"Here, you're all good enough to play": Lessons Learned from the GAA Super Games

2 Centre

Dropout from youth sport participation is a significant issue that has emerged to become a major health concern around the world, with research identifying dropout rates exceeding 30% in some countries (Crane & Temple, 2015; Lee, Pope & Gao, 2018). A portion of this dropout may reflect sampling of sports, where children are trying out or transferring between different sports. However, many youth dropout from sport as a result of dissatisfaction or negative experiences (Sheridan, Coffee, & Lavallee, 2014).

In order to counteract drop out trends in sport, organizations responsible for promoting and sustaining participation have begun to redesign sport participation experiences in-line with the needs of young participants (Balish, McLaren, Rainham, & Blanchard, 2014). This redesign involves a process of modifying traditional games environments to make the participant the highest priority. Examples of such changes include reducing a pitch size (facility), modifying ball size and/or shape (equipment), and rule changes that everybody must play (regulation). In addition to these games-specific changes, researchers have also broadened the approach to consider social factors. Established correlates of youth sport drop out are largely social in nature and highlight the crucial role that coaches, parents, and teammates play in creating the conditions for continued participation in sport (Sheridan et al., 2014).

The Gaelic Athletic Association (GAA) is the largest sporting organization in Ireland (see Lavallee, Sheridan, Coffee, & Daly, 2019). In 2012, they identified a 19.38% drop-out rate involving 3,491 participants between the ages of 12-16 years. The two key contributory factors that created the conditions for drop out in the GAA were: a culture of valuing the outcome (i.e., winning) over the developmental process (i.e., achieving one's full potential);

- and, inadequate competition frameworks (i.e., the absence of a meaningful program of
- 2 regular and scheduled games). The GAA subsequently developed and tested a unique
- 3 program called the Super Games Centre as a potential solution to drop out: Coaches deliver a
- 4 set of planned modifications to the standard rules at flexible times each week and at locations
- 5 within a 20 minute drive-time radius for participants at Super Games Centres. The games
- 6 modifications are informed from six values (i.e., positive feedback, empowerment,
- belonging, effort, respect, and enjoyment) that have been shown to positively impact youth
- 8 engagement in sport (Sheridan et al., 2014). The values act as a guide to applying the
- 9 modifications to games (e.g., teams earn additional points for providing positive feedback to
- teammates and opponents; see Table 1). A study of the Super Games Centre in 2018 found
- that the drop-out trend in the GAA had been reversed, with an increase in 7,012 new 12-16
- year old participants identified (Lavallee et al., 2019).

A proliferation of research over the past decade has led to a greater understanding of the role of social support in a youth sport context. Although studies have highlighted the importance of social support as a determinant of physical activity in adolescents (Balish et. al., 2014), few research studies have examined the effect of perceived social support relative to youth sport drop out. In explaining the effect of perceived support upon intentions to drop out, it is also important to consider the role of social identity. Previous research highlighted that changing the structure of sport (e.g., rules, procedures and competition structures) may lead to more meaningful decreases in sport attrition (Balish et al., 2014). The findings from the Lavallee et al. (2019) study demonstrated that an increase in perceived support was associated with an increase in social identity, which in turn predicted intentions to drop out.

The aim of this paper is to identify key factors associated with the implementation success GAA Super Games Centre model that other sport organizations aiming to reverse drop out could consider.

GAA Super Games Centre

The following three groups were recruited to help identify lessons learned: (1) participants who attended a Super Game Centre; (2) parents with a child who attended a Super Game Centre; and, (3) individuals who provided coaching support in a Super Game Centre. A university ethics committee granted approval of the research, and prospective participants were provided with an information letter and consent form (Sheridan, 2017). A total of 15 focus groups were conducted, involving 29 players, 22 parents, and 14 coaches across Super Games Centres in five Ireland counties (i.e., Dublin, Kildare, Laois, Limerick, and Waterford). Questions were tailored to the specific focus group, and related to: experience of the Super Games Centre; factors influencing dropout; and future participation intention (Krueger & Casey, 2018). All focus groups were digitally-recorded and transcribed (duration range: 35-90 minutes). A thematic analysis approach was employed and identified the following six themes as central to the success of the GAA Super Games Centre model: peer-led promotion; fitness and skill development; friendship development in a non-competitive setting; ease of access; support-enducing environment; and inclusive games format (Krueger, 2017).

