## FORMING LEADERSHIP SKILLS AT MASTERS OF NURSING

Nowadays the society needs active and competent specialists able quickly and skillfully determine the aims of professional activity as well as predict attainments, overcome difficulties, build social communication and team work, reveal creativity, leadership skills and qualities.

The **objective** of the given paper is to determine the leadership skills at 6 and 7 years students of the training programme “Master of Nursing”.

**Materials and methods** used in the paper are system analyses, logical generalization.

**Results and discussion.** We consider leadership as the social position, managerial status that is connected with the decision making process, administrative position. The scientists also look at this phenomenon as the smartness, mastery, purposefulness in reaching the professional and personal aims. But it also should be mentioned that while carrying out the administrative functions primary the staff leader must think about his manages and the way how to organize their effective work and present it to the heads of the institution. He must bend every effort to manage the behavior of medical specialists and their communicative skills, correctly influence the work of every individual and the team in general. The formal chief must combine the qualities of informal leader too and find the balance between the demands of higher administration and managers, and closely follow the interests of the organization.

**Conclusion.** It was found out that forming the leadership skills at future managers’ results under the influence of personal qualities, practical experience and professional knowledge.
