**Faculty : Science**

Chemical studies were carried out on *Annona muricata* L. (Annonaceae) and *Garcinia mangostana* L. (Guttiferae). The chemical investigations covered acetogenin, triterpenoids and xanthones. These compounds were isolated using common chromatographic techniques and were identified by using spectroscopic technique such as NMR, MS, IR and UV.

Biological activities for both plants were also evaluated for their antimicrobial activities against four pathogenic bacteria and four fungi, cytotoxic activity against CEM-SS and HL-60 cell lines and larvicidal activity against *Aedes aegypti*. Larvicidal activity data have never been reported before.

*Annona muricata L.* (stem bark) have afforded one acetogenin, solamin and two triterpenoids, stigmasterol and sitosterol. Meanwhile studies on *Garcinia mangostana L.* (bark) have provided a new xanthone, mangosharin (2,8-dihydroxy-6-methoxy-5-(3-methylbut-2-enyl)-xanthone) together with six other xanthones,  $\alpha$ -mangostin,  $\beta$ -mangostin, garcinone D, xanthone 1, 1,6-dihydroxy-3,7-dimethoxy-2-(3-methylbut-2-enyl)-xanthone and mangostanol and one triterpenoid, friedelin.

Cytotoxic tests were performed using CEM-SS cell line and HL-60 cell line. The crude hexane extract of *Annona muricata L.* gave a significant activity with an IC<sub>50</sub> value of 0.8  $\mu\text{g}/\text{ml}$  against CEM-SS cell line while the crude ethyl acetate (EA) extract also gave a significant activity with an IC<sub>50</sub> value of 0.5  $\mu\text{g}/\text{ml}$  but against HL-60 cell line. The crude hexane extract of *Garcinia mangostana L.* is also considered to be active against the CEM-SS cell-line with an IC<sub>50</sub> value of 17  $\mu\text{g}/\text{ml}$ . Other than that, the pure compounds  $\alpha$ -mangostin, mangostanol and garcinone D also gave significant activities with IC<sub>50</sub> values of 5.5, 9.6 and 3.2  $\mu\text{g}/\text{ml}$  against CEM-SS cell line, respectively.

The antimicrobial activity test was also carried out using four pathogenic bacteria, namely, Methicillin Resistant *Staphylococcus aures*, *Pseudomonas aeruginosa*, *Salmonella typhimurium* and *Bacillus subtilis*. However, most of the crude extracts gave only moderate or weak activity. The pure compound  $\alpha$ -mangostin gave weak activity against *Salmonella typhimurium* and medium inhibition against *Bacillus subtilis*.

The larvicidal tests were performed against the larvae of *Aedes aegypti* using the WHO (1981) standard procedures with slight modifications. The crude hexane and ethyl acetate extracts of *Annona muricata L.* showed moderate toxicity towards the larvae by giving LC<sub>50</sub> values of less than 100 µg/ml. The crude hexane and ethanol extracts of *Garcinia mangostana L.* gave weak activities against the larvae with LC<sub>50</sub> values of more than 150 µg/ml while the crude ethyl acetate extract showed moderate activity with an LC<sub>50</sub> value of 30.1 µg/ml. Larvacidal activity on the pure compound, α-mangostin gave a LC<sub>50</sub> value of 19.4 µg/ml.

No activity was recorded for the antifungal activity tests.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia  
sebagai memenuhi keperluan untuk ijazah Master Sains

**KANDUNGAN KIMIA DAN AKTIVITI BIOLOGI DARIPADA  
*ANNONA MURICATA* (LINN.) DAN *GARCINIA MANGOSTANA* (LINN.)**

Oleh

**SHAARI BIN DAUD**

**April 2005**

Pengerusi : Profesor Madya Gwendoline Ee Cheng Lian, PhD

Fakulti : Sains

Kajian kimia telah dijalankan terhadap *Annona muricata* L. (Annonaceae) dan *Garcinia mangostana* L. (Guttiferae). Kajian kimia terperinci merangkumi jenis sebatian seperti asetogenin, tritepenoid dan xanthone. Sebatian-sebatian ini diasingkan dengan menggunakan pelbagai teknik kromatografi dan dikenalpasti dengan menggunakan teknik spektroskopi seperti NMR, MS, IR dan UV.

