- *Commercial Fertilizers*
- Sold during 1956-57

September 1957

TEXAS AGRICULTURAL EXPERIMENT STATION

R. D. LEWIS, DIRECTOR, COLLEGE STATION, TEXAS

DIGEST

This is the 55th annual report of the operation of the Texas fertilizer law, and covers the period from September 1, 1956 through August 31, 1957.

Fertilizers and fertilizer materials sold during the fertilizer year beginning July 1, 1956, amounted to 595,175 tons, which was a 5 percent increase over the tonnage sold during the preceding year. Sales of mixed goods decreased 4 percent, while sales of materials increased 14 percent. Grades of the 1-2-1 ratio accounted for 69 percent, and the 1-1-1 ratio for 10 percent, of the total of 270,086 tons of mixed goods sold. Nitrogenous materials accounted for 49 percent, superphosphates for 23 percent and ammoniated phosphates for 23 percent of the total of 325,089 tons of materials sold.

Analyses are given of 1,734 official samples of fertilizers. Valuations found on analyses are compared with the analyses guaranteed by the registrants.

Analyses of Commercial Fertilizers Sold during 1956-57

J. F. FUDGE, State Chemist

THIS IS THE 55TH ANNUAL FERTILIZER BULLETIN published in compliance with the Texas fertilizer law, which requires that the State Chemist shall issue at least one bulletin annually setting forth the analyses of fertilizers made under the provisions of the fertilizer law, the operations of the law and other information pertaining to the sale of fertilizer in Texas.

SOME REQUIREMENTS OF THE LAW

The law governing the sale of commercial fertilizers in Texas is found in Chapter Twelve of Title Nineteen of Vernon's Revised Criminal Statutes, 1925, and in Chapter Five of Title Four of Vernon's Texas Civil Statutes, 1925. A summary of some important requirements of the law follows. For further requirements, penalties, definitions and other detailed information, reference should be made to the full text of the law, which will be furnished by the State Chemist on request.

Materials Covered

All mixed fertilizers, fertilizer materials and all other substances which have, or are claimed to have, a beneficial effect on the soil or to promote the growth of crops, come under the law, with the exception of lime, limestone, marl, agricultural gypsum, unground bones, stockpen manure, barnyard manure and the excrement of any domestic animal in case that said manure or excrement has not been dried or manipulated or otherwise treated, or is not claimed to have a value of more than \$4 a ton.

Registration

Before a fertilizer is offered for sale in Texas, it must be registered with the State Chemist of Texas, College Station, Texas. All registrations expire on August 31 of each year, and new applications for registration must be submitted for each year. Application blanks for registration are furnished by the State Chemist, on request. The application blank must be filled out and sent to the State Chemist together with a copy of the printed bag or tag to be used. Such a bag or tag must meet the requirements of the fertilizer law. Wording on the application for registration must agree exactly with the wording on the printed bag or tag, and no change can be made in the wording on the bag or tag after it has been registered. Such change requires a new registration.

The application for registration must be accompanied by a Product Sheet on which is listed all of the materials used in the fertilizers, including the filler or conditioner, and these materials must be used in all batches. A change may be made only if it meets the requirements of the law and the State Chemist is notified. The applica-

tion for registration also must be accompanied by all printed material to be used in connection with advertising and marketing the product.

No brand name identical with or so similar to a brand name previously registered by another manufacturer as to lead to confusion can be accepted. No name which is misleading as to the ingredients of the fertilizer can be accepted. The grade of fertilizers should be part of the name of the product; for example, *Jupiter Brand Superphosphate 0-20-0* or *Mars Brand 5-10-5 Fertilizer*.

Labels

The law requires the following information to be printed on the bag or on a tag attached to the bag:

Net weight of contents of the bag.

Name of fertilizer in full.

Name and address of manufacturer, manipulator or guarantor.

Guaranteed analysis (in order given below):

Nitrogen, percent

Available phosphoric acid, percent

Potash, percent

Nitrogen refers to the total nitrogen (N) present.