Peer-led promotion

Promotion of the Super Games Centre was found to be a key factor towards reversing sport drop-out. The focus group data highlighted the importance of assisting players to successfully appraise the available support that is contained with the games experience.

Promoting the Super Games Centre via a range of youth-centered media outlets is key in

1	ensuring that players perceive it as a positive growth promoting initiative. Peer-to-peer
2	"selling" of the Super Games Centre is an important form of promotion that was highlighted
3	as a significant growth driver. As a result, peer-led promotion forms a central part of the
4	effectively communicating games opportunities to youth participation audiences. Evidence
5	from coach focus groups highlighted the role of peer-to-peer promotion in generating
6	participation uptake within a local community context, for example:
7	And it did because they were talking to their friends about it and you could see every
8	week there was one or two more starting to come in from the local school area.
9	Evidence from the following participant focus group also highlights the significance of peer
10	support in influencing a decision to continue participation:
11	Even when it started hailstones there, one of us said 'how about we go in the hall and
12	play, just spend time passing. Rather than just saying 'oh we'll just leave' we stayed.
13	Fitness and skill development
14	The Super Games Centre enables the development of greater fitness levels among
15	participants as a result of getting more game time, which in turn reduces intentions to drop
16	out:
17	In the club setting it's more, if you play; you have to be the best. And you have to be
18	the fittest. And you have to have all this. In club it's all about whoever's best and
19	here fitness isn't an issue cause you play a lot a' football. And eventually you will get
20	fit. So last year I was very unfit and I didn't play a match at all I don't think now for
21	sure. So I finally got sick of it anyway. I was going to leave. But I came to here now
22	anyway. I got a bit more fitness and a bit more football and eventually now I got to
23	play.

1	The relationship between getting fit as a result of a getting game time and not dropping out is
2	also reflected in the following participant response:
3	So last year I was very unfit and I didn't play a match at all. I don't think now for
4	sure. I was going to leave.
5	The role of increased skill development is also influential, as highlighted by the following
6	participant:
7	So just the more matches you're playing, I think, the better you can get. If you're like,
8	like stopping and doing training and your coach is like explaining everything and
9	you're not really getting enough time. But in here you get to just keep playing and
10	playing and playing and get more touches and hitting the ball further. Like you come
11	here once. You might hit it thirty yards. And then you come here the next day and you
12	might get thirty-five. And you can keep improving all the time.
13	Friendship development in a non-competitive setting
13 14	Friendship development in a non-competitive setting Players, parents, and coaches all highlighted the significance of friendship

Like your team is like, you have to make friends with them before like you can really get to know them. Cause like there's no point calling for a ball if it's
14 15 16 17 18 19 20 21	Players, parents, and coaches all highlighted the significance of friendship development during the Super Games Centre model as a reason for continued participation. Evidence from a player perspective highlighted the importance of getting to know their peer's names in order to play the game effectively: Making friends, yeah, because like there's no point playing the sport if you don't know anyone. Like your team is like, you have to make friends with them before like you can really get to know them. Cause like there's no point calling for a ball if it's somebody you don't know, like.

