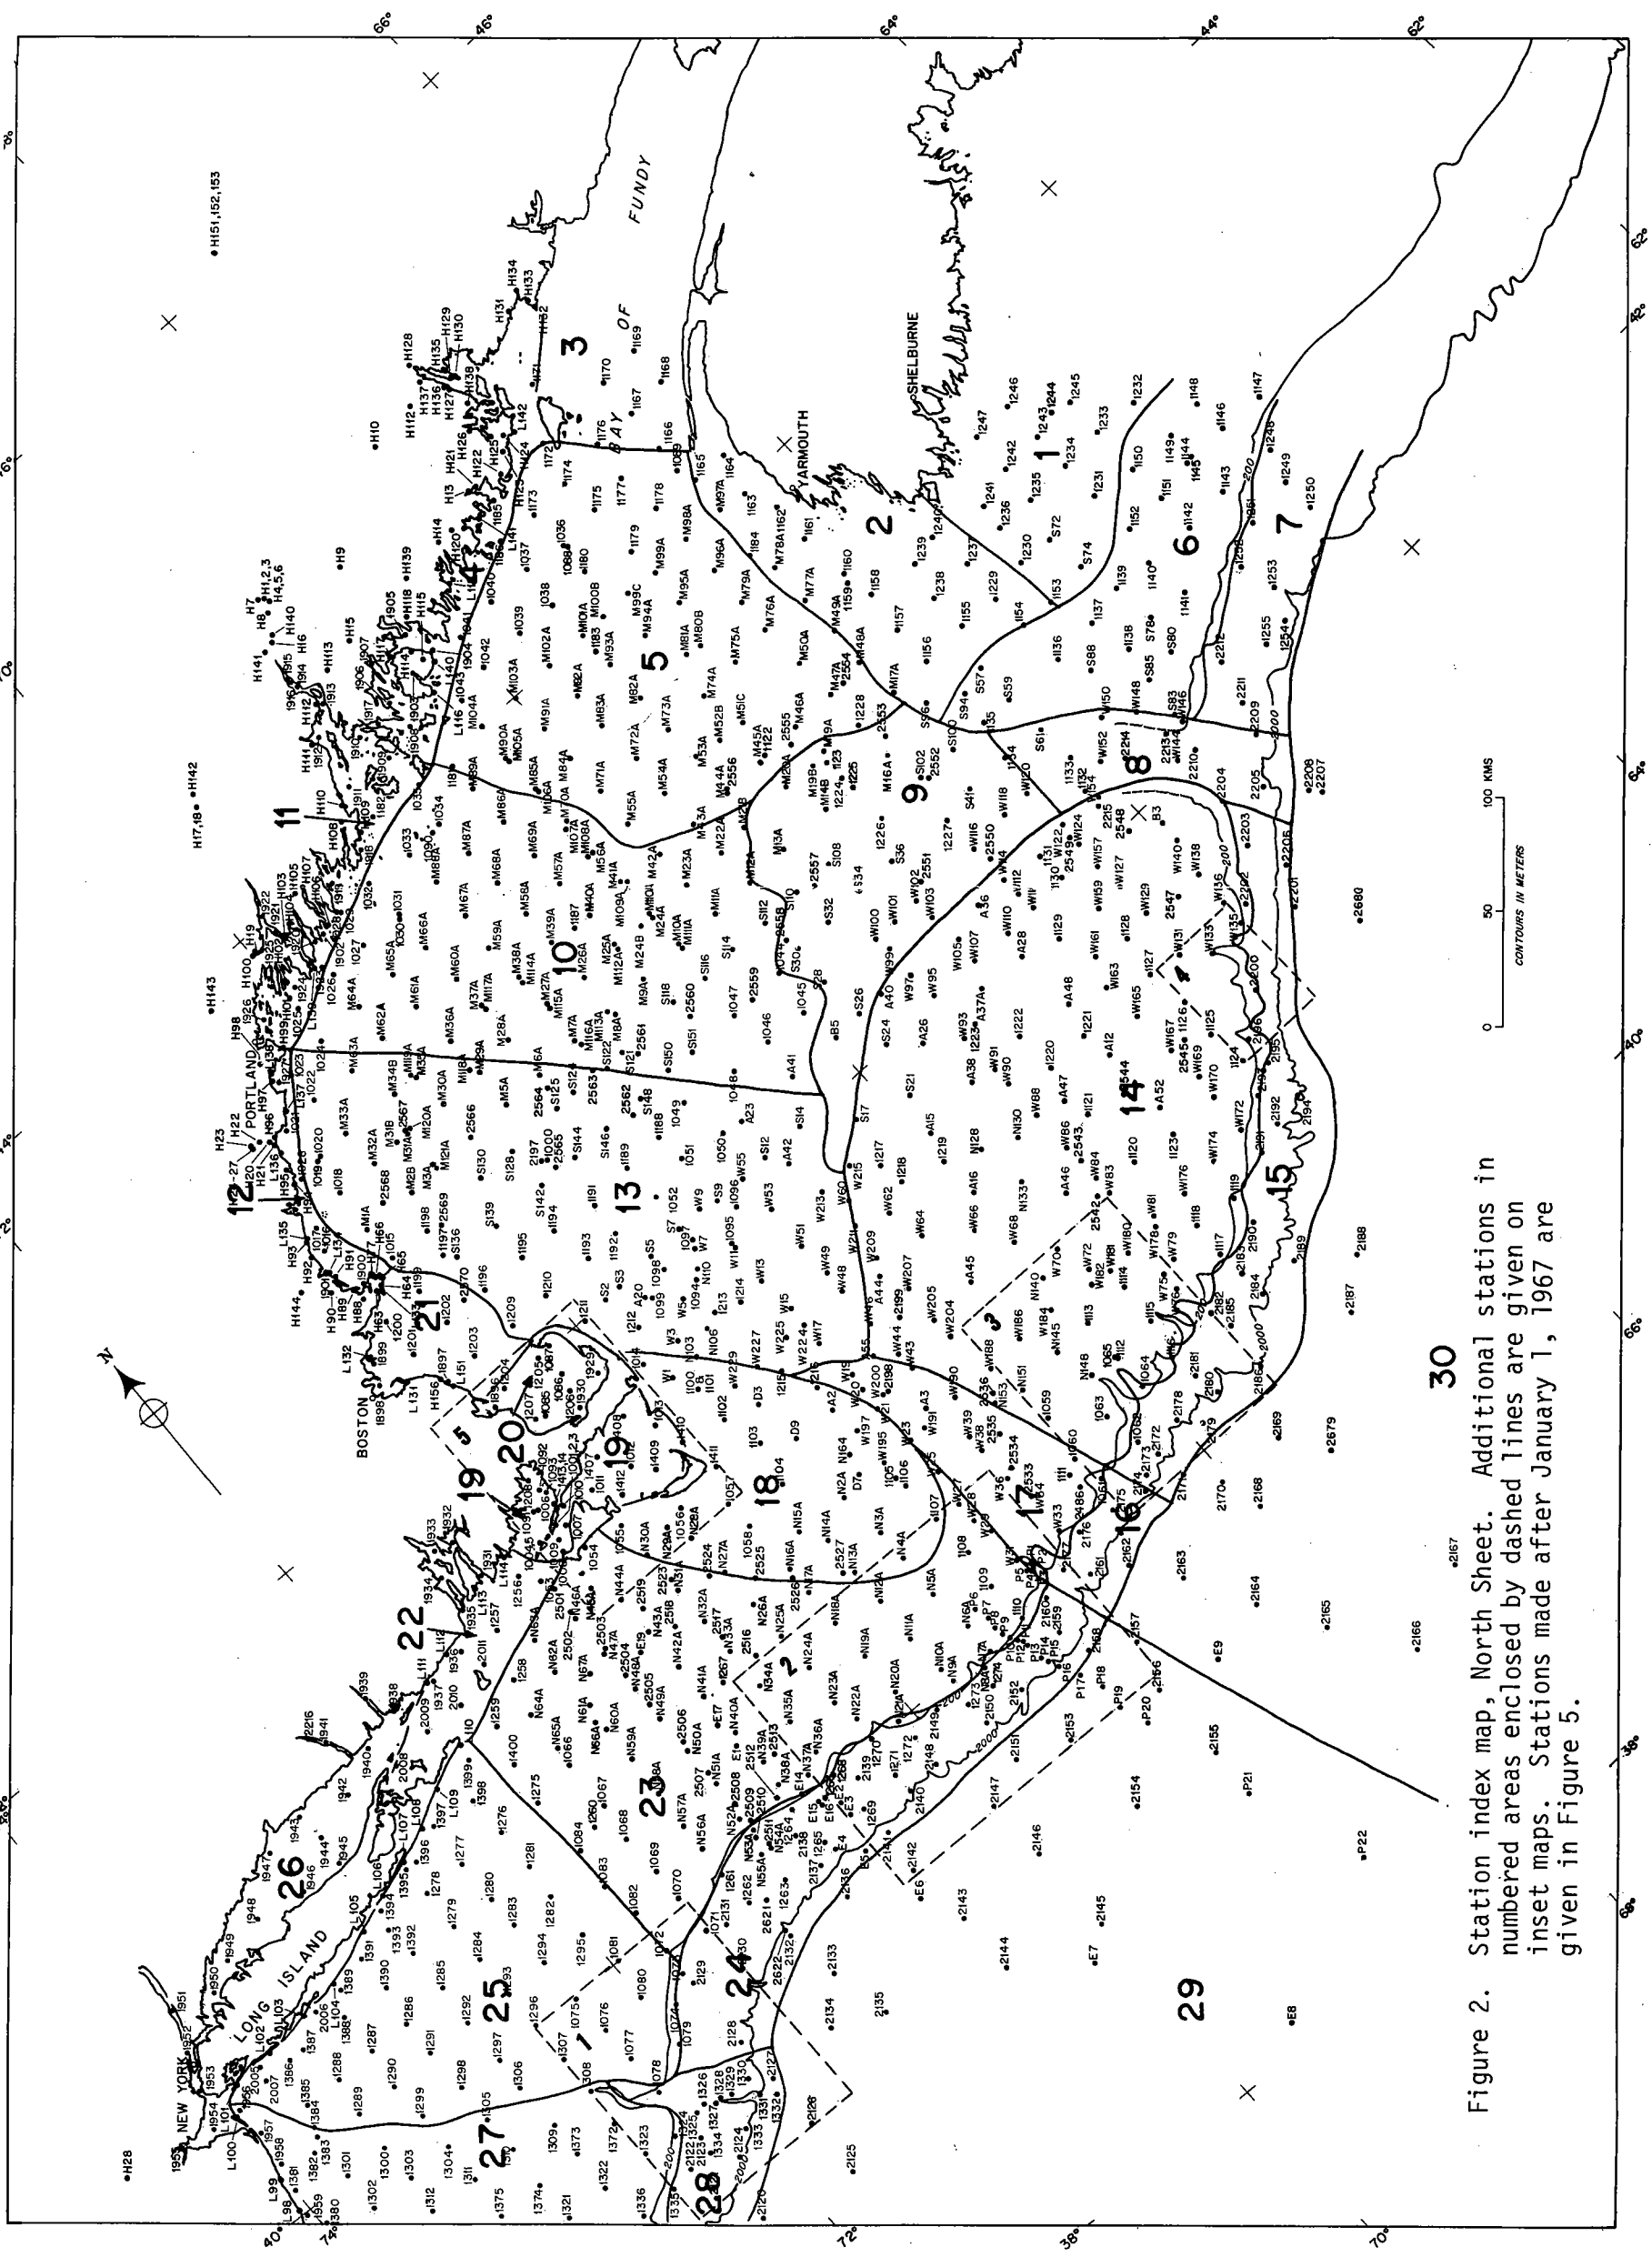

Figure 2. Station index map, North Sheet. Additional stations in numbered areas enclosed by dashed lines are given on inset maps. Stations made after January 1, 1967 are given in Figure 5.

