

The effort involved in continuing to publish a magazine is much greater than publishing the first issue and for this reason I have to thank all the SARTI members and other collaborator groups for their innovative research and technology transfer contributions.

The sixth issue of Instrumentation Viewpoint is a summary of the Marine Technology Workshop communications celebrated in Vilanova i la Geltrú on 15th and 16th of November. The Marine Technology (Martech) Workshop is an initiative from the Tecnoterra Associated Unit (Technical University of Catalonia, Scientific Research Council and Public University of Navarra). The main objective of the Martech Workshop is to exchange information and points of view on the current research in marine technology.

Our goal is to make Instrumentation Viewpoint a window to share experiences with other instrumentation group colleagues. This way the researchers and technicians from Tecnoterra and research groups who have established a collaboration agreement, are involved. They have been invited to submit an extended abstract, two pages papers along with title, abstract, and keywords. We have received and published about hundred collaboration articles from different universities and research centers around the world.

In this issue obviously the number of pages has increased with respect to previous numbers. Usually the publication length is about sixteen pages while in this issue you have hundred and sixteen pages in your hand.

I invite you to participate in the following Instrumentation Viewpoint numbers, and hope that this mean of information and experience exchange that we have initiated allows us to establish new collaboration links.

Best regards from your partner
Antoni Mànuel, PhD
Director of TDC SARTI (UPC)
