COMMERCIAL FERTILIZERS IN 1918-1919.

G. S. FRAPS, PH. D., CHIEF, DIVISION OF CHEMISTRY; STATE CHEMIST.

This bulletin deals with the State control of commercial fertilizers. Information concerning the nature and use of fertilizers is to be found in Bulletin 167, copies of which will be sent free on application.

The quantities of commercial fertilizers sold in Texas for several seasons are as follows:

1905-06.....	13,500 tons.
1910-11.....	52,985 tons.
1911-12.....	46,000 tons.
1912-13.....	75,500 tons.
1913-14.....	77,400 tons.
1914-15.....	17,500 tons.
1915-16.....	21,500 tons.
1916-17.....	42,000 tons.
1917-18.....	58,000 tons.
1918-19.....	46,000 tons.

FERTILIZER LAW.

The present fertilizer law went into effect September 1, 1911. Copies of the law, and information as to how to comply with it will be sent on application.

INFORMATION ON THE BAG.

The manufacturer must print the guaranteed analysis of the fertilizer either on the bag or on a tag attached to the bag. The information required to be printed on the bag, or tag, is as follows:

Net weight.

Name of fertilizer in full.

Name and address of manufacturer.

Guaranteed analysis:

Available phosphoric acid, per cent.

Nitrogen, per cent.

Potash, per cent.

Total phosphoric acid may be guaranteed in place of available in bone or tankage.

FREE ANALYSIS.

Fertilizer samples, if taken in accordance with the requirements of the law, will be analyzed free of charge. Those who desire a free analysis of a fertilizer should write for a blank "Application for Free Fertilizer Analysis" to the State Chemist, College Station, Texas. Samples not taken as required by the law cannot be accepted for analysis.

INVESTIGATIONS UNDER THE FERTILIZER LAW.

The State Chemist is required by the fertilizer law to "investigate the composition, properties, and agricultural values of fertilizers, or of fertilizer materials, or ingredients of fertilizers, sold or offered for sale within the State of Texas, and shall publish his results as he may find." The results of such investigations will be published from time to time as the experiments are completed.

RELATION TO STATION WORK.

The work of the State Chemist is closely related to the chemical work of the Experiment Station. In his capacity as Chemist to the Experiment Station, the State Chemist is carrying out extensive investigations into the fundamental properties of soils, especially with respect to their content of plant food. This work is related closely to the use of the fertilizers, and is connected with the investigations as to the agricultural values of fertilizers required by the fertilizer control, for fertilizers vary in effect upon the different soils.

POTASH IN FERTILIZERS.

Texas soils are, as a general rule, well supplied with potash and are much more likely to be deficient in phosphoric acid or in nitrogen than they are to be deficient in potash. This fact is clearly established by numerous analyses of soils and by pot experiments made at the Texas Experiment Station, as well as by co-operative field experiments.

A number of co-operative fertilizer experiments have been conducted by the chemical division of the Experiment Station, and it has been found that phosphoric acid and nitrogen are much more likely to give results than potash. In sixty-eight out of 114 experiments described in Bulletin 184, potash had no effect. The chances are, therefore, against the potash having any effect if generally used in complete fertilizers on Texas soils. Other co-operative fertilizer experiments are reported in Bulletin 235.

The quantity of potash in ordinary corn and cotton fertilizer is so small that it is very doubtful if the quantity is sufficient to be of advantage even where potash is needed. It would be better to increase the quantity of phosphoric acid or nitrogen, and leave out the potash. Of course there are soils and crops on which potash is of advantage. Light sandy soils may be deficient in potash, but it is a question if corn or cotton should be grown at all on such soils, as often the yield is not sufficient to pay. Tobacco, cabbages, potatoes, onions, and certain other truck crops, grown on light sandy soils, may give favorable returns for potash. On heavier soils they may, or may not give returns for the potash. A great deal depends upon the possible yield, as the greater the possible yield permitted by soil and climatic conditions (including soil moisture) the greater the possibility of returns for potash.