Aktiviti biologi untuk kedua-dua tumbuhan juga dinilai untuk aktiviti mikروبial terhadap empat bakteria dan empat fungi, aktiviti sitotoksik terhadap sel CEM-SS dan sel HL-60 dan aktiviti larva terhadap *Aedes aegypti*. Data untuk aktiviti larva tidak pernah direkodkan sebelum ini.

*Annona muricata* L. (kulit batang) telah menghasilkan satu asetogenin, solamin dan dua tritepenoid, stigmasterol dan sitosterol. Sementara itu, kajian terhadap kulit pokok

*Garcinia mangostana L.* telah memberikan satu xanthone baru, mangoshaarin (2,8-dihydroxy-6-methoxy-5-(3-methylbut-2-enyl)-xanthone bersama dengan enam xanthone yang lain,  $\alpha$ -mangostin,  $\beta$ -mangostin, garcinone D, xanthone 1, 1,6-dihydroxy-3,7-dimethoxy-2-(3-methylbut-2-enyl)-xanthone dan mangostanol dan satu triterpenoid, friedelin.

Ujian sitotoksik telah dijalankan dengan menggunakan sel CEM-SS dan HL-60. Ekstrak mentah heksana dari *Annona muricata L.* memberikan aktiviti yang kuat dengan nilai IC<sub>50</sub> 0.8  $\mu\text{g}/\text{ml}$  terhadap sel CEM-SS manakala ekstrak mentah etil asetat juga menunjukkan aktiviti yang kuat dengan nilai IC<sub>50</sub> 0.5  $\mu\text{g}/\text{ml}$  tetapi terhadap sel HL-60. Ekstrak heksana mentah dari *Garcinia mangostana L.* dianggap sebagai aktif terhadap sel CEM-SS dengan nilai IC<sub>50</sub> 17  $\mu\text{g}/\text{ml}$ . Selain daripada itu tiga sebatian tulen iaitu  $\alpha$ -mangostin, mangostanol dan garcinone D menunjukkan aktiviti yang kuat dengan nilai IC<sub>50</sub> 5.5, 9.6 dan 3.2  $\mu\text{g}/\text{ml}$  masing-masing terhadap sel CEM-SS.

Aktiviti antimikrob dijalankan dengan menggunakan empat jenis bakteria iaitu Methicillin Resistant *Staphylococcus aures*, *Pseudomonas aeruginosa*, *Salmonella typhimurium* and *Bacillus subtilis*. Bagaimanapun, kebanyakkan ekstrak mentah yang di uji dengan bakteria-bakteria ini hanya memberikan keaktifan yang sederhana dan lemah. Sebatian tulen  $\alpha$ -mangostin menunjukkan aktiviti yang lemah terhadap bakteria *Salmonella typhimurium* dan sederhana terhadap *Bacillus subtilis*.

Ujian larva telah dijalankan dengan menggunakan larva jenis *Aedes aegypti* mengikut prosedur-prosedur piawai WHO (1981) dengan sedikit pengubahsuaian. Ekstrak mentah heksana dan etil asetat daripada *Annona muricata L.* menunjukkan toksik yang sederhana terhadap larva dengan memberi nilai LC<sub>50</sub> kurang daripada 100 µg/ml. Ekstrak mentah heksana dan etanol daripada *Garcinia mangostana L.* memberikan aktiviti yang lemah terhadap larva dengan nilai LC<sub>50</sub> lebih daripada 150 µg/ml manakala ekstrak mentah etil asetat menunjukkan toksik yang sederhana dengan nilai LC<sub>50</sub> 30.1 µg/ml. Aktiviti larva pada sebatian tulen, α-mangostin memberi nilai LC<sub>50</sub> 19.4 µg/ml.

Tiada sebarang aktiviti yang direkodkan untuk ujian antifungi.