Available phosphoric acid (P_2O_5) must be guaranteed in all mixed fertilizers and in all fertilizer materials, with the following exceptions. Total phosphoric acid may be guaranteed in bone meal, tankage or other similar products, but where this is done, no guarantee of available phosphoric acid can be used. If it is desired to claim available phosphoric acid only, the guarantee must take the form set forth above.

Potash (K_2O) refers to potash soluble in distilled water. No other guarantee or term can be used.

No advertising of any kind shall be printed on the label.

Inspection Fees

To finance the inspection of fertilizers and the collection and analysis of official samples of fertilizer, experiments on the value of fertilizers, and for certain other related purposes, the law imposes an inspection fee of 25 cents per ton on all fertilizers sold or offered for sale in Texas. This fertilizer inspection fee must be paid by the guarantor on the basis of and must accompany a sworn quarterly statement of sales, due in the office of the State Chemist on the first day of September, December, March and June. If the tonnage report is not filed and the payment of inspection fees is not made within 20 days after the date due, a collection fee amounting to 10 percent of the amount due must be charged against the guarantor.

Bulk Sales

Fertilizer in bulk for manufacturing purposes can be shipped only to the factory of a manufacturer who has registered fertilizer for sale in Texas.

Fertilizer in bulk cannot be sold to dealers for resale or distribution.

Registered fertilizers may be sold in bulk by manufacturers to persons, individuals or firms for their own use on their own lands, but not for resale or distribution, under rules prescribed by the State Chemist. The inspection fee must be paid on all such sales. All authorizations to sell fertilizer in bulk expire August 31 of each year.

Report of Sales

The guarantor must mail a report of each sale or shipment of fertilizer within or into Texas to the State Chemist within 3 days after such sale or shipment. The report must be made by sending to the State Chemist a copy of the invoice used in billing the customer. The invoices must be numbered, and the same number cannot be used twice during the same year. Reports of sales in bulk to manufacturers must be marked "for manufacturing purposes." Reports of sales in bulk to individuals for use on their own land must be marked "bulk sale to consumer."

GRADES APPROVED FOR 1957-58

The grade of a mixed fertilizer is stated in numbers representing the guaranteed analyses as percentages of nitrogen, available phosphoric acid and water-soluble potash. For example, a grade of 5-10-5 means that the fertilizer is guaranteed by the guarantor to contain 5 percent nitrogen, 10 percent available phosphoric acid and 5 percent water-soluble potash. The term *grade* also may refer to the percentage of a primary component in a fertilizer material, as in superphosphate, 0-20-0. Wherever practicable, the grade of a fertilizer or fertilizer material should be included as part of the full name of the fertilizer required on the label.

Fertilizers also may be described by a numerical statement expressing the relation among the primary components in its simplest form, called a *ratio*. For example, a 5-10-5 fertilizer contains 1 part of nitrogen to 2 parts of available phosphoric acid and to 1 part of potash. Consequently, this fertilizer has a 1-2-1 ratio; other grades having this ratio include 6-12-6, 10-20-10 and 12-24-12.

The grades of mixed farm fertilizers sold in Texas have been limited in number for more than 30 years. Limitation and standardization of grades reduce the cost of manufacturing and handling, thereby permitting the fertilizer to be sold to the consumer at a lower cost. They also assist the farmer in becoming familiar with the different grades of fertilizer, enable him to decide more readily on the proper grade to be used and enable agricultural specialists to make defi-

nite and simple recommendations. The ratios and minimum grades of mixed farm fertilizers to be approved in Texas during a given year are decided by the Texas Fertilizer Committee after a public hearing at which manufacturers and others interested may present recommendations. This public hearing is held annually in cooperation with fertilizer control officials, agricultural specialists and manufacturers of Texas, Louisiana, Arkansas, Oklahoma and New Mexico. The list of approved ratios and minimum grades is published in the annual fertilizer bulletin and also may be obtained on request to the State Chemist.

