- Analyses of
- Commercial Fertilizers
- Sold during 1955-56

October 1956

D I G E S T

This is the 54th annual report of the operation of the Texas fertilizer law, and covers the period from September 1, 1955 through August 31, 1956.

Fertilizers and fertilizer materials sold during the fertilizer year beginning July 1, 1955 amounted to 566,399 tons, which was a 4 percent decrease over the tonnage sold during the preceding year. Grades of the 1-2-1 ratio accounted for 67 percent and the 1-1-1 ratio for 11 percent of the total of 281,797 tons of mixed goods sold. Nitrogenous materials accounted for 44 percent, superphosphates for 27 percent and ammoniated phosphates for 24 percent of the total of 284,602 tons of materials sold.

Analyses are given of 1,790 official samples of fertilizers. Valuations found on analyses are compared with the analyses guaranteed by the registrants. Rebates totaling \$1,585.26 were paid on 51 lots of fertilizer for which the valuation found was 4 percent or more below the valuation guaranteed.

Analyses of Commercial Fertilizers Sold during 1955-56

J. F. FUDGE, State Chemist

THIS IS THE 54TH ANNUAL FERTILIZER BULLETIN published in compliance with the Texas fertilizer law, which requires that the State Chemist shall issue at least one bulletin annually setting forth the analyses of fertilizers made under the provisions of the fertilizer law, the operations of the law and other information pertaining to the sale of fertilizer in Texas.

SOME REQUIREMENTS OF THE LAW

The law governing the sale of commercial fertilizers in Texas is found in Chapter Twelve of Title Nineteen of Vernon's Revised Criminal Statutes, 1925, and in Chapter Five of Title Four of Vernon's Texas Civil Statutes, 1925. A summary of some important requirements of the law follows. For further requirements, penalties, definitions and other detailed information, reference should be made to the full text of the law, which will be furnished by the State Chemist on request.

Materials Covered by the Law

All mixed fertilizers, fertilizer materials and all other substances which have or are claimed to have a beneficial effect on the soil or to promote the growth of crops, come under the law, with the exception of lime, limestone, marl, agricultural gypsum, unground bones, stockpen manure, barnyard manure and the excrement of any domestic animal in case that said manure or excrement has not been dried or manipulated or otherwise treated, or is not claimed to have a value of more than \$4 a ton.

Registration

Before a fertilizer is offered for sale in Texas, it must be registered with the State Chemist of Texas, College Station, Texas. All registrations expire on August 31 of each year, and new applications for registration must be submitted for each year. Application blanks for registration are furnished by the State Chemist, on request. The application blank must be filled out and sent to the State Chemist together with a copy of the printed bag or tag to be used. Such a bag or tag must meet the requirements of the fertilizer law. Wording on the application for registration must agree exactly with the wording on the printed bag or tag, and no change can be made in the wording on the bag or tag after it has been registered. Such change requires a new registration.

The application for registration must state all the materials used in the fertilizer, including

the filler or conditioner, and these materials must be used in all batches. A change may be made only if the change meets the requirements of the law and the State Chemist is notified.

No brand name identical with or so similar to a brand name previously registered by another manufacturer as to lead to confusion can be accepted. No name which is misleading as to the ingredients of the fertilizer can be accepted. The grade of mixed fertilizers should be part of the brand name; for example, *Jupiter Brand 20 Percent Superphosphate* or *Mars Brand 5-10-5 Fertilizer*.

Labels

The law requires the following information to be printed on the bag or on a tag attached to the bag:

- Net weight of contents of the bag.
- Name of fertilizer in full.
- Name and address of manufacturer, manipulator or guarantor.
- Guaranteed analysis (in order given below):
 - Nitrogen, percent
 - Available phosphoric acid, percent.
 - Potash, percent.

Nitrogen refers to the total nitrogen (N) present.