From these considerations it is evident that Texas farmers can well afford to eliminate potash from general fertilizers, especially for cotton.

and corn. Potash should be used only in exceptional cases, where soil conditions and special crops promise returns on the investment. The haphazard use of potash in fertilizer under all conditions should be discontinued. In the majority of cases, potash is not needed, being supplied by the soil in sufficient quantity, and no returns are secured on the investment. Potash should be used only when it is known to be needed for the soil, and for the crops to be grown on it. If potash is not known to be needed, then the chances are there will be no return on the money expended for it. Texas soils can get on much better without fertilizer potash than without phosphoric acid or nitrogen. There has been in the past much waste of potash.

There is no doubt that the advertisements of potash have given many people an exaggerated idea of the importance of potash.

HOME MIXING.

It is often possible for consumers of fertilizers to save money by purchasing acid phosphate, cottonseed meal, or other fertilizer ingredients, and make their own mixtures. Information concerning this topic is given in bulletins of the Texas Experiment Station, free on application (see especially Bulletin 167).

BULK SALES.

Fertilizer may be sold in bulk by manufacturers direct to consumers for their own use; the tax must, in such case, be paid by the manufacturer. Fertilizer purchased in bulk and then sold or distributed, must be bagged, and must have a tax tag attached to each sack, also a tag showing the guaranteed analysis of the fertilizer. Considerable saving, both in freight and purchase price, may be made by purchasing fertilizer in bulk. For further instructions as to the law concerning bulk sales, address the State Chemist at College Station.

LOW GRADE FERTILIZERS.

Purchasers are advised not to buy low grade fertilizers. The words "low grade" appear on the sack. The plant food in such fertilizers usually costs much more per pound than in standard grade or high grade goods, although the price per ton or sack may be a little lower.

Freight, cost of handling and other expenses, are high in proportion to the plant food present.

COTTONSEED PRODUCTS.

Cottonseed meal sold for fertilizer purposes comes under the fertilizer law. A cottonseed product containing less than 6.88 per cent. nitrogen may not be sold as cottonseed meal, but must be termed cottonseed fertilizer, cottonseed meal and hulls, or given some other name to indicate that it is below the requirement for cottonseed meal. It is an economic error to use cottonseed hulls as a fertilizer. Their feed value is greater than their fertilizer value. Better returns may also be secured with cottonseed meal by feeding it to animals on the land to be fertilized.

ANALYSIS BELOW GUARANTEE.

Whenever any lot of fertilizer is four per cent. or more below guarantee, all persons who have sold this lot of fertilizer must make good the deficiency to all purchasers. The rebate is paid by the manufacturer to the dealer and by the dealer to the consumer.

A number of rebates have been paid under this provision of the law.

LIMESTONE FILLER.

Some manufacturers of acid phosphate make a high grade phosphate and reduce it to 16 or 14 per cent. grade by means of limestone or carbonate of lime. The use of limestone dries out the fertilizer and permits it to be drilled very easily, but the use of more than small amounts is likely to cause reversion of the acid phosphate and throw it below the guaranteed analysis. The reversion does not occur all at once, so that an early analysis may show the goods up to guarantee and a later analysis show them below guarantee. This matter is discussed in Bulletin 223.

In the fertilizer bulletin for 1915-16 are printed two analyses of acid phosphate guaranteed at sixteen per cent., but found to contain thirteen per cent. available phosphoric acid associated with over five per cent. insoluble and eighteen per cent. total phosphoric acid. Examination showed the samples to contain carbonate of lime. The deficiency was clearly due to the reversion of the acid phosphate due to the use of a quantity of limestone as a filler. A number of analyses of complete fertilizers are printed in this Bulletin, which are below guarantee probably on account of the presence of limestone.

ARTIFICIAL COLORING.

A concern in Georgia is offering yellow clay for sale to fertilizer manufacturers for the purpose of making fertilizers appear to contain cottonseed meal. In a letter they say, "We understand that as a partial substitute for cottonseed, which is just now a very costly article, our oxide gives about the same shade to certain fertilizers that cottonseed (meal) gives."

Any fertilizer containing this substance is adulterated under the Texas law. Its use is clearly for the purpose of deceiving the purchaser. Fertilizer containing it is liable to seizure and the manufacturer of such fertilizer is liable to a fine.

