[1] In the paper “Intraseasonal variability near 10°N in the eastern tropical Pacific Ocean” by J. Thomas Farrar and Robert A. Weller (*Journal of Geophysical Research*, *111*, C05015, doi:10.1029/2005JC002989, 2006), the color scales for Figures 14 and 16 are incorrect. In both figures, the contoured data should be a factor of  $4\pi^2$  larger.

Thus, in Figure 16, the color scale should range from 0 to  $0.4343 \text{ mm}^2/\text{degree}^2$  at an interval of 0.0197, and in Figure 14 (which has a logarithmic color scale), the quantity  $\log_{10}(4\pi^2)$  (about 1.5964) should be added to the color scale.