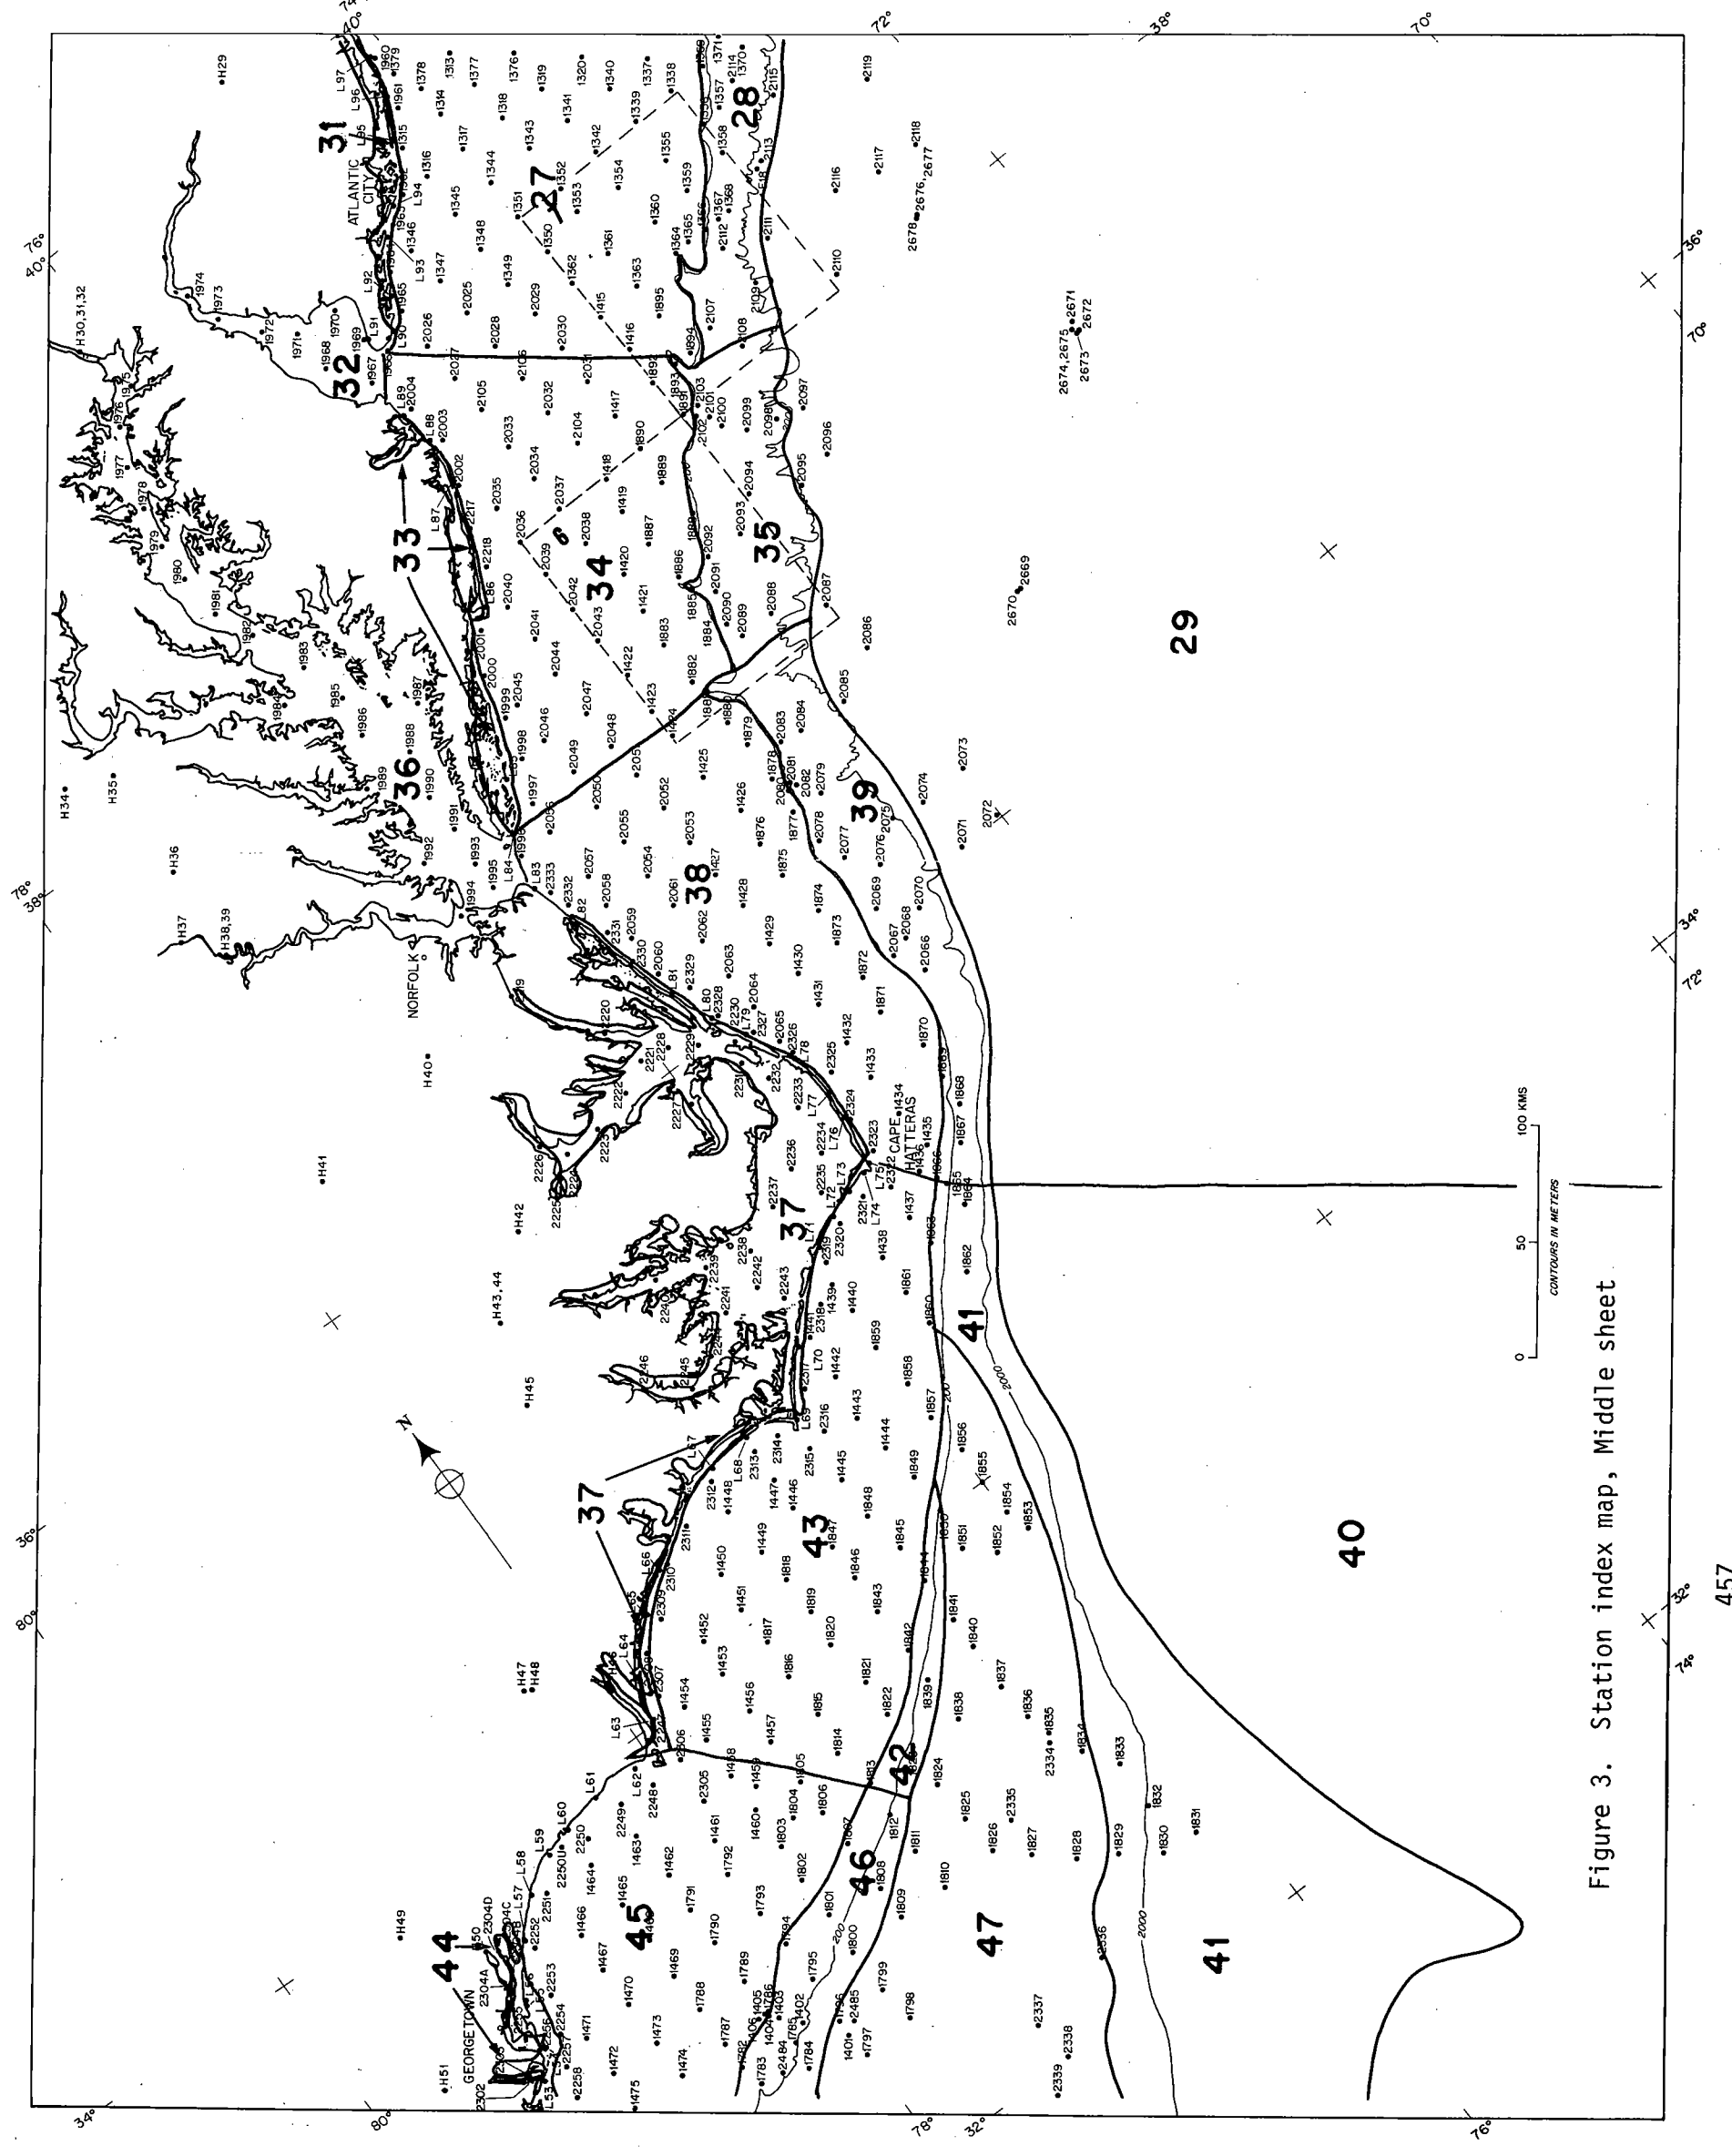

Figure 3. Station index map, Middle sheet

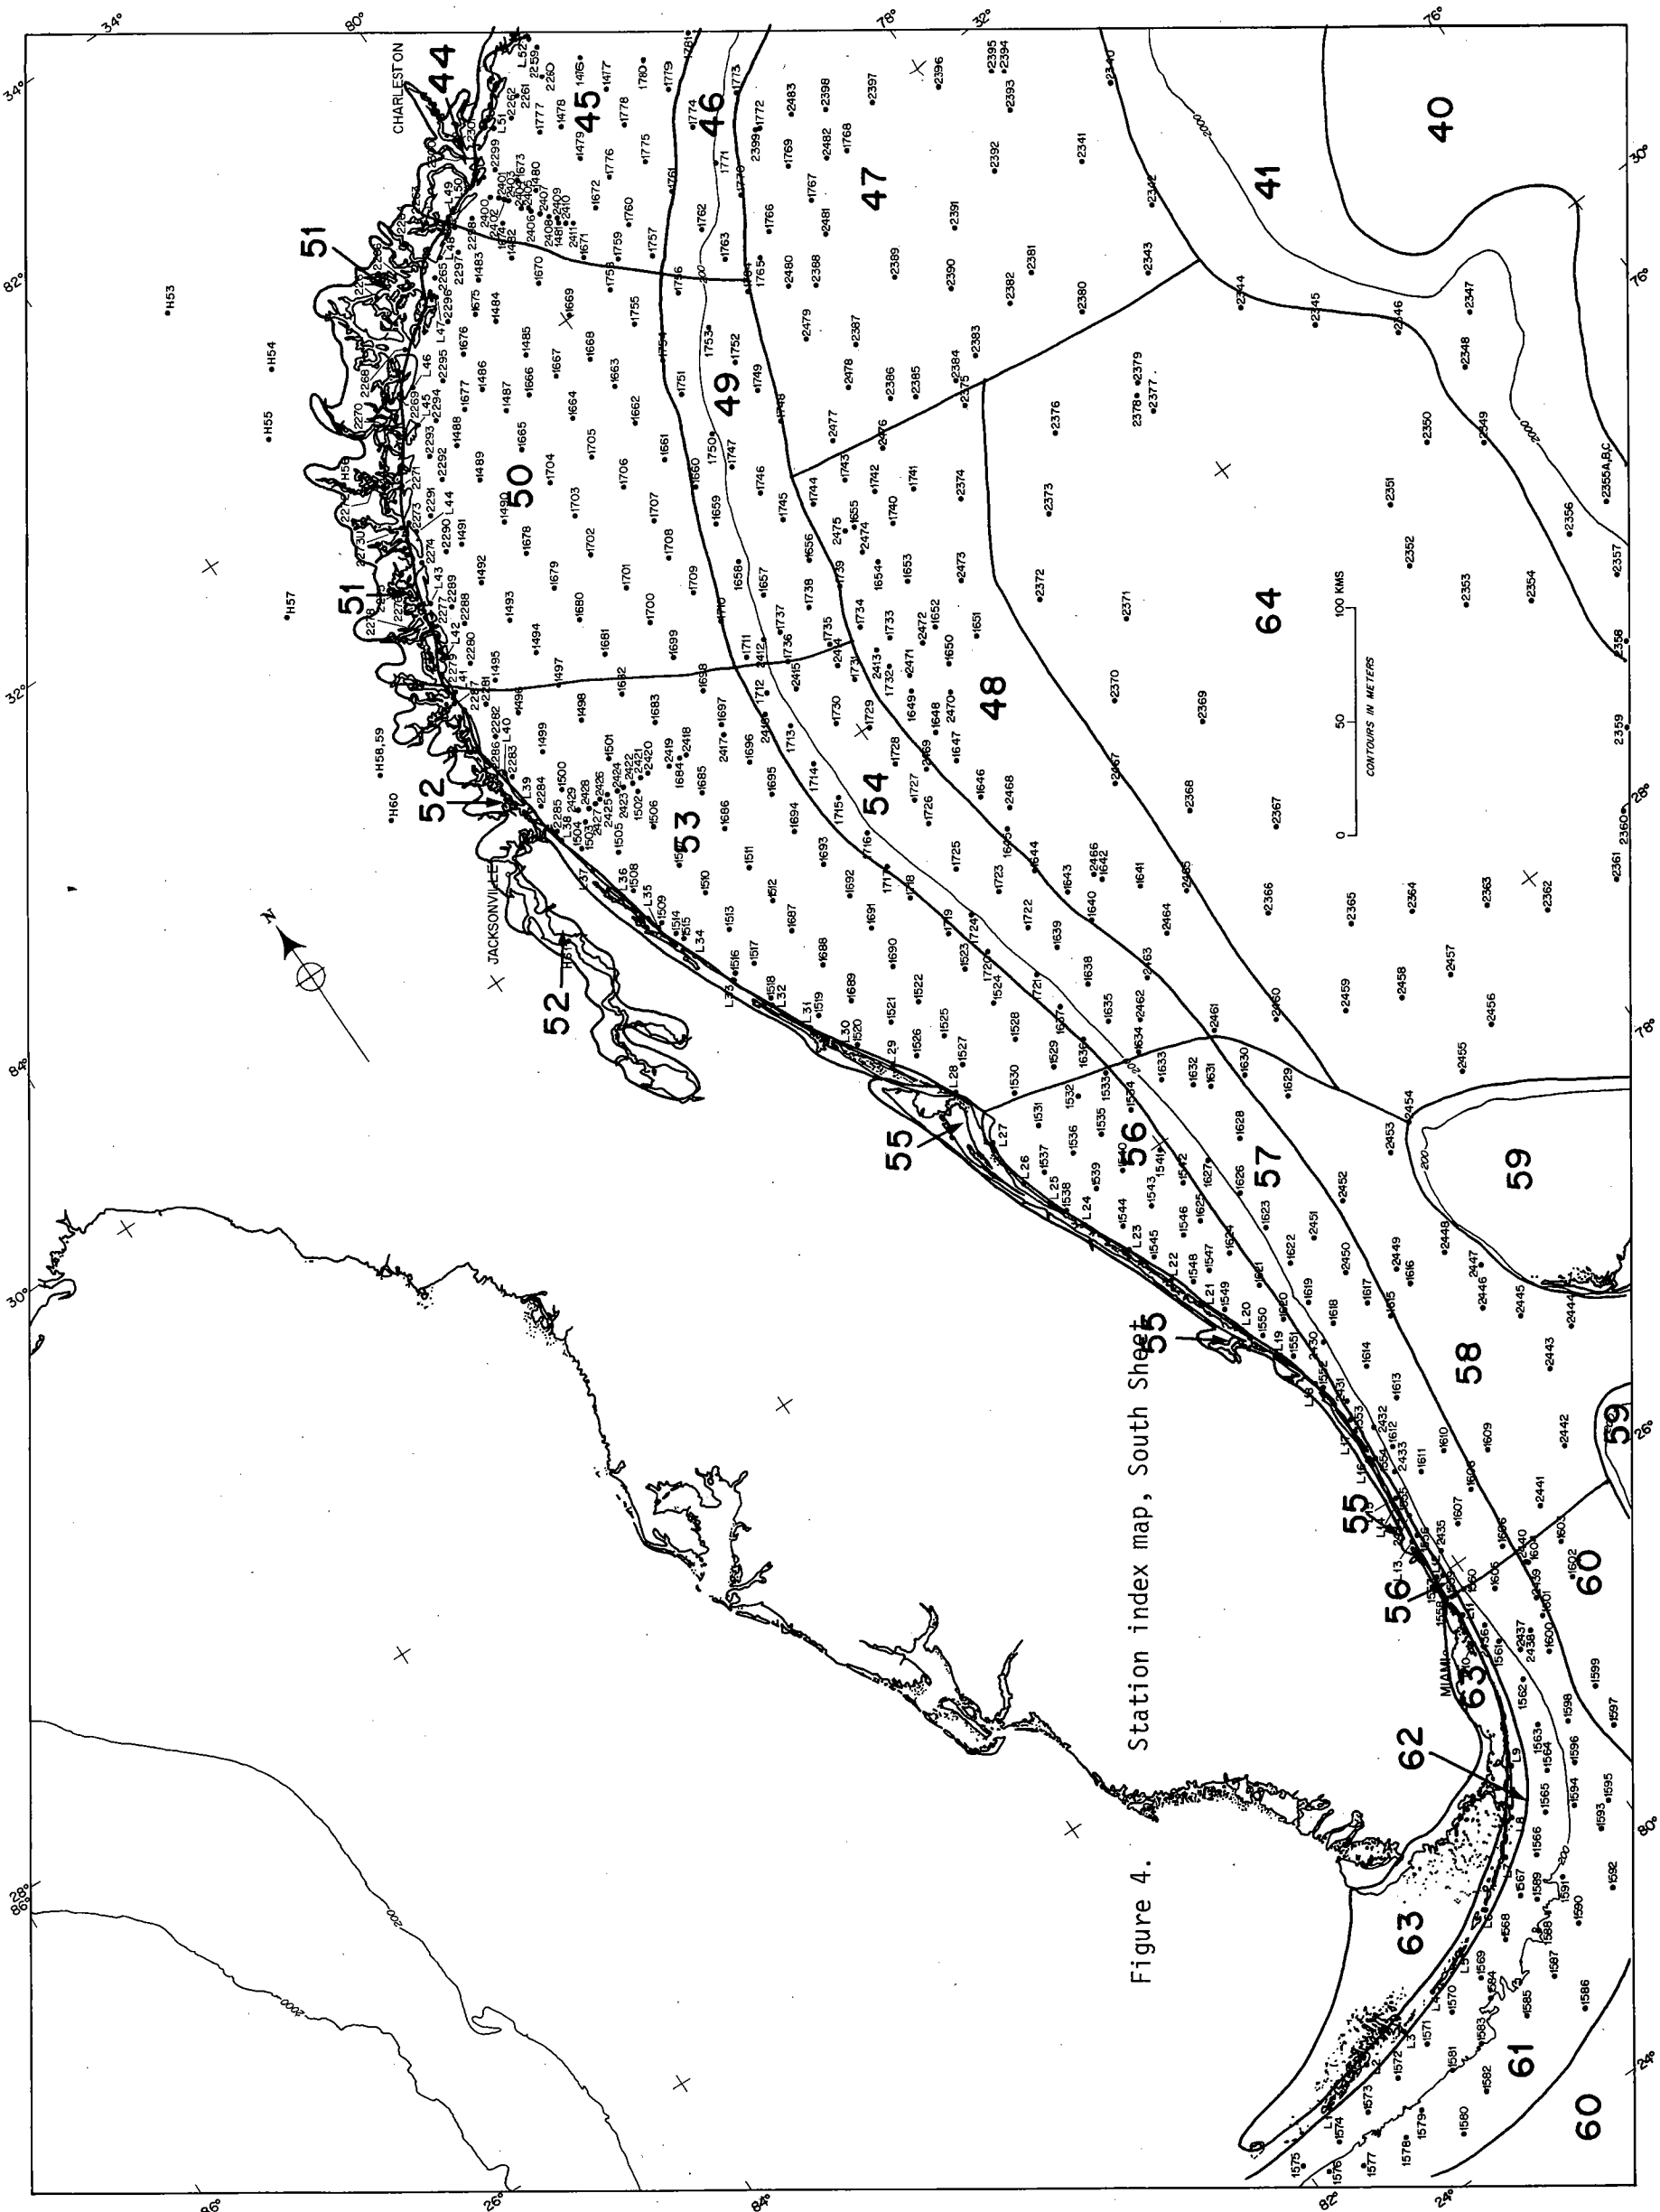

Figure 4. Station index map, South Sheet

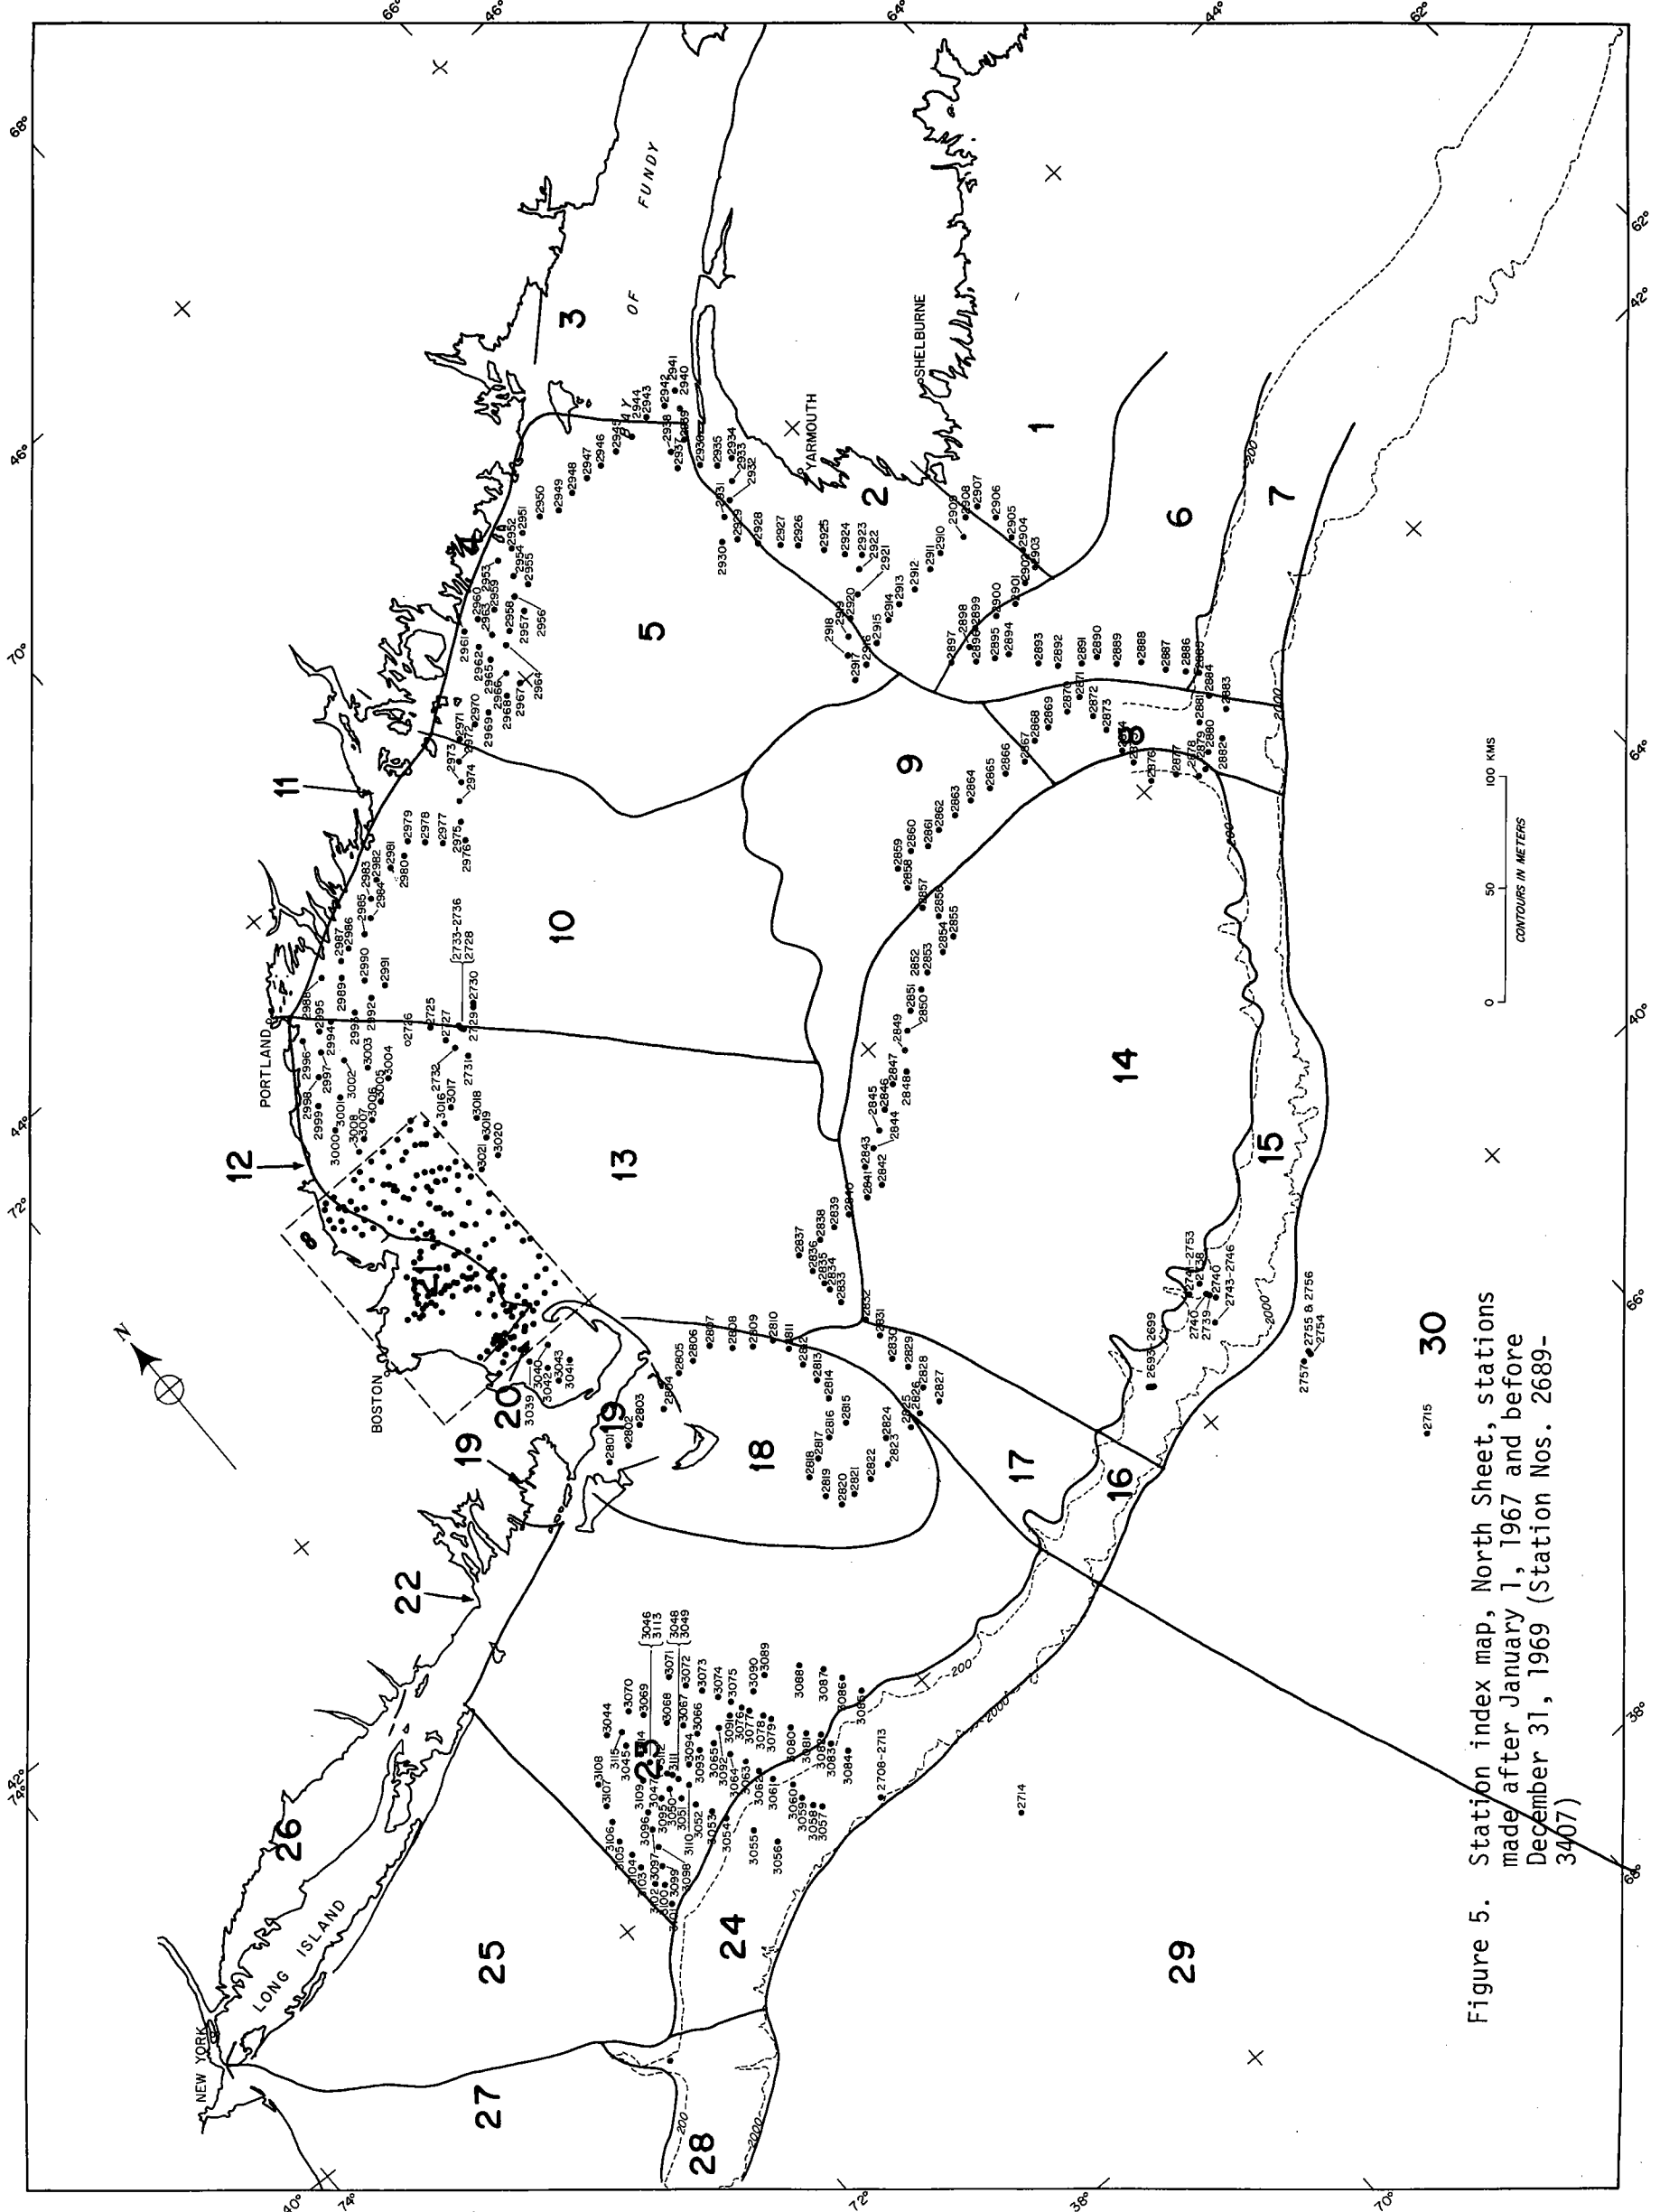

Figure 5. Station index map, North Sheet, stations made after January 1, 1967 and before December 31, 1969 (Station Nos. 2689-3407)

List of Abbreviations

(Adapted from Rusnak, G.A. and S.J. Luft, 1963.)

Biological Terms

brachiopod	brach
burrows	burw
cephalopod	ceph
echinoid	echn
foraminifera	F
gastropod	gstr
globigerina	glob
halimeda	hal