PRICES OF FERTILIZERS.

The United States Department of Agriculture announces that farmers of the Southern States should obtain their mixed fertilizers for the fall season of 1919 at an average price about 30 per cent. lower than for the spring season this year.

This announcement for the Southern States follows a similar one made on June 7 for the Northern States. It follows conferences with individual manufacturers which placed the Department in a position to state

that the basic price of mixed fertilizers, f. o. b. the South Atlantic and Gulf ports of Baltimore, Norfolk, Wilmington, Charleston, Savannah, Jacksonville, Pensacola and Mobile will be the same as f. o. b. prices at Baltimore, Philadelphia and Carteret, which established the prices for the Northern States. The accompanying table gives the maximum f. o. b. prices at which mixed fertilizers can be obtained for the South Atlantic and Gulf ports mentioned.

These prices are based upon delivery in 200-pound bags. If in 167-pound bags, 25 cents per rton will be added; if in 125-pound bags, 50 cents per ton; and if in 100-pound bags, 75 cents per ton. The prices are to wholesale dealers and to farmers ordering 30 tons or more.

In general, flat delivered prices prevail in Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana east of the Mississippi River, and Florida west of the Apalachicola River, for which a flat rate of \$2.50 per ton will be added to the port prices. For flat delivered prices in Louisiana west of the Mississippi River, Arkansas, Texas, Oklahoma, and Tennessee, \$3.75 per ton will be added to the port prices.

In most cases a discount of 50 cents per ton or a f. o. b. factory price of \$2 per ton is allowed at interior factory points where delivery is made at the warehouse.

Where deliveries are made in less than carload lots the difference in freight is also to be added. In cases where farmers buy in less than 30-ton lots and buy through dealers the dealer's price for handling the goods (usually \$2 per ton) is to be added.

The prices include a 5 per cent. discount if paid in cash on December 1, and usually an additional $\frac{1}{2}$ per cent. is granted for each full month when cash settlement is made before that date.

The plant food in this table is valued at approximately 8.6 cents a pound for phosphoric acid, 30 cents for nitrogen, and 15 cents for potash.

Table 1—Maximum F. O. B. prices at which principal grades of mixed fertilizer may be obtained in 30-ton lots at the South Atlantic and Gulf Coast Ports, fall of 1919.

EXPLANATION OF TERMS.

Available phosphoric acid is the phosphoric acid which can be taken up immediately by plants. Phosphoric acid promotes the fruiting of plants though it is necessary for the development of all parts of the plant.

Total phosphoric acid is the entire quantity of the phosphoric acid present, whether available or not. A guarantee of "total phosphoric acid" in place of "available" is made in bone, tankage, rock phosphate and Thomas phosphate.

Nitrogen refers to the total nitrogen in the fertilizer. It is necessary for the development of all parts of the plant, but an excess of nitrogen delays maturity and is liable to promote the growth of stalk and leaves at expense of fruit. Nitrogen is needed by many Texas soils.

Potash is required to be soluble in water. A great many Texas soils contain a sufficient quantity of potash, so that its use in fertilizers on such soils is a useless expense. Potash, like nitrogen, is needed by all parts of the plants, but especially by stalk and leaves. An excess of potash delays maturity and is liable to promote growth of the stalk and leaves at the expense of fruit.

Valuation per ton represents the cost of the plant food in the unmixed raw material, at retail, in large markets. It is not the price at which the fertilizer is sold. The selling price includes also cost of mixing, sacks, transportation, and manufacturers' and dealers' profits. On account of the variations in prices which have occurred since the war broke out, valuations given in this bulletin do not represent closely the cost of the plant food.

FERTILIZER VALUATIONS, 1918-1919.

Cents per pound.

Available Phosphoric Acid.....	7½
Total Phosphoric Acid in Tankage and Bone.....	5
Nitrogen	35
Potash	25

The valuations are not closely related to the prices of the fertilizer, on account of the decided variations and changes due to the war. The

relation between the valuation and the retail selling price by merchants is given in table 2.

The valuations are decided on about September 1, and the prices may change before the active fertilizer season, from February to April.