Following the annual public hearing on ratios and grades held at Galveston, Texas, on July 19, 1957, the Texas Fertilizer Committee took the following action:

1. Removed the 1-3-1 ratio from the approved list.
2. Raised the minimum grade in the 2-1-1 ratio to 12-6-6.
3. Continued the minimum approved concentration of 20 units in two-component mixed goods containing nitrogen and available phosphoric acid.
4. Beginning September 1, 1958, the minimum approved concentration of three-component mixed goods containing nitrogen, available phosphoric acid and potash will be 24 units.

As a result of these actions, the approved ratios and minimum grades during the year starting September 1, 1957, are:

Ratio	Minimum grade	Ratio	Minimum grade
0-1-1	0-14-14	1-2-2	5-10-10
0-2-1	0-16-8	1-2-3	4-8-12
1-1-0	10-10-0	1-4-4	3-12-12
1-1-1	8-8-8	2-1-0	14-7-0
1-2-0	7-14-0	2-1-1	12-6-6
1-2-1	5-10-5	2-2-1	10-10-5

Grades of mixed goods of the same ratios as those above, but of higher guaranteed analyses, also were approved. For example, a 12-24-12 is approved as a higher analysis of the 1-2-1 ratio.

All fertilizer materials were approved. A few products containing both nitrogen and available phosphoric acid, such as 4-16-0 (ammoniated superphosphate), 16-20-0, 11-48-0 and 13-39-0 (ammonium phosphates), also were approved as materials.

TEXAS FERTILIZER COMMITTEE

The Texas Fertilizer Committee, composed of agricultural subject-matter specialists of the Texas Agricultural and Mechanical College System and representatives of the U. S. Department of Agriculture, is appointed by the Director of the Texas Agricultural Experiment Station to advise and assist the State Chemist in the discharge of

certain of his duties, particularly with respect to ratios and grades of mixed fertilizer to be approved for registration. This committee is composed of the following:

- J. F. Fudge, State Chemist, Chairman
- G. W. Adriance, Head Department of Horticulture
- H. T. Blackhurst, Professor of Horticulture
- B. G. Hancock, Extension Horticulturist
- O. J. Moss, Agricultural Conservation and Stabilization, U. S. Department of Agriculture
- J. B. Page, Dean, Graduate School
- Donald R. Paterson, Associate Horticulturist
- J. S. Rogers, Head, Department of Agronomy
- Ben R. Spears, Extension Agronomist
- J. B. Storey, Assistant Professor, Horticulture

BRANDS AND TRADE-MARKS

The law requires the State Chemist to publish annually a list of brands or trade-marks registered with him. The following brands and trademarks were registered with the State Chemist during 1956-57:

AA Quality	C F & I	Grace
ACI-42	Champion	Gran-U-Pels
AC I-45	Chee-Ko	Green Acres
Aero	Chik-a-nure	Green Dot

Panhandle Gold	Sulfa Soil	
Pasturgro	Sul-Po-Mag	
P.D.Q.		

INSPECTION FEES COLLECTED

Fertilizer inspection fees equivalent to 626,545 tons of fertilizer were collected for fertilizer sold during the Texas fiscal year from September 1, 1956 through August 31, 1957. This tonnage is compared in Table 1 with tonnages on which fees were collected in previous periods.

All fees collected are used for the administration of the Texas fertilizer law and for research on various factors which influence the agricultural value of commercial fertilizers.

TABLE 1. FERTILIZER INSPECTION FEES COLLECTED, CALCULATED ON A TONNAGE BASIS, DURING DIFFERENT PERIODS (SEPTEMBER 1 OF ONE YEAR THROUGH AUGUST 31 OF THE NEXT YEAR)

Year	Tonnage equivalent
1905-06	13,500
1910-18 (8-year average)	48,861
1918-23 (5-year average)	44,770
1923-28 (5-year average)	112,927
1928-33 (5-year average)	90,962
1933-38 (5-year average)	66,255
1938-43 (5-year average)	125,678
1943-48 (5-year average)	314,515
1948-49	492,541
1949-50	545,899
1950-51	598,274
1951-52	621,943
1952-53	558,808
1953-54	543,518
1954-55	603,828
1955-56	566,339
1956-57	626,545

TONNAGE SALES

The tonnages of different grades of mixed fertilizers and fertilizer materials sold in different areas of Texas, Figure 1, during the year, and in the State during the fall and spring seasons, are shown in Table 2. These data were compiled from current reports of sales of fertilizers required by law to be sent to the State Chemist by fertilizer guarantors within 3 days after date of sales. Detailed reports of sales by counties are given in Progress Reports 1924 (fall sales) and 1976 (spring sales).