Available phosphoric acid (P_2O_5) must be guaranteed in all mixed fertilizers and in all fertilizer materials, with the following exceptions. Total phosphoric acid may be guaranteed in bone meal, tankage or other similar products, but where this is done, no guarantee of available phosphoric acid can be used. If it is desired to claim available phosphoric acid only, the guarantee must take the form set forth above.

Potash (K_2O) refers to potash soluble in distilled water. No other guarantee or term can be used.

Inspection Fees

To finance the inspection of fertilizers and the collection and analysis of official samples of fertilizer, experiments relative to the value of fertilizers, and for certain other purposes, the law imposes an inspection fee of 25 cents per ton on all fertilizers sold or offered for sale in Texas. This fertilizer inspection fee must be paid on the basis of and accompany sworn quarterly statements of sales, due in the office of the State Chemist on the first day of September, December, March and June. A collection fee equal to 10

percent of the amount due is charged against all reports more than 20 days in arrears.

Bulk Sales

Fertilizer in bulk for manufacturing proposes can be shipped only to the factory of a manufacturer who has registered fertilizer for sale in Texas.

Fertilizer in bulk cannot be sold to dealers for resale or distribution.

Registered fertilizers may be sold in bulk by manufacturers to persons, individuals or firms for their own use on their own lands, but not for resale or distribution, under rules prescribed by the State Chemist. The inspection fee must be paid on all such sales. All authorizations to sell fertilizer in bulk expire August 31 of each year.

Report of Sales

The guarantor must mail a report of each sale or shipment of fertilizer within or into Texas to the State Chemist within 3 days after such sale or shipment. The report must be made by sending to the State Chemist a copy of the invoice used in billing the customer. The invoices must be numbered, and the same number cannot be used twice during the same year. Reports of sales in bulk to manufacturers must be marked "for manufacturing purposes." Reports of sales in bulk to individuals for use on their own land must be marked "bulk sale to consumer."

GRADES APPROVED FOR 1956-57

The grade of a mixed fertilizer is stated in numbers representing the guaranteed analysis as percentages of nitrogen, available phosphoric acid and water-soluble potash. For example, a grade of 5-10-5 means that the fertilizer is guaranteed by the manufacturer to contain 5 percent nitrogen, 10 percent available phosphoric acid and 5 percent water-soluble potash. The term grade also may refer to the percentage of a primary component in a fertilizer material, as in 20 percent superphosphate. Wherever practicable, the grade of a fertilizer or fertilizer material should be included as part of the full name of the fertilizer required on the bag or tag.

Fertilizers also may be described by a numerical statement expressing the relation among the primary components in its simplest form, called a ratio. For example, a 5-10-5 fertilizer contains 1 part of nitrogen to 2 parts of available phosphoric acid and to 1 part of potash. Consequently, this fertilizer has a 1-2-1 ratio; other grades having this ratio include 6-12-6, 10-20-10 and 12-24-12.

The grades of mixed farm fertilizers sold in Texas have been limited in number for nearly 30 years. Limitation and standardization of grades reduce the cost of manufacturing and handling, thereby permitting the fertilizer to be sold to the consumer at a lower cost. They also assist the

farmer to become familiar with the different grades of fertilizer, enable him to decide more readily on the proper grade to be used and enable agricultural specialists to make definite recommendations. The ratios and minimum grades of mixed farm fertilizers to be approxed in Texas during a given year are decided by the Texas Fertilizer Committee after a public hearing at which manufacturers and others interested may present recommendations. This public hearing is held annually in cooperation with fertilizer control officials, agricultural specialists and manufacturers of Texas, Louisiana, Arkansas, Oklahoma and New Mexico. The list of approved grades is published in the annual fertilizer bulletin and may also be obtained on request to the State Chemist.