Table 2—Relation of valuation and selling price, 1918-1919.

	Number averaged	Average valuation	Average selling price
Acid Phosphate 14 per cent.....	4	\$21.00	\$30.25
Acid Phosphate 16 per cent.....	115	24.00	29.72
Standard Grade Phosphate and Nitrogen.....	164	26.86	44.11
High Grade Phosphate and Nitrogen.....	55	31.96	48.78
Standard Grade Complete Fertilizer.....	37	32.32	51.91
High Grade Complete Fertilizer.....	17	40.50	61.56

GUARANTEED AND DELIVERED FERTILIZER.

Table 3 contains the averaged guaranteed valuation, and the average valuation found by our analyses, for all manufacturers doing business in Texas. In preparing the table, all analyses made are averaged, even though several were made of each brand.

Table 3—Guaranteed and delivered fertilizer.

ANALYSIS OF FERTILIZERS, 1918-1919.

Table 4 contains a list of all samples of fertilizer subjected to analysis in the season beginning September 1, 1918, to date. The table gives the name and address of the manufacturer, the name of the brand, the guaranteed analysis, and the analysis. Analyses below guarantee are

brought out in heavy type. Practically all the samples were collected by our inspectors. Analyses and inspection were made by S. E. Asbury, S. Lomanitz, H. B. Smith, and Dona Newland.

REGISTRATION, 1918-1919.

A list of brands registered for sale in the season of 1918-1919 is given in table 5. Many of the brands so registered were sold only in lots of a few sacks, or were not sold at all in the State.

COMMERCIAL FERTILIZERS, 1918-1919.

11

Table 2—Registration of commercial fertilizers, season 1918-1919.

