

Sensory Objects at The British Museum

Wednesday 11th February in The Enlightenment Gallery 11am - 3pm

Members of the Sensory Objects research project invite you to try out their newly developed interactive Sensory Labels of selected objects in the Enlightenment Gallery at The British Museum.

These Sensory Labels have been co-developed by people with learning difficulties and disabilities from the Tower Project London, working as co-researchers; they form part of an interdisciplinary team from The University of Reading and RIX Research and Media at the University of East London.

The Sensory Objects project creates multisensory interactive artworks that respond to museum collections and generate alternative ideas for museum interpretation.