Following the annual public hearing on grades held at Galveston July 20, 1956, the Texas Fertilizer Committee approved the following ratios and minimum grades for use in Texas during the year beginning September 1, 1956:

Ratio approved	Minimum grade	Ratio approved	Minimum grade
0-1-1	0-14-14	1-2-3	4-8-12
0-2-1	0-16-8	1-3-1	4-12-4
1-1-0	10-10-0	1-4-4	3-12-12
1-1-1	8-8-8	2-1-0	14-7-0
1-2-0	7-14-0	2-1-1	10-5-5
1-2-1	5-10-5	2-2-1	10-10-5
1-2-2	5-10-10		

Grades of mixed goods of the same ratios as those above, but of higher guaranteed analysis also were approved. For example, a 12-24-12 is approved as a higher analysis of the 1-2-1 ratio.

All fertilizer materials were approved. A few products containing both nitrogen and available phosphoric acid, such as 4-16-0 (ammoniated superphosphate), 16-20-0, 11-48-0 and 13-39-0 (ammonium phosphates) also were approved as materials.

TEXAS FERTILIZER COMMITTEE

The Texas Fertilizer Committee, composed of agricultural subject-matter specialists of the Texas Agricultural and Mechanical College System and representatives of the U. S. Department of Agriculture, is appointed by the Director of the Texas Agricultural Experiment Station to advise and assist the State Chemist in the discharge of certain of his duties, particularly with respect to ratios and grades of mixed fertilizer to be approved for registration during the coming year. In the period covered by this report, the committee was composed of the following:

- J. F. Fudge, State Chemist, Chairman
- J. E. Adams, Dean, School of Agriculture
- J. B. Page, Head, Department of Agronomy
- G. W. Adriance, Head, Department of Horticulture

F. R. Brison, Professor of Horticulture
 J. E. Hutchison, Extension State Agricultural Leader
 O. J. Moss, Agricultural Conservation and Stabilization, U. S. Department of Agriculture
 Donald R. Paterson, Associate Horticulturist
 Ben R. Spears, Extension Agronomist
 M. K. Thornton, Extension Agricultural Chemist

BRANDS AND TRADE-MARKS

The law requires the State Chemist to publish annually a list of brands or trade-marks registered with him. The following is a list of brands and trade-marks registered with the State Chemist during 1955-56;

AA Quality	Co-Op	Gro-Tex
AC I-42	Cross Country	Gulf
Acid-Gro	Davco Bulldog	Heart
Aero	Davey	Heart of Texas
Aero-Phos	De-Pester	Heller-Gro
Ag Amm	Dixie	Hereford
Agco	Dixsol	Hills
Agri-Chem	Double Circle	Hi-Yield
Agri-Sul	Doubleton	Hi-Vita
Alamo	Dow	Hoffman's
All-Weather	Driconure	Hoseco
Ammo-Phos	Dri-Flo	Hy-Gro
Anaconda	Dupont	Hyponex
Anchor	Easy Going	Imperial Indian
Aquadry	Ebony	International
Arcadian	Es Min-El	Interstate
Arkansas	Fertichem	Ivy
Farmers	Fertigro	K-W
Quality	Fertilaid	La-Tex
Ark-Mo	Fertilene	Lawn Green
Armour Pebble	Fertil-Gro	Lawnscap
Armour Big Crop	Ferti-Lome	Loma
Arrow	Fidelity	Leeloam

INSPECTION FEES COLLECTED

Fertilizer inspection fees equivalent to 570,691 tons of fertilizer were collected for fertilizer sold during the Texas fiscal year from September 1, 1955 through August 31, 1956. This tonnage is compared in Table 1 with tonnages on which fees were collected in previous periods.

All fees collected are used for the administration of the Texas fertilizer law and for research on various factors which influence the agricultural value of commercial fertilizers.