1 My lads like to play each other in clubs. And they won't talk to each other. But now 2 if they went to play a club match then, 'oh there's Jamie or there's John or whatever'. 3 They, they know each other now by names and they're friends. Another parent noted: 4 5 The big thing for me was the friendship. It made him more aware of the other clubs that are out there as well. He seems to know a lot more like young lads around now. 6 And they know each other by first name. 7 Evidence from a coach perspective highlighted how relationships between participants had 8 9 become closer and led to participants arriving in groups to the Super Game Centre: They're so close out there, you know, compared to what they were the first week, like, 10 they just, even they'd come down together instead of arriving on their own. 11 12 Ease of access The focus groups highlighted the importance of location and timing concerning the 13 operation of Super Games Centres as enabling them to respond the key local forces shaping a 14 player's decision to participate in sport. A steering group, consisting of representatives from 15 the GAA Executive, academia, and coaches advised and guided the delivery of Super Game 16 Centres, including the content, locations, and timing. As a result, Super Games Centres 17 regularly changed their session times and locations in order to meet the needs of players and 18 reported a positive participation uptake in response. Several participants and parents 19 20 highlighted the importance of fitting sports into other commitments, for example: 21 You are training with the club maybe two nights a week. And then we have music on 22 Wednesdays. So it kind of fits in then on a Friday cause there's never anything on. 23 The respondents across the focus groups also reported how the ease of access to games 24 played a key role in reducing intentions to drop out. This finding was supported from both

1	player and coach perspectives. Evidence from a player perspective highlighted the
2	importance of getting games time as opposed to normal skill development experiences in
3	their club setting:
4	I was excited to come here because, well in a way I thought we were gonna be doing
5	like skills and all the usual at the club. But when I came down here the first week it
6	was just games, games, games.
7	Evidence from a coach perspective highlighted the importance of players knowing that they
8	are guaranteed a game in order to positively impact their desire to continue participation:
9	Knowing like everyone's going to get a game or be in a team because you know it
10	encourages people to turn up because they know they're going to play football and
11	they know they're going to get a game. And when you see the enjoyment of the people
12	when they are playing like instead of standing on the line looking at it, you know like
13	everyone wants to get a game, and everyone turns up to get a game.
14	Support-enducing environment
15	Evidence from a coach perspective relating to parent feedback highlighted the impact
16	of the Super Games Centre in reversing a previous decision to drop out:
17	I was speaking to another parent after, and he came over to me and he said your
18	centre is working. And I said what do you mean? He said them two lads have come
19	back to training for the last two weeks, with the club they'd gone away from last year.
20	So I says oh, right, so it obviously had the effect of confidence on the players as well,
21	they'd got an enjoyment factor back for football and they'd gone back playing.
22	Evidence from coach focus groups also highlighted the significance of positive feedback:
23	It's, I'm trying to think, it's just the environment that's there that they know that
24	they're not gonna be given out if this happens. They're coming in relaxed. They're

1	coming in knowing what, what's gonna happen. It's not, they're not, they're coming	
2	in without fear basically.	
3	This response if further supported by evidence from a parent perspective which highlighted	
4	the impact of a non-pressurized Super Games Centre experience:	
5	Well I, again it comes down to pressure I think. And he knows that no-one's gonna	
6	shout at him. Nothing's gonna happen to him. You make a mistake, no-one's gonna	
7	shout at you. No pressure. He knows he's not gonna get took off. He knows he's	
8	gonna start, play a game.	
9	Inclusive games format	
10	The inclusive games format was cited as a significant part of the Super Games Centre	
11	model from participant, coach, and parent perspectives as exemplified in the following quote	
12	from one participant: Here, you're all good enough to play. An example of evidence from a	
13	parent perspective also highlighted a non-focus on winning as critical in enabling players to	
14	enjoy the games experience and promote the Super Games Centre to their peers:	
15	They've dragged in a few more lads it's clearly the enjoyment thing, they've really got	
16	it back again and they love coming down because there's literally no, you know it's	
17	not winning or losing it's just having a bit of fun with the lads, really enjoying it. This	
18	evidence is further supported from a player perspective: when you come to the Super	
19	Game Centre like it's not as serious as a proper football match or anything like that	
20	for your club. It's just there for the craic to have with the lads like.	
21	Evidence from a coach perspective highlighted the importance of enabling participants to	

become autonomous during their games experience:

