

Obama's visit to Hiroshima is viewed as "a sort of" apology by the people of Japan.

This week President Obama will visit the Japanese city of Hiroshima, more than 70 years after the city was destroyed by a US nuclear attack at the end of World War II. While the White House has stated that the President will not apologize for the atomic bombing during his visit – and has also made clear that his visit should not be seen as an apology – it is hard not to link the visit to the idea of an apology. [Atsushi Tago](#) and [Kazunori Inamasu](#) conducted a Japan-wide survey and a survey of Hiroshima residents. They found evidence that while neither the people of Hiroshima nor the Japanese public more generally are looking for an apology from Obama, even without a formal statement of apology, his visit is still seen to be "a sort of apology".

This week President Obama is set to visit the Japanese city of Hiroshima, a city which was destroyed by the US with the first atomic bomb used in anger in August 1945. Though those attacked by the Hiroshima and Nagasaki bombs in the summer of 1945 were victims of the Second World War, the bombs changed the world forever, ushering in a new age under the shadow of nuclear weapons.

What the Japanese people should not forget is the fact that the US' nuclear attacks were ultimately brought on by themselves. Japan's conduct in Asia and its bad policy choices after the Manchurian Incident in 1931 helped to lead to the devastating attacks in the summer of 1945. As US President Harry Truman made it clear in his [radio address](#) three days after the attack, the US had

"used it against those who attacked us without warning at Pearl Harbor, against those who have starved and beaten and executed American prisoners of war, against those who have abandoned all pretense of obeying international laws of warfare."

Furthermore, Truman made it clear that it was done in order to shorten the war and "to save the lives of thousands and thousands of young Americans", calling Hiroshima "a military base." Indeed, a [survey](#) in 2015 by the Pew Research Center found that the majority (56 per cent) of Americans believe that the use of nuclear weapons was justified (by contrast, in Japan, only 14 per cent say it was justified, versus 79 per cent saying that it was not).

However, whether we accept such justifications for bombing the city or not, 140,000 people, mainly civilians, were killed by the weapon. The atomic bomb could have been dropped on the outskirts of the major cities (e.g. in the Bay of Tokyo or a large forest) instead; the Emperor and his cabinet ministers might then have surrendered after recognizing the devastating power of the weapon. The Japanese government and the former Imperial Army and Navy could never (and should never) claim to be victims of the war, but surely, the people of Hiroshima and Nagasaki could emphasize the devastating damage of the bomb that changed the world. In this light, they may have a right to ask the US to admit it was not the right decision (especially the choice to attack the city's center with its large civilian population) and apologize for that.