TABLE 1. FERTILIZER INSPECTION FEES COLLECTED, CALCULATED ON A TONNAGE BASIS, DURING DIFFERENT PERIODS (SEPTEMBER 1 OF ONE YEAR THROUGH AUGUST 31 OF THE NEXT YEAR)

Year	Tonnage equivalent
1905-06	13,500
1910-18 (8-year average)	48,861
1918-23 (5-year average)	44,770
1923-28 (5-year average)	112,927
1928-33 (5-year average)	90,962
1933-38 (5-year average)	66,255
1938-43 (5-year average)	125,678
1943-44	196,877
1944-45	217,760
1945-46	305,510
1946-47	401,297
1947-48	451,132
1948-49	492,541
1949-50	545,899
1950-51	598,274
1951-52	621,943
1952-53	558,808
1953-54	543,518
1954-55	603,828
1955-56	570,691

TONNAGE SALES

The tonnages of different grades of mixed fertilizers and fertilizer materials sold in different areas of Texas (Figure 1) during the year, and in the State during the fall and spring seasons, are shown in Table 2. These data were compiled from current reports of sales of fertilizers required by law to be sent to the State Chemist by fertilizer guarantors within 3 days after date of sales. Detailed reports of sales by counties are given in Progress Reports 1843 (fall sales) and 1890 (spring sales).

Total sales for the year were down about 4 percent from the preceding year. This reduction

was largely because of drops in sales of mixed goods during the fall season (84,784 tons in 1956 compared with 98,574 tons in 1955). Sales of mixed goods of the 1-2-1 ratio accounted for over two-thirds of the mixed goods sold during the year; sales of the 5-10-5 grade were down significantly, but those of 10-20-10 were over 50 percent greater than they were a year ago. Sales of the 1-1-1 ratio were down significantly, but they still accounted for over one-tenth of the total. Sales of the 12-12-12 grade showed a highly significant increase. Combined sales of the 1-2-1 and 1-1-1 ratios accounted for over three-fourths of the total tonnage of mixed goods. East Texas used 42 percent of the mixed goods and 61 percent of