mandibles	mand
mollusk	mlsc
organisms	org
pelecypod	plcy
plant	plt
pogonophora	pogono
pteropod	Pt
preserved	prsvd
radiolarian	R
shell (y)	shl (y)
spicules	spcl

Directional Terms

bottom	btm
horizontal	hor
lower	lwr
middle	mid
near	n/
parallel	//
plane	pln
uniform (ly)	unfm (y)
upper	upr
variable	var
vertical (ly)	vert (y)

Mineralogical Terms

calcite	cal
carbon	c
clay	cl
dolomite	dol
dolomitic	dolic
ferruginous	fer
glauconite	glauc
limestone	ls
Limonite	Lim
manganese	Mn
marcasite	mrcs
mineral	min
mineralization	minztn
phosphorite	phos
quartz	qtz
siderite	sid

Color Terms

black	blk
blue	bl
brown	brn
cream	crm
dark	dk
gradational	grdl
gray	gy
green	gn
light	lt
medium	md
mottle,-d	mot
olive	ol
orange	orn
red	rd
stain(ing)	stn(g)
variegated	vrg
yellow	yl

Lithologic Terms

arenaceous	aren
argillaceous	argl
calcareous	calc
carbonaceous	carb
cement(ed)	cmt(d)
clay	cl
detrital	detr
lithology	lith
limestone	ls
micaceous	mic
mudstone	mdstn
oolitic	ool
pisolitic	pis
rock(s)	rk, rx
sand(y)	sd(y)
sandstone	ss
shale	sh
siliceous	sil
silt(y)	slt(y)
tuffaceous	tuf
volcanic	volc