Total sales for the year were about 5 percent higher than during the preceding year. Sales of mixed goods were down 4 percent, but sales of

materials were 14 percent higher. Mixed goods made up 45 percent of the total tonnage, compared with 50 percent a year ago. Sales of mixed goods of the 1-2-1 ratio accounted for 69 percent and of the 1-1-1 ratio, for 10 percent of the mixed goods sold during the year. Combined sales of the 1-2-1 and 1-1-1 ratios thus accounted for more than three-fourths of the total tonnage of mixed goods. Sales of the 5-10-5 grade were down significantly, but those of 10-20-10 were 29 percent greater than a year ago. Sales of the 12-12-12 grade also showed a highly significant increase. East Texas used 48 percent of the mixed goods sold in the State, and 58 percent of the goods of the 1-2-1 ratio. East Texas, the Gulf Coast and the North Central regions used 80 percent of the

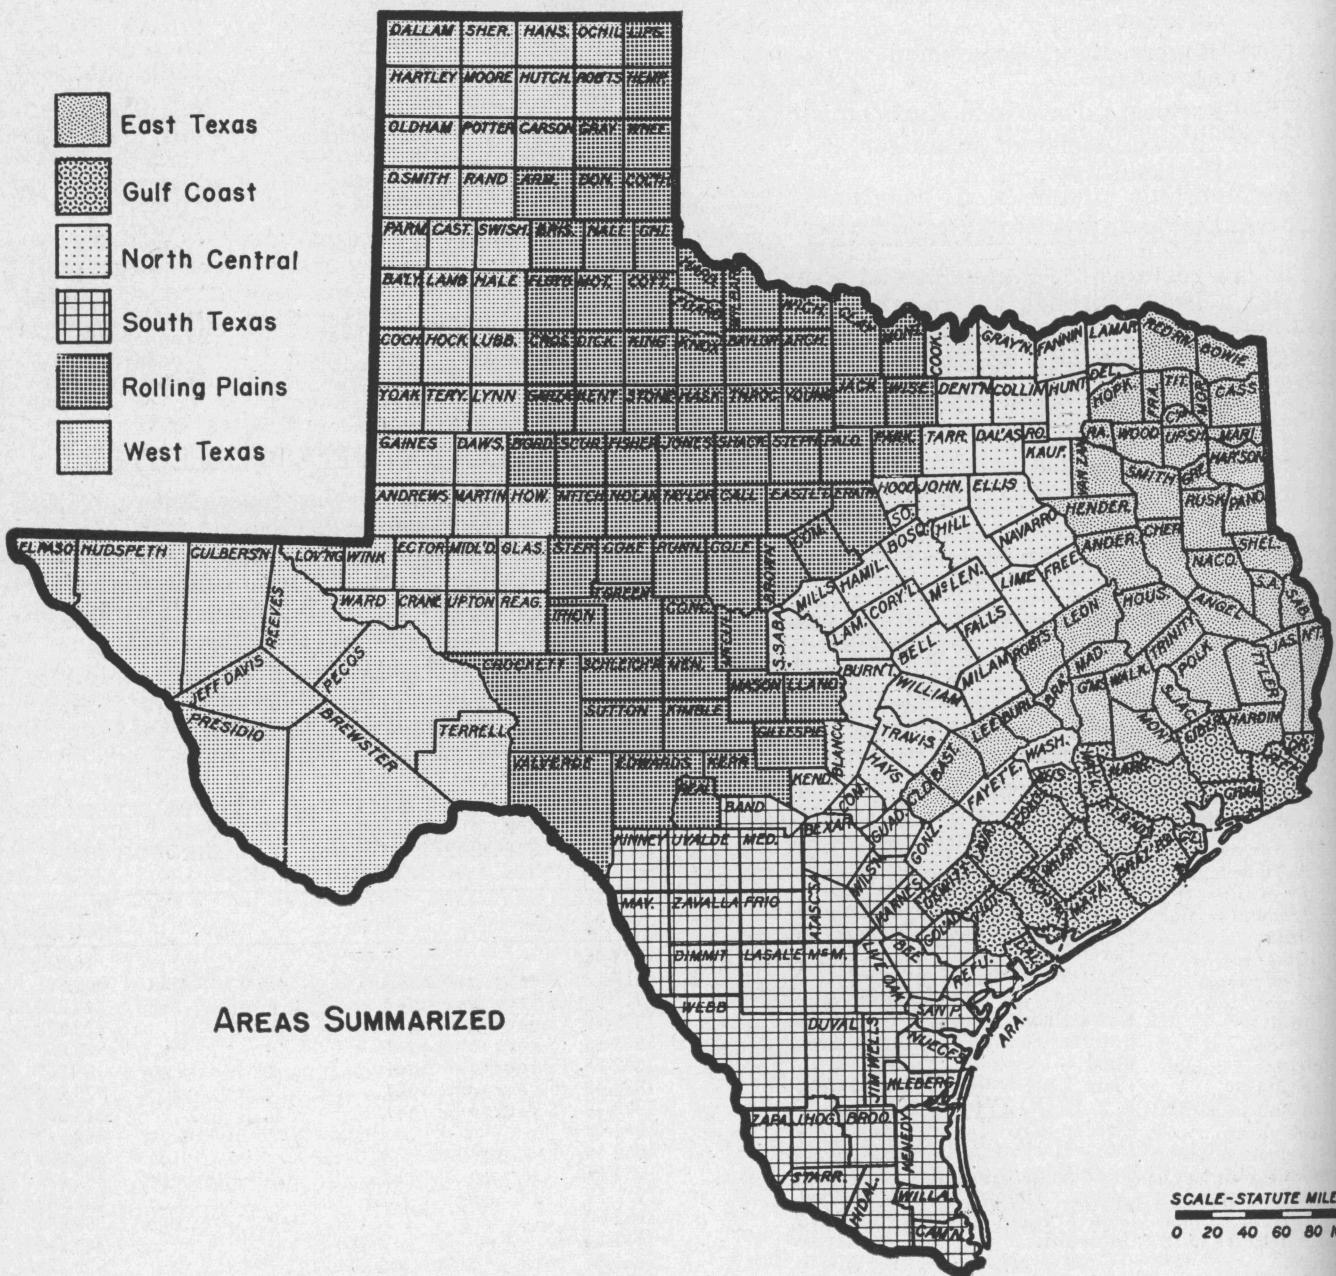

Figure 1. Geographic regions of Texas for which fertilizer data are summarized.

total mixed goods sold. Mixed goods accounted for 82 percent of the total sold in East Texas, 47 percent of the total sold along the upper Gulf Coast and less than 8 percent of the total sold in West Texas.

The total tonnage of materials sold during the year was 20 percent higher than the total of mixed goods; fall sales of materials were 30 percent higher and spring sales 16 percent higher than those of mixed goods. East Texas used half of the ammonium nitrate sold in the State, the Gulf Coast and West Texas each used about one-third of the ammonium sulfate, West Texas used 82 percent of the anhydrous ammonia, and West Texas and South Texas together used nearly all (93 percent) of the nitrogen solutions used in the State. Sales of superphosphates were about the same as during the preceding year, but there was a small increase in the proportion of concentrated superphosphates. The total of 44,232 tons of ordinary superphosphate sold during 1956-57 is only about one-fourth of the total of 176,272

tons sold during 1949-50. Concurrent with this decrease in the consumption of superphosphate has been the marked increase in the use of nitrogenous materials, amounting to 158,881 tons in 1956-57, as compared with 32,551 tons in 1949-50, a year before anhydrous ammonia was sold on the Texas market as a fertilizer material. During 1956-57, anhydrous ammonia supplied 58 percent of the materials nitrogen and 47 percent of the total nitrogen used in the State.