Manufacturer, Place of Business and Brand.	Phosphoric Acid—Available Per Cent.	Nitrogen—Per Cent.	Potash—Per Cent.	Valuation—Per Ton.
Swift & Co., Fort Worth, Texas; Harvey and Shreveport, La.—Continued.				
Swift's Ammoniated Raw Bone Superphosphate.....	9.50	1.65	1.50	\$33.30
Swift's Blood and Bone.....	12.00	1.65	29.55
Swift's Blood and Bone Special.....	10.00	2.47	32.29
Swift's Blood and Bone Truckee.....	8.00	2.47	29.29
Swift's Bone Meal Fertilizer.....	*24.00	2.47	41.29
Swift's Champion Vegetable Grower.....	8.00	3.29	3.00	50.03
Swift's Cotton Seed Meal and Hulls No. 5.....	6.17	43.19
Swift's Diamond "A" Fertilizer.....	8.00	1.65	3.00	38.55
Swift's Diamond "C" Fertilizer.....	8.00	2.47	2.00	39.29
Swift's Diamond "G" Onion Grower.....	6.00	2.47	2.00	36.29
Swift's Diamond "S" Compound.....	10.00	2.47	32.29
Swift's Eagle Guano.....	10.00	1.65	2.00	36.55
Swift's Early Vegetable and Fruit Fertilizer.....	10.00	3.29	38.03
Swift's East Texas Truckee.....	8.00	2.47	3.00	44.29
Swift's Excelsior Crop Producer.....	10.00	1.65	26.55
Swift's Favorite Crop Producer.....	12.00	1.65	29.55
Swift's Garden City Phosphate 14 Per Cent.....	14.00	21.00
Swift's General Crop Producer.....	11.00	1.65	28.05
Swift's Good Luck Compound.....	10.00	1.65	2.00	36.55
Swift's Golden Harvest Compound.....	9.00	1.65	2.00	35.05
Swift's Ground Beef Bone Fertilizer.....	*27.00	2.06	41.42
Swift's High Grade Acid Phosphate 16 Per Cent.....	16.00	24.00
Swift's High Grade Mixture.....	4.00	7.40	57.80
Swift's High Grade Onion Fertilizer.....	7.00	4.94	2.00	55.08
Swift's Laredo Mixture.....	8.00	3.29	35.03
Swift's Laredo Special.....	3.00	4.94	3.00	54.08
Swift's Nitrate of Soda.....	14.81	103.67
Swift's Non-Potassic Cotton and Corn Grower.....	11.00	1.65	28.05
Swift's Non-Potassic Raw Bone Special.....	11.00	1.65	28.05
Swift's Onion Grower.....	7.00	3.70	3.00	51.40
Swift's Onion Growers' Special.....	7.00	4.94	45.08
Swift's Planters' Special.....	10.00	1.65	1.00	31.55
Swift's Plow Boy Compound.....	8.00	2.47	3.00	44.29
Swift's Raw Bone Meal Fertilizer.....	*22.00	3.70	47.90
Swift's Red Steer Guano.....	9.00	1.65	2.00	35.05
Swift's Special Acid Phosphate 18 Per Cent.....	18.00	27.00
Swift's Special Cotton and Corn Grower.....	10.00	1.65	1.00	31.55
Swift's Special Mixture.....	10.00	1.65	26.55
Swift's Special Onion Grower.....	6.00	3.29	32.03
Swift's Special Onion Mixture.....	4.00	4.94	40.58
Swift's Special Phosphate and Potash.....	10.00	2.00	25.00
Swift's Special Tankage Fertilizer.....	4.80	5.27	44.09
Swift's Superphosphate Compound.....	9.50	1.65	1.50	33.30
Swift's Superphosphate Potash Ammoniated.....	8.00	1.65	2.00	33.55
Swift's Tankage Formula.....	*6.87	7.40	58.67
Swift's Tankage Mixture.....	9.00	3.29	36.53
Swift's Tomato Special.....	10.00	2.47	1.00	37.29
Swift's Truckers' Favorite.....	8.00	2.47	1.00	34.29
Swift's Truckers' Favorite Compound.....	8.00	2.47	1.00	34.29
Tennessee Coal, Iron and Railroad Co., Birmingham, Ala.—				
Duplex Basic Phosphate.....	*18.00	27.00
14 Per Cent Duplex Basic Phosphate.....	*14.00	21.00
Union Seed and Fertilizer Co., New Orleans, La.—				
Ammoniated Raw Bone Superphosphate and Potash.....	10.00	1.65	1.00	31.55
Ammoniated Raw Bone Superphosphate.....	11.00	1.65	28.05
Black Diamond Acid Phosphate.....	12.00	18.00
Blood and Bone.....	11.00	1.65	28.05
Blood, Bone and Beef.....	10.00	1.65	1.00	31.55
Blood, Bone and Beef (Without Potash).....	11.00	1.65	28.05
Blood, Bone and Potash.....	10.00	1.65	1.00	31.55
Blue Rose Rice Grower.....	12.00	2.00	28.00
Bull Dog Acid Phosphate.....	16.00	24.00
Crescent City Acid Phosphate.....	12.00	18.00
Cynamid 15 Per Cent.....	15.00	105.00
Dissolved Bone and Potash 10-4.....	10.00	4.00	35.00
Economizer.....	10.00	1.65	2.00	36.55

*Total Phosphoric Acid.

Table 2—Registration of commercial fertilizers, season 1918-1919.

Manufacturer, Place of Business and Brand.	Phosphoric Acid—Available Per Cent.	Nitrogen—Per Cent.	Potash—Per Cent.	Valuation—Per Ton.	
Union Seed and Fertilizer Co., New Orleans, La.—Continued.					
Economizer (Without Potash)	12.00	1.65	2.00	\$29.55	
Excelsior	10.00	1.65	36.55		
Excelsior (Without Potash)	12.00	1.65	29.55		
Golden Guano	10.00	1.65	1.00	31.55	
Golden Guano (Without Potash)	11.00	1.65	28.05		
Goldsmith's Improved Mixture	10.00	1.65	1.00	31.55	
Goldsmith's Improved Mixture (Without Potash)	11.00	1.65	28.05		
Honduras Rice Grower	12.00	1.65	4.00	38.00	
Lone Star Blood Mixture	10.00	0.82	1.00	25.74	
Lone Star Meal Mixture	10.00	0.82	1.00	25.74	
Louisiana Plant Cane Grower	6.00	3.30	32.10