Quantitative Terms

abundant	abu
common	cm
concentration	conc
concentrated	contrd
disseminated	dism
flood	fld
fraction	fxn
large	lrg
light	lt
medium	md
moderate(ly)	mod(y)
prominent	prmt
rare	r/
scarce	scr
scattered	sct
slight(ly)	sl(y)
small	sm
some	s/
strong	strn(y)
trace	tr
uniform	unfm(y)
variable	var
very	v

Miscellaneous Terms

admixed	adm
and	+
apparent	apr
at	@
average	ave
canyon	cnyn, cn
complete(ly)	cpl(y)
diameter	diam
differentiation	diff
distinct	dst
estimate(d)	est
from	fr
highly	hly
irregular	irrg
marked	mrkd
material	mtrl
maximum	max
number	#
open space	O-S
oxidation	oxn
oxidized	ox
percent	%
partial(ly)	prt(y)
poor(ly)	pr(y)
preserved	prsvd
regular	reg
residue	res
sediment	sed
strength	S
(compressive)	
temperature	tem
well	w
with	w/
without	w/o

Textural and Structural Terms

aggregate	agr	streak	stk
angular	ang	stringer	strg
bedding	bdng	structure	str
coarse	crs	swirls	swls
cobble	cob	texture	text
compact(ed)	cpt(d)	thin-bedded	t-b
composite	comp	tight	t/
concretion	cncr	uniform(ly)	unfm(y)
contact	ct	void	v/
cross-bedded	x-bd	zone	z/
crystalline	xln		
crystal	xtl		
dense	ds		
disseminated	dism		
distributed	distrib		
disturbed	dstb		
fine	fn		
frosted	fstd		
fracture	frac		
fragment	frag		
gradational	grdl		
graded	grd		
gradually	grdy		
grain	grn		
granular	grlr		
granule	grnl		
gravel	grv		
hard	hd		
indurated	indur		
irregular	irrg		
lamina(ted)	lam(d)		
layer(ed)	lyr(d)		
loose	l/		
massive	msv		
medium	md		
nodule	nod		
oolite	ool		
pebble	peb		
pellet	pel		
regular	reg		
rock(s)	rk,rx		
round(ed)	rnd(d)		
sharp	shp		
shell(y)	shl(y)		
soft	sft		
sorted, sorting	srt(g)		
stain(ing)	stn(g)		
stratified	stra
