

GEMAS: Colours of dry and moist agricultural soil samples of Europe

Martin Klug (1), Karl Fabian (1,2), Clemens Reimann (1), and the GEMAS project Team (3)

(1) Geological Survey of Norway, Trondheim, Norway (martin.klug@ngu.no),

(2) CAGE - Centre for Arctic Gas Hydrate, Environment and Climate; Department of Geology, University of Tromsø, 9037 Tromsø, Norway

(3) Albanese S, Andersson M, Arnoldussen A, Baritz R, Batista MJ, Bel-Ian A, Cicchella D, Demetriades A, De Vivo B, De Vos W, Duriš M, Dusza-Dobek A, Eggen OA, Eklund M, Ernstsens V, Finne, TE, Flight DM, Forrester S, Fuchs M, Fügeđi U, Gilucis A, Gosar M, Gregorauskiene V, Gulan A, Halamić J, Haslinger E, Hayoz P, Hobiger G, Hoffmann R, Hoogewerff J, Hrvatovic H, Husnjak S, Janik L, Johnson CC, Jordan G, Kirby J, Kivisilla J, Klos V, Krone F, Kwećko P, Kuti L, Ladenberger A, Lima A, Locutura J, Lucivjansky P, Mackovych D, Malyuk BI, Maquil R, McLaughlin M, Meuli RG, Moistic, N, Mol G, Négrel P, O'Connor P, Oorts K, Ottesen RT, Pasieczna A, Petersell W, Pfeiderer S, Pořnavić M, Prazeres C, Rauch U, Salpeteur I, Schedl A, Scheib AJ, Schoeters I, Sefcik P, Sellersjö E, Skopljak F, Slaninka I, Šorša A, Srvkota R, Stafilov T, Tarvainen T, Trendavilov V, Valera P, Verougstraete V, Vidojević D, Zissimos AM, Zomeni Z.

High resolution HDR colour images of all Ap samples from the GEMAS survey were acquired using a GeoTek Linescan camera. This data set will help to develop new methods for world-wide characterization and monitoring of agricultural soils which is essential for quantifying geologic and human impact on the critical zone environment.