## **ACKNOWLEDGEMENTS**

I would like to express my sincere and deepest appreciation to my dedicated supervisor, Assoc. Prof. Dr. Gwendoline Ee Cheng Lian for her constant advice and guidance throughout this project. My sincere and deepest gratitude are also extended to my supervisory committee member Prof. Dr. Mawardi bin Rahmani for his support. Financial support from the Malaysian government under IRPA programme is also greatly appreciated.

I also wish to thank my labmates Fido, Aza, Sheikh, Lim, Audrey, Sooi Kim, Cheow and Gin Keat for sharing the useful advices throughout the course of my research. My special thanks go to all the staff of the Chemistry Department of UPM especially Mr. Zainal Abidin Kassim, Mr. Johadi Iskandar and Mrs. Rusnani Amirudin for helping me with MS, NMR and IR spectral data.

Last but not least, I am also indebted to my beloved family and friends whose encouragement and support have contributed towards the success of this research.

I certify that an Examination Committee met on 18 April 2005 to conduct the final examination of Shaari bin Daud on his Master of Science thesis entitled "Chemical Constituents From *Annona muricata* (Linn.) and *Garcinia mangostana* (Linn.) and Their Biological Activities" in accordance with Universiti Pertanian Malaysia (Higher Degree) Act 1980 and Universiti Pertanian Malaysia (Higher Degree) Regulations 1981. The Committee recommends that the candidate be awarded the relevant degree. Members of the Examination Committee are as follows:

**Dr. Abdul Halim Abdullah, PhD**

Associate Professor

Faculty of Science

Universiti Putra Malaysia

(Chairman)

**Dr. Taufiq Yap Yun Hin, PhD**

Associate Professor

Faculty of Science

Universiti Putra Malaysia

(Internal Examiner)

**Dr. Mohd. Aspollah Sukari, PhD**

Associate Professor

Faculty of Science

Universiti Putra Malaysia

(Internal Examiner)

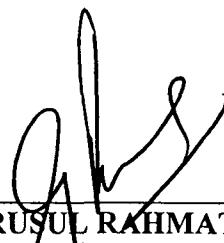

**Dr. Ibrahim Jantan, PhD**

Professor

Faculty of Allied Health Sciences

Universiti Kebangsaan Malaysia

(Independent Examiner)

**GULAM RUSUL RAHMAT ALI, PhD**

Professor/ Deputy Dean

School of Graduate Studies

Universiti Putra Malaysia

Date: 21 JUL 2005

This thesis submitted to the Senate of Universiti Putra Malaysia has been accepted as fulfilment of the requirement for the degree of Master of Science. The members of the Supervisory Committee are as follows:

**GWENDOLINE EE CHENG LIAN, PhD**

Associate Professor  
Faculty of Science  
Universiti Putra Malaysia  
(Member)

**MAWARDI BIN RAHMANI, PhD**

Professor  
Faculty of Science  
Universiti Putra Malaysia  
(Member)

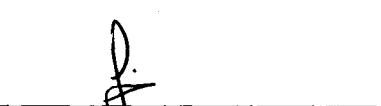

---

**AINI IDERIS, Ph.D.**  
Professor/ Dean  
School of Graduate Studies  
Universiti Putra Malaysia

Date: 11 AUG 2005

## **DECLARATION**

I hereby declare that the thesis is based on my original work except for quotations and citations which have been duly acknowledged. I also declare that it has not been previously or concurrently submitted for any other degree at UPM or other institutions.

  
**SHAARI BIN DAUD**  
Date: 20.7.2005

4.66	<sup>1</sup> H NMR spectrum of mangostanol (68) (400 MHz, CD <sub>3</sub> OD)	173
4.67	<sup>1</sup> H- <sup>1</sup> H COSY spectrum of mangostanol (68) (400 MHz, CD <sub>3</sub> OD)	174
4.68	<sup>13</sup> C NMR spectrum of mangostanol (68) (100 MHz, CD <sub>3</sub> OD)	175
4.69	DEPT spectrum of mangostanol (68) (100 MHz, CD <sub>3</sub> OD)	176
4.70	HSQC spectrum of mangostanol (68)	177
4.71	HSQC spectrum of mangostanol (68) (expanded)	178
4.72	HMBC spectrum of mangostanol (68)	179
4.73	HMBC correlations of mangosharin (117)	184
4.74	EIMS spectrum of mangosharin (117)	185
4.75	IR spectrum of mangosharin (117)	186
4.76	<sup>1</sup> H NMR spectrum of mangosharin (117) (400 MHz, CDCl <sub>3</sub> /CD <sub>3</sub> OD)	187