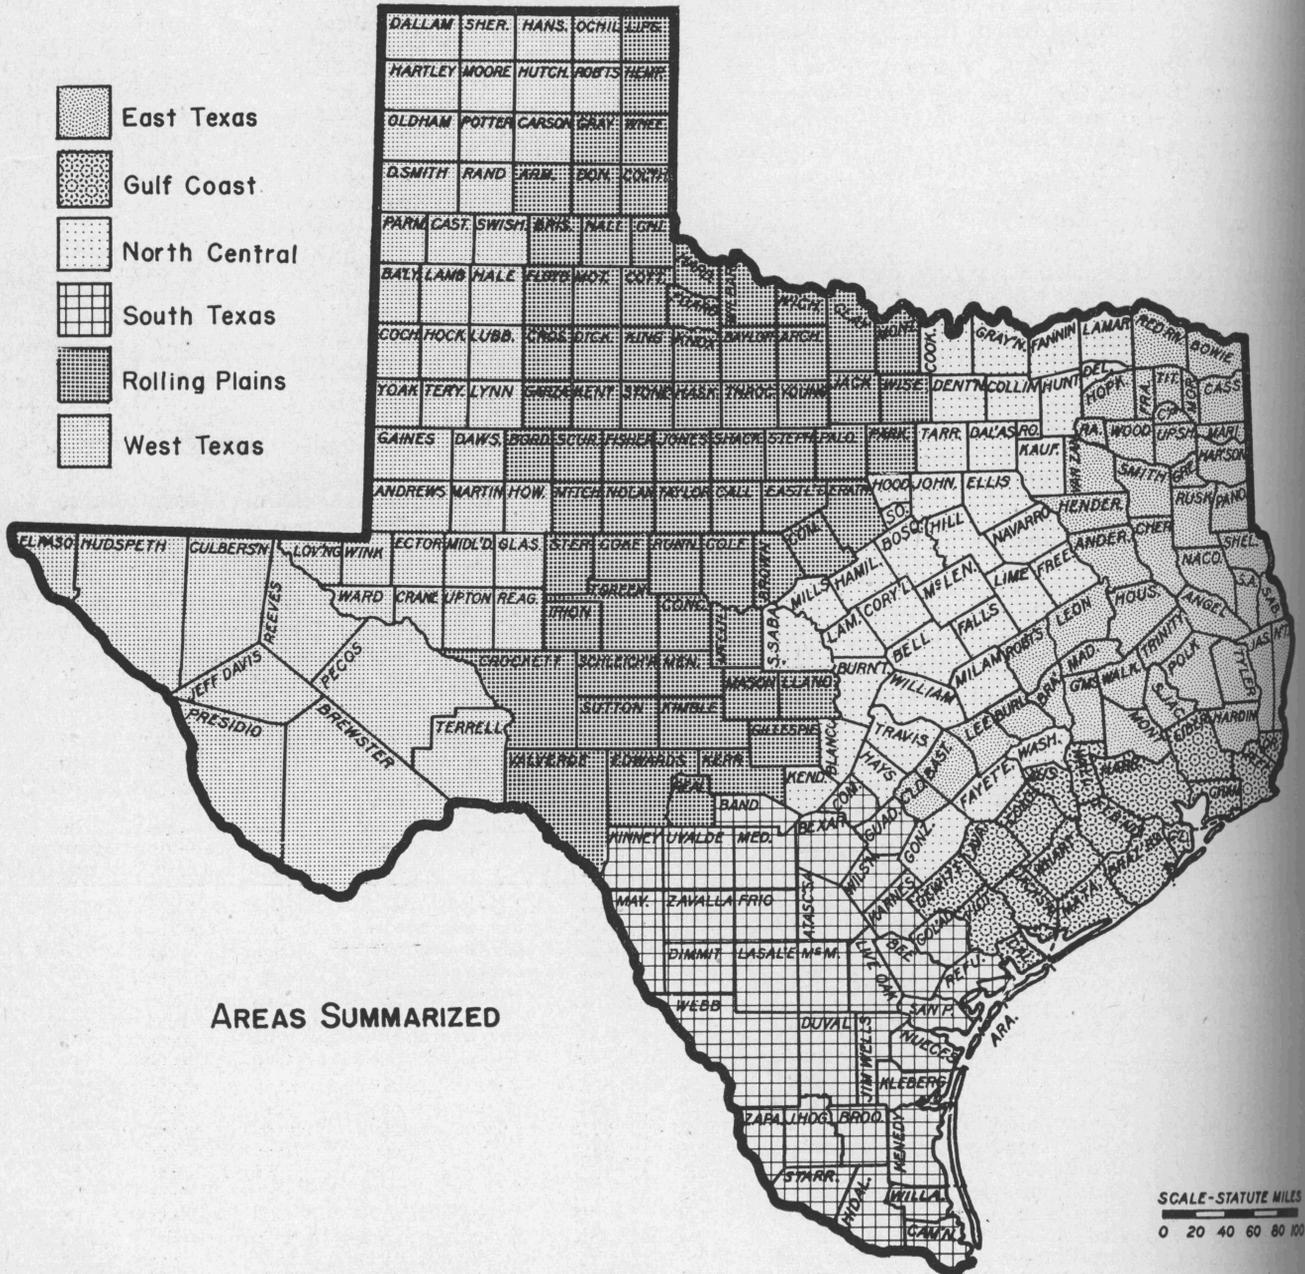

Figure 1. Geographic regions of Texas for which fertilizer data are summarized.

the goods of the 1-2-1 ratio sold in the State. East Texas, the Gulf Coast and the North Central area used 84 percent of the total mixed goods sold.

The total tonnage of materials sold during the year was only slightly higher (1 percent) than the total of mixed goods, but fall sales of materials were significantly higher (28 percent) and spring sales lower (11 percent) than those of mixed goods. Materials accounted for 16 percent of the total sold in East Texas, 57 percent of the sales in the Gulf Coast and 92 percent of the sales in West Texas. East Texas used over half (53 percent) of the ammonium nitrate sold in the State, the Gulf Coast used nearly half (47 percent) of the ammonium sulfate, West Texas used two-thirds (66 percent) of the anhydrous ammonia and West and South Texas together used nearly all (88 percent) of the nitrogen solutions used in the State. Sales of superphosphate were only about three-fourths as great as they were during the preceding year, thus continuing a trend which has been important for several years. The total of 47,424 tons of ordinary superphosphate sold during 1955-56 is only about one-

fourth of the total of 176,272 tons sold during 1949-50. Concurrent with this decrease in the consumption of superphosphates has been the marked increase in the use of nitrogenous materials, amounting to 123,851 tons in 1955-56 as compared with 32,551 tons in 1949-50, a year before anhydrous ammonia was sold on the Texas market as a fertilizer material.

