

# Network Configuration Management

Xue Bai (Snow), Alex Decknadel, and Tim  
Ferrell

# How can you manage network configurations manually?

- Time investment
- Unknown state?
- Record of changes?
- What's the “right” config?
- Usually limited to local storage

# Why do we need a network configuration manager?

- Save time
- Reliable reporting
- Configuration version control
- Store the correct configuration
- Knowledge of unauthorized changes
- Worldwide availability