1	It opened my eyes big time how to coach kids properly so that you're not enforcing
2	them to do stuff see what they develop and see these things themselves without
3	enforcing them.
4	An example of this approach is further support by evidence from a player perspective which
5	highlighted the significance of positional freedom in impacting his intention to continue
6	participation:
7	So I can go play maybe midfield and you get a lot of touches. And then you feel like
8	you just wanna stay here for the rest a' the day and just keep playing hurling but
9	you're only here for an hour.
10	This autonomy promoting approach was further supported in this player's response:
11	Players out there are out there because they want to be out there. They're not out
12	there, they're not made to be there, say some people who are like made to do sports.
13	It's all their own choice.
14	Conclusions
15	The insights from the GAA Super Games Centre highlight a number of key
16	considerations other sports organizations aiming to reverse drop out from their sport could
17	consider. One of the most significant features identified across the focus groups with
18	participants, parents, and coaches relates to how the six evidence-based values of continued
19	participation in sport (Sheridan et al., 2014) were translated into a series of rules, which
20	enable the provision of a standardized games experience for each participant. The focus
21	groups highlighted the significance of an inclusive games format (e.g., enjoyment, autonomy)
22	in influencing intergroup relationships (e.g., friendship development, peer to peer promotion)
23	between players, teammates, and their coach in reversing the documented drop out trend.

The manipulation of the games environment also enables a greater shared support responsibility to form between the coaches, players, and parents. The consequence of this shared supportive environment leads to a range of key supports being exchanged between coaches, participants, and parents. In particular, coaches are armed with a set of values which inform a set of innovative games modifications that have a significant effect on the experience of the participants. The presence of a coaching process backed by a set of evidence-based values enables coaches to facilitate a games environment which leads to the creation of other subsequent peer-related supports between the participants. This highlights the role of the coach and the implications of having a clear coaching process in shaping and creating a support-inducing environment (Gilbert, 2016). These insights can be used to educate and inform coaches of their role as support providers in a games context. In addition, the values can be used by parents and players to outline what is to be expected from a coach in order to create and manage a games environment that is positive and growth promoting. In addition to an inclusive games format, this paper also highlighted the importance of the location and timing in reducing drop-out. The time required to reach a location is a key factor in increasing youth sport participation (O'Reilly, Parent, Berger, Hernandez, & Seguin, 2015), and Super Games Centres aimed for the the proximity of locations to be within a 20minute drive time radius by car for all participants. The flexibility of session times to accommodate competing interests of participants also allows Super Games Centres to respond to the local contexts impacting a player's decision to participate in sport or drop-out. Social support theory provided the theoretical perspective for this study, which provides an insight into some of the key factors relating to the effect of perceived support upon intentions to drop out. The factors include a perception that players have access to

games on a regular basis and the perception that the games format engenders enjoyment,

1 respect, autonomy, competence, belonging and friendship. Sheridan et al. (2014) previously

highlighted the significance of these factors in positively impacting the climate and

experience of youth sport participation.

 In terms of the role of social identity in the context of this study, the findings suggest that the modified games experience increased a sense of belonging within the social setting connected to the GAA Super Games Centre. The study findings also provide insight into a range of key factors, which helped to explain the effect that the intervention had upon coaches, parents, and players, although a limitation is that the intervention focused on male adolescents (Lavallee et al., 2019). Each of the factors (i.e., team selection ethos, friendship development, enjoyment emphasis, respect and team development) reflected the operating expectations as set down in accordance with the six Super Games Centre values. This evidence highlighted the role that an increase in social identity can play in enhancing the perception of available support within a social setting. This finding is in-line with contemporary research in a youth sport setting which has found that a common social identity is significantly associated with perceived support.

In conclusion, this paper of the GAA Super Games Centre highlights considerations other sport organizations aiming to reverse drop out from their sport could consider. Focus groups with participants, parents, and coaches identified several critical success factors that, when delivered successfully, can help reverse drop out from sport.