The tonnages of the primary fertilizer components sold during the year, calculated from the current reports of guarantors and the guaranteed analyses, are shown in Table 3. Sales in the fall accounted for 31 percent of the nitrogen, 38 percent of the available phosphoric acid and 33 percent of the potash used during the entire year. Stated in another way, sales of nitrogen, available phosphoric acid and potash in the spring were about twice as great as in the fall. Mixed goods supplied 20 percent of the nitrogen, 49 percent of the available phosphoric acid and 95 per-

TABLE 2. TONNAGES OF MIXED GOODS AND MATERIALS SOLD IN DIFFERENT REGIONS AND SEASONS, AS REPORTED CURRENTLY BY GUARANTORS

cent of the potash. The total tonnage of nitrogen was 35 percent higher than that of available phosphoric acid. Although the tonnage of fertilizers sold during 1956-57 was only 5 percent higher than during 1955-56, the total tonnage of all primary components was 14 percent higher.

Geographic regions of Texas differed widely in the amount of primary components used. Nitrogen consumption increased markedly in all regions, particularly in West Texas. East Texas used 44 percent of the nitrogen from mixed goods while West Texas used 61 percent of the nitrogen from materials. East Texas and the Gulf Coast used 45 percent of the tonnage of available phosphoric acid and 69 percent of the potash used in the State.

VALUATION PER TON

The Texas fertilizer law requires that a refund be made to all purchasers of fertilizer if the valuation found on analysis is 4 percent or more below the valuation guaranteed, and that if the valuation found is 10 percent or more below the valuation guaranteed, the fertilizer shall be considered as being adulterated. A calculation of the valuation guaranteed and of the valuation found by analysis must, therefore, be made. The valuation also sums up the valuation of the three primary components (nitrogen, available phosphoric acid and potash) shown in the guarantee or found in the analysis, into a single figure which is convenient for comparative purposes.

TABLE 3. TONNAGE OF PRIMARY FERTILIZER COMPONENTS SOLD JULY 1, 1956 TO JUNE 30, 1957, AS REPORTED CURRENTLY BY GUARANTORS AND CALCULATED FROM GUARANTEED ANALYSIS

Region	Nitrogen			Available phosphoric acid			Potash		
	Mixed	Materials	All	Mixed	Materials	All	Mixed	Materials	All

Relative to 1956	102	132	124	101	107	104	102	170	104

The calculation of the total valuation requires a specific valuation for each of the three primary components. The following prices per unit (1 percent of a ton, or 20 pounds) were used for this calculation in 1956-57:

	Prices per unit
Nitrogen	\$2.75
Available phosphoric acid	1.75
Total phosphoric acid in tankage and bone meal70
Total phosphoric acid in rock phosphate50
Soluble potash	1.00

The valuation is calculated by multiplying the percentage of each primary component by the valuation per unit, and adding the products. Following is an example of the calculation of the valuation of a ton of a 5-10-5 fertilizer:

Nitrogen	$5 \times \$2.75 = \13.75
Available phosphoric acid	$10 \times \$1.75 = \17.50
Soluble potash	$5 \times \$1.00 = \$ 5.00$

Guaranteed valuation..... \$36.25

The valuation guaranteed and the valuation found are used for comparative purposes in a number of the following tables.

VALUATION GUARANTEED AND FOUND

A comparison of the average valuation guaranteed by fertilizer manufacturers doing business in Texas with the valuation found upon analysis

of official samples is shown in Table 4. In the preparation of this table, all analyses made were averaged, even though several were made of each brand. Fertilizer materials and mixed fertilizers were included in the calculation of the averages given. In nearly all cases, the valuation found exceeded the valuation guaranteed.

Rebates found due must be paid to the purchasers of the deficient fertilizers if they can be located. If all purchasers cannot be located by the dealers' records, the rebates must be paid to some recognized local agricultural, religious or charitable organization. The number of lots on which such rebates were paid by each guarantor is shown in Table 4.