The tonnages of the primary fertilizer components sold during the year, calculated from the current reports of guarantors and the guaranteed analyses, are shown in Table 3. Sales in the fall accounted for 31 percent of the nitrogen, 40 percent of the available phosphoric acid and 30 percent of the potash used during the entire year. Stated in another way, sales of nitrogen, available phosphoric acid and potash in the spring were about twice as great as in the fall. Mixed goods supplied 24 percent of the nitrogen, 50 percent of the available phosphoric acid and 97 percent of the potash. For the first time, the tonnage of nitrogen was significantly higher than that of available phosphoric acid.

TABLE 2. TONNAGES OF PRINCIPAL MIXED GOODS AND MATERIALS SOLD IN DIFFERENT AREAS AND SEASONS, AS REPORTED CURRENTLY BY GUARANTORS

Grade	By areas July 1, 1955 to June 30, 1956						Entire State

Relative to 1955	90	99	84	96	104	125	91	99	96	96

Geographic regions of Texas differed widely in the amount of primary components used. Nitrogen consumption increased markedly in all regions and particularly in West Texas, which used nearly twice as much nitrogen as was used in the East Texas or the Gulf Coast areas. East Texas and the Gulf Coast used almost half of the tonnage of available phosphoric acid. As usual, about half of the potash put out in the State was used in East Texas.

	Prices per unit
Nitrogen	\$2.75
Available phosphoric acid.....	1.75
Total phosphoric acid in tankage and bone meal70
Total phosphoric acid in rock phosphate50
Soluble potash	1.00

The valuation is calculated by multiplying the percentage of each constituent by the valuation per unit, and adding the products. Following is an example of the calculation of the valuation of a ton of a 5-10-5 fertilizer:

Nitrogen	5 x \$2.75 = \$13.75
Available phosphoric acid 10 x \$1.75 =	\$17.50
Soluble potash	5 x \$1.00 = \$ 5.00
Guaranteed valuation.....	\$36.25

VALUATION PER TON

The Texas fertilizer law requires that a refund be made to all purchasers of fertilizer if the valuation found on analysis is 4 percent or more below the valuation guaranteed, and the fertilizer shall be considered as being adulterated if the valuation found is 10 percent or more below the valuation guaranteed. A calculation of the valuation guaranteed and of the valuation found by analysis must, therefore, be made. The valuation also sums up the valuation of the three primary components (nitrogen, available phosphoric acid and soluble potash) shown in the guarantee or found in the analysis, into a single figure which is convenient for comparative purposes.

The calculation of the total valuation requires a specific valuation for each of the three constituents. The following prices per unit (1 percent of a ton, or 20 pounds) were used for this calculation in 1955-56:

The valuation guaranteed and the valuation found are used for comparative purposes in a number of the following tables.

VALUATION GUARANTEED AND FOUND

A comparison of the average valuation guaranteed by fertilizer manufacturers doing business in Texas with the valuation found upon analysis of official samples is shown in Table 4. In the preparation of this table, all analyses made were averaged, even though several were made of each brand. Fertilizer materials and mixed fertilizers were included in the calculation of the

*Excluding unacidulated phosphates, manures and composts and "other products."

averages given. In nearly all cases, the valuation found exceeded the valuation guaranteed.