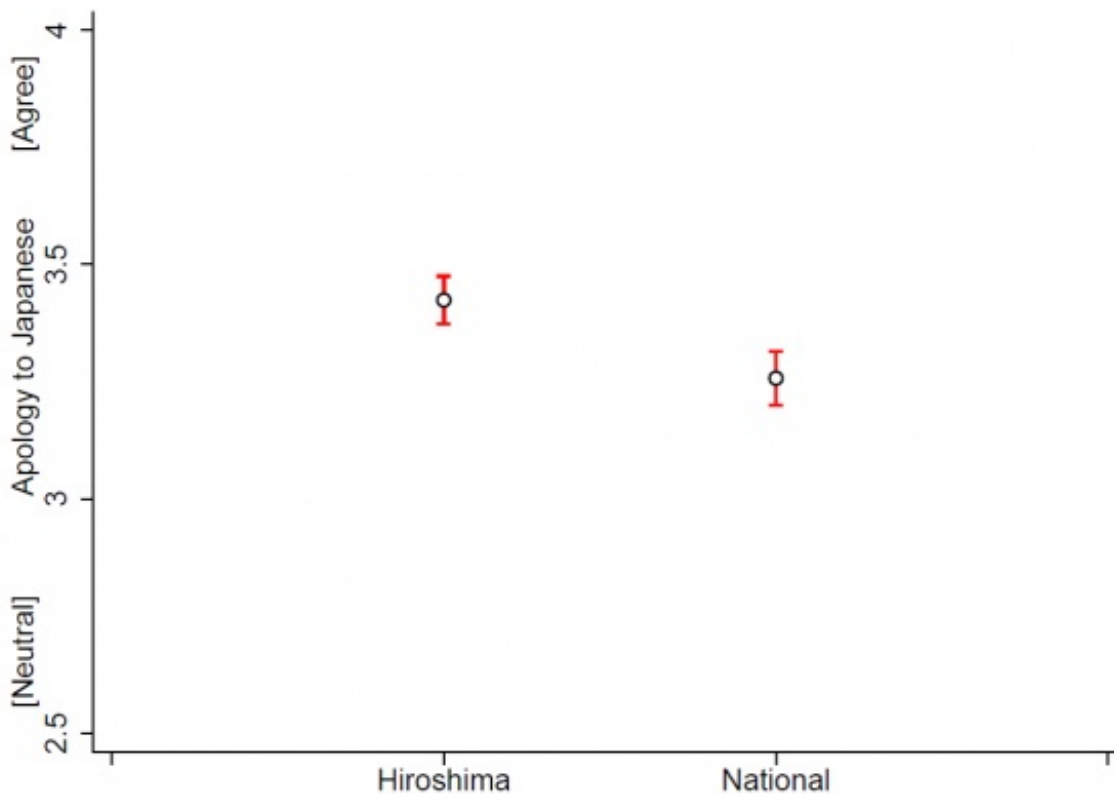

"President Obama's Hiroshima visit without an apology" is thus a controversial issue to the US and Japanese public. While the White House categorically [denies](#) that President Obama intends to apologize, and has tried to frame the visit as something different from an apology, the media and general public do see the visit as [linked](#) to the idea of an apology. How should the US government face its undeniable and undesirable past?

To study this, we performed a series of surveys on a nation-wide Japanese sample of about 1,000 people, and on a similar number of people currently living in Hiroshima. We asked if they support the visit itself, if they see sincerity in the visit, and if they see the visit as a sort of apology (even though the White House denies it).

Our data reveals important findings throughout the nation-wide and Hiroshima focus samples. First of all, the visit is widely welcomed by both national and Hiroshima respondents. For the national sample 89.7 percent of respondents, supported Obama's visit, and for Hiroshima, 94.1 percent. Also, the Japanese see sincerity in the visit; 73.1 percent of the national respondents answered yes to our sincerity question and 75.1 percent of the Hiroshima sample did the same. Generally speaking, people in Hiroshima see the visit more favorably and welcome it.

On the question which asks whether they consider the visit to be "a sort of apology," their answer is "Yes". We believe this is the most important finding of the survey: that the visit is considered as a "non-apology apology" in both Hiroshima and national samples even though the White House states that President Obama will not revisit the decision to use the atomic bomb and there is no intention to make an apology. For the national sample, 77.3 per cent see Obama's visit as a sort of apology, and for Hiroshima, the number is 85.6 percent. As Figure 1 shows, the national and Hiroshima samples are statistically different – more people in Hiroshima see it as an implicit apology than the national average.

Figure 1 – Mean Score for Question “Do you agree or disagree to think that the visit is a sort of apology to Japanese?”

Note: Respondents are asked to select from 1 [disagree] to 4 [agree] with an option to choose [Do not know]. There are 93 and 78 people who selected [Do not know] answer in the national and Hiroshima samples, respectively. Red bar shows 95% C.I.

The overwhelming majority in Japan and especially in Hiroshima think of President Obama's visit as an implicit apology. His decision for coming to Hiroshima is widely supported by Japanese, and it will be regarded as a proof of

the matured, deep-rooted friendship of the two countries, which has overcome the tragic and controversial memory of the war. We believe that [American public diplomacy](#) has been successful for this particular visit.

Finally, Figure 2 shows that the Japanese are not asking the US to apologize for the use of the nuclear weapons. While the national sample is a bit higher than the neutral 2.5 score, neither the people in Hiroshima nor the Japanese public in general are eager for the US to give them a formal statement of apology. We believe this is clear evidence that the two nations truly enjoy forward-looking bilateral relations, rather than wanting to hold on to the past. And importantly, such a tendency is stronger in Hiroshima than the national average.

Figure 2 – Mean Score for Question “Do you agree or disagree to think that the USA should make an apology for the fact that it dropped the nuclear bombs to Japan?”

Note: Respondents are asked to select from 1 [disagree] to 4 [agree] with an option to choose [Do not know]. There are 225 and 215 people who selected [Do not know] answer in the national and Hiroshima samples, respectively. Red bar shows 95% C.I.

This survey was conducted by [Collaborative Research On Political Information Transmission \(CROP-IT\)](#) with funding support from the Japan Society for the Promotion of Science (JSPS) from May 20 to 24, 2016. Shoko Kohama (Hokkaido University) is also a member of this survey study.