TO OBTAIN A FREE ANALYSIS

Purchasers of commercial fertilizers for their own use on their own land (but not for sale) may obtain a free analysis of a sample, provided they take it in accordance with the requirements of the Texas fertilizer law. This privilege of a free analysis applies only to fertilizers sold under the fertilizer law and to samples taken properly so that they represent the goods sampled. The proper sampling of a fertilizer must be done carefully, and the law requires that it be taken in a certain way to insure a true sample. Those who desire the free analysis of a sample of commercial fertilizer should write to the State Chemist, Col-

lege Station, Texas, and request a copy of the form entitled "Application for Free Fertilizer Analysis." No samples will be analyzed unless the sample is accompanied by this form, properly executed.

ANALYSES OF FERTILIZERS

A total of 1,734 official samples of fertilizers and fertilizer materials was collected during 1956-57 by fertilizer inspectors, who collected samples in nearly every town and city in the State where fertilizer was being sold. Principal points of distribution were inspected several times during the year. In every case, official samples of all products being sold in the towns visited were collected. These samples were analyzed by official methods of the Association of Official Agricultural Chemists of North America, as is required by Article 98 of the Texas Civil Statutes. The analyses of these samples are given in detail in Table 5.

PUBLICATIONS ON FERTILIZERS

Two reports showing the tonnages of different fertilizers sold in each county in the State were published during the year. Fall sales are shown in Progress Report 1924 and spring sales in Progress Report 1976. Other publications dealing with the value and use of commercial fertilizers are issued frequently by the Texas Agri-

TABLE 4. AVERAGE VALUATIONS GUARANTEED AND FOUND IN SAMPLES OF FERTILIZERS GUARANTEED BY DIFFERENT COMPANIES

Location of field research units of the Texas Agricultural Experiment Station and cooperating agencies

State-wide Research

The Texas Agricultural Experiment Station is the public agricultural research agency of the State of Texas, and is one of ten parts of the Texas A&M College System

ORGANIZATION

IN THE MAIN STATION, with headquarters at College Station, are 16 subject-matter departments, 2 service departments, 3 regulatory services and the administrative staff. Located out in the major agricultural areas of Texas are 21 substations and 9 field laboratories. In addition, there are 14 cooperating stations owned by other agencies. Cooperating agencies include the Texas Forest Service, Game and Fish Commission of Texas, Texas Prison System, U. S. Department of Agriculture, University of Texas, Texas Technological College, Texas College of Arts and Industries and the King Ranch. Some experiments are conducted on farms and ranches and in rural homes.

OPERATION

THE TEXAS STATION is conducting about 400 active research projects, grouped in 25 programs, which include all phases of agriculture in Texas. Among these are:

- | | |
|--------------------------------------|---------------------------------|
| Conservation and improvement of soil | Beef cattle |
| Conservation and use of water | Dairy cattle |
| Grasses and legumes | Sheep and goats |
| Grain crops | Swine |
| Cotton and other fiber crops | Chickens and turkeys |
| Vegetable crops | Animal diseases and parasites |
| Citrus and other subtropical fruits | Fish and game |
| Fruits and nuts | Farm and ranch engineering |
| Oil seed crops | Farm and ranch business |
| Ornamental plants | Marketing agricultural products |
| Brush and weeds | Rural home economics |
| Insects | Rural agricultural economics |
- Plant diseases

Two additional programs are maintenance and upkeep, and central services.

Research results are carried to Texas farmers, ranchmen and homemakers by county agents and specialists of the Texas Agricultural Extension Service

AGRICULTURAL RESEARCH seeks the WHATS, the WHYS, the WHENS, the WHERE'S and the HOWS of hundreds of problems which confront operators of farms and ranches, and the many industries depending on or serving agriculture. Workers of the Main Station and the field units of the Texas Agricultural Experiment Station seek diligently to find solutions to these problems.

Today's Research Is Tomorrow's Progress