Rebates found due must be paid to the purchasers of the deficient fertilizers if they can be located. If all purchasers cannot be located by the dealers' records, the rebates must be paid to some recognized local agricultural, religious or charitable organization. The number of lots on which such rebates were paid by each guarantor is shown in Table 4. Fifty-one samples were more than 4 percent below the guaranteed valuation. Most of these were of high analysis grades. Further work is needed on the technology of manufacturing these grades. Rebates amounting to \$1,585.26 were made to the purchasers.

TO OBTAIN A FREE ANALYSIS

Purchasers of commercial fertilizers for their own use on their own land (but not for sale) may obtain a free analysis of a sample, provided they take it in accordance with the requirements of the Texas fertilizer law. This privilege of a free analysis applies only to fertilizers sold under the fertilizer law and to samples taken properly so that they represent the goods sampled. The proper sampling of a fertilizer must be done carefully, and the law requires that it be taken in a certain way to insure a true sample. Those who

desire the free analysis of a sample of commercial fertilizer should write to the State Chemist, College Station, Texas, and request a copy of the form entitled "Application for Free Fertilizer Analysis." No samples will be analyzed unless the sample is accompanied by this form, properly executed.

ANALYSES OF FERTILIZERS

A total of 1,790 official samples of fertilizers and fertilizer materials was collected during 1955-56 by fertilizer inspectors in practically every town and city in the State where fertilizer was being sold. They visited the principal points of distribution several times during the year. In every case, they collected official samples of all products being sold in the towns visited. These samples were analyzed by official methods of the Association of Official Agricultural Chemists of North America, as is required by Article 98 of the Texas Civil Statutes. The analyses of these samples are given in detail in Table 5.

PUBLICATIONS ON FERTILIZERS

Two reports showing the tonnages of different fertilizers sold in each county in the State were published during the year. Fall sales are shown

in Progress Report 1843 and spring sales in Progress Report 1890. Other publications dealing with the value and use of commercial fertilizers are issued frequently by the Texas Agricultural Experiment Station and the Texas Agricultural Extension Service. Check lists of these publications will be sent free upon request to the

Agricultural Information Office, College Station, Texas. To prevent needless waste, and to insure the best distribution possible of these publications, requesters are urged to limit their requests to publications they have reason to believe will be useful immediately, and which they will take the time to study.

Location of field research units in Texas maintained by the Texas Agricultural Experiment Station and cooperating agencies

State-wide Research

★

The Texas Agricultural Experiment Station is the public agricultural research agency of the State of Texas, and is one of nine parts of the Texas A&M College System

IN THE MAIN STATION, with headquarters at College Station, are 16 subject-matter departments, 2 service departments, 3 regulatory services and the administrative staff. Located out in the major agricultural areas of Texas are 21 substations and 9 field laboratories. In addition, there are 14 cooperating stations owned by other agencies, including the Texas Forest Service, the Game and Fish Commission of Texas, the U. S. Department of Agriculture, University of Texas, Texas Technological College and the King Ranch. Some experiments are conducted on farms and ranches and in rural homes.

RESearch BY THE TEXAS STATION is organized by programs and projects. A program of research represents a coordinated effort to solve the many problems relating to a common objective or situation. A research project represents the procedures for attacking a specific problem within a program.

THE TEXAS STATION is conducting about 350 active research projects, grouped in 25 programs which include all phases of agriculture in Texas. Among these are: conservation and improvement of soils; conservation and use of water in agriculture; grasses and legumes for pastures, ranges, hay, conservation and improvement of soils; grain crops; cotton and other fiber crops; vegetable crops; citrus and other subtropical fruits, fruits and nuts; oil seed crops—other than cotton; ornamental plants—including turf; brush and weeds; insects; plant diseases; beef cattle; dairy cattle; sheep and goats; swine; chickens and turkeys; animal diseases and parasites fish and game on farms and ranches; farm and ranch engineering; farm and ranch business; marketing agricultural products; rural home economics; and rural agricultural economics. Two additional programs are maintenance and upkeep, and central services.

RESearch RESULTS are carried to Texas farm and ranch owners and homemakers by specialists and county agents of the Texas Agricultural Extension Service.
