

**Preparations in Comparative Anatomy removed from Dr Knox's Premises
[and written before 23rd] SEPT. 1828 - an extract from
Knox Old Catalogue, University of Edinburgh
Anatomy Archives - CRC DA 50 Anat [905].**

Transcribed by Alastair A. Macdonald and Colin M. Warwick
and discussed in:

Macdonald, A.A & Warwick, C.M. 2014. Dr John Barclay's teaching of comparative
anatomy. *Veterinary History* Vol. 17 No. 3.

Text as written and spelled, with additions and notations in square brackets.

1	Skeleton of a Cods head
2	Section of a horse's head
3	Tusks of a wild boar
4	Cranium of the turtle
5	Fore-leg of an Ass articulated
6	Skeleton of a Mule
7	Skeleton of a Gar-pike
8	Portion of the hind leg of the horse articulated
9	Skeleton of the Cat
10	Do. Do.
11	Necrosis of the Cannon bone of the cow
12	Intestines of the Turtle
13	Caecum of the Cat
14	Five crania in Comparative Anatomy under bell-glass
15	Bones of the Gar-pike on a card
16	Intestines of a bird inflated and dried to show the cloaca, oviduct and coeca
17	The stomach of a small quadruped
18	Stomach larus canus [Common gull] inflated and dried presented by Dr Burne.
19	Skeleton of the Turtle
20	Skeleton of the Cameleon
21	Trachea of a bird
22	Do Do
23	Bone of the heart in the Ox
24	Section of a heart dried to show the apex and septum
25	Two dried specimens of the Diodon [porcupinefish or balloonfish]
26	Tongue and trachea of a Turtle in spirits
27	Stapes of the bird
28	Membrana pupillaris of Dog
29	Canal of Petit in the Shark
30	XII.8 [manuscript contained no explanation]
31	Collection of birds crania under bell-glass
32	Skeleton of the Diver
33	Specimen of the Woorali poison [curare]
34	Skeleton of the Cod

35	Tail of a Monkey preparation so as to show the tendons of the flexor and extensor muscles
36	Skeleton of the Pole cat
37	Head of a young Ass
38	Separate bones of the Mole
39	Cranium of the Rabbit
40	Lower jaws of the Rabbit
41	Diseased vertebrae of Haddock
42	Kidney of a seal with veins injected
43	Small false rib found in the neck of a Lion
44	Head of the Hedge-hog
45	Section of the head of a Cat to show the bullae osseae and ossions tentorium within the cranium
46	Tooth of the fossil Rhinoceros
47	Incisive tooth of a Hippopotamus
48	Section of a Cat's head showing the interior
49	Cranium of a marrot [Common guillemot (<i>Uria aalge</i>)]
50	Cranium of a Curlieu
51	Cranium of a rat (mutilated)
52	Do.
53	Petrous portion of the temporal bone of the Dolphin
54	Larynx and part of the trachea of a small quadruped
55	Specimen of a dried Diodon [porcupinefish or balloonfish]
56	Cranium of a Cat (perfect)
57	Do. Do.
58	Cranium of a Pole cat with cervical vertebrae
59	Temporal bone of a sheep
60	Spongy bone of a Hippopotamus
61	Head of a Martin cat [European pine marten (<i>Martes martes</i>)]
62	Lower jaw of a Hare
63	Cranium of a Lamb
64	Do. of a Crow
65	Do. of a Duck
66	Do. of a Cat
67	Mutilated cranium of a Seal (presented by Mr Miller)
68	Cranium of a Newfoundland Dog
69	Cast of a Baboons head
70	Cranium of a Polar Bear presented by Mr Sloan
71	Pelvis and thigh bones of a dog being an admirable specimen of hip disease and ivory exostosis
72	Diseased bones of Haddock
73	Skeleton of a Rabbit
74	Do. of a Haddock
75	Fossil bones from the Cave of Orriston presented by Mr Clift
76	Tusk of the African wild boar
77	Skeleton of a small bird [robin?]
78	Spina ventosa of the vertebrae of a Dog

79	Pelvis of a young horse to show the additional centre of ossification in the acetabulum
80	Cranium of the Dolphin
81	Cats head
82	Section of the lower jaw of a horse to show the roots of the teeth
83	Cranium of the common pig
84	Do. of the dog
85	Do. Do.
86	Teeth of the rattle snake
87	Bristles of the Elephants tail on a card
88	Cranium of a Marrot
89	Preparation of the internal ear in a Sheep
90	Stomach of a small animal of the Mouse kind
91	Gullet and stomach of a bird
92	Portion of the intestine of the eagle showing its want of caecum
93	Specimen of the tree frog of Cuba brought home by Lord Napier and presented by Dr Brewster
94	Lateals in the Seal
95	Cicatrix seen of the lung of a Lioness Lungs perfectly healthy
96	Eyeball of the horse
97	Specimen of the Water Newt. (foreign)
98	Specimen of the Proteus presented by Dr Hodgkin
99	Stomach of a bird in spirit showing the gastric glands
100	Hyoid bone of the Turtle dissected and prepared (in turpentine)
101	Eye ball of a horse
102	Skeleton of a double headed Cat
103	Serpent in Spirits
104	Three preparations of the ossearo part of the ear of quadrupeds
105	Dried preparation of the choroid coat in the porpoise to shew the entrance of the optic nerve
106	Dried preparation of the eyes of birds to show the osseous plates
107	Stomach of a small quadruped
108	Do. of the ornithorynchus paradoxus [Duck-billed platypus]
109	Do. of Rabbit
110	Internal anatomy of the rat
111	Caput coecum of a small quadruped (dried)
112	Gland of the Beaver's stomach
113	Tongue of the Echidna
114	Intestinal tube of the New Holland bat
115	Tongue of the Ornithorynchus paradoxus [Duck-billed platypus]
116	Do. of the Lama
117	XII.W.6 [manuscript contained no explanation]
118	Gizzard of the common fowl
119	Appendix vermiformis of the Ornithorynchus [Duck-billed platypus]
120	Stomach of the Hare in spirits
	There then followed a list of six pages and two lines in Frederick Knox's hand writing, headed 'Museum of Human Anatomy 23 Sept 1828'