4.77	<sup>1</sup> H NMR spectrum of mangosharin (117) (400 MHz, CDCl <sub>3</sub> /CD <sub>3</sub> OD) (expanded)	188
4.78	<sup>1</sup> H- <sup>1</sup> H COSY spectrum of mangosharin (117) (400 MHz, CDCl <sub>3</sub> /CD <sub>3</sub> OD)	189
4.79	<sup>1</sup> H- <sup>1</sup> H COSY spectrum of mangosharin (117) (400 MHz, CDCl <sub>3</sub> /CD <sub>3</sub> OD) (expanded)	190
4.80	<sup>13</sup> C NMR spectrum of mangosharin (117) (400 MHz, CDCl <sub>3</sub> /CD <sub>3</sub> OD)	191
4.81	HSQC spectrum of mangosharin (117) (400 MHz, CDCl <sub>3</sub> /CD <sub>3</sub> OD)	192
4.82	HMBC spectrum of mangosharin (117) (400 MHz, CDCl <sub>3</sub> /CD <sub>3</sub> OD)	193
4.83	HMBC spectrum of mangosharin (117) (400 MHz, CDCl <sub>3</sub> /CD <sub>3</sub> OD) (expanded)	194

## **LIST OF CHARTS**

<b>Charts</b>		<b>Page</b>
<b>4.1</b>	Cytotoxic activity for the crude extract of <i>Annona muricata L.</i> towards the CEM-SS cell line (T-lymphoblastic leukemia).	196
<b>4.2</b>	Cytotoxic activity for the crude extracts of <i>Annona muricata L.</i> towards the HL-60 cell line (Promyelocytic Leukimia).	197
<b>4.3</b>	Cytotoxic activity for the crude extract of <i>Garcinia mangostana L.</i> towards the CEM-SS cell line (T-lymphoblastic Leukimia).	197
<b>4.4</b>	Cytotoxic activity for the pure compounds of <i>Garcinia mangostana L.</i> towards the CEM-SS cell line (T-lymphoblastic Leukimia).	198

## **LIST OF ABBREVIATIONS**

$\alpha$	alpha
$\beta$	beta
$\delta$	chemical shift in ppm
$\gamma$	gamma
$\mu\text{g}$	micro gram
br s	broad singlet
br t	broad triplet
$^{13}\text{C}$	carbon-13
$\text{CHCl}_3$	chloroform
$\text{CDCl}_3$	deuterated chloroform
COSY	Correlated Spectroscopy
d	doublet
dd	doublet of doublet
DEPT	Distortionless Enhancement by Polarization Transfer
DMSO	dimethylsulfoxide
dt	doublet of triplet
EA	ethyl acetate
EIMS	Electron ionisation mass spectrometry
g	gram
GC	Gas Chromatography
GC-MS	Gas Chromatography- Mass spectrometry
$^1\text{H}$	proton

HETCOR	Heteronuclear Chemical Shift-correlation
HMBC	Heteronuclear Multiple Bond Connectivity by 2D Multiple Quantum
HPLC	High Performance Liquid Chromatography
Hz	Hertz
IC	Inhibition Concentration
IR	Infra Red
<i>J</i>	coupling constant in Hz
<i>L.</i>	<i>LINN.</i>
l	litre
LC	Lethal Concentration
LD	Lethal Dose
m	multiplet
ml	mili litre
Me <sub>2</sub> CO	acetone
MeOH	methanol
m.p.	melting point
MS	Mass Spectrum/Spectra/Spectrometer
NMR	Nuclear Magnetic Resonance
ppm	part per million
s	singlet
t	triplet
TLC	Thin Layer Chromatography

**UV**              **Ultra Violet**

**WHO**              **World Health Organization**
