**CAREER SUCCESS OF MANAGERS AND THE MODERATING
ROLES OF GENDER AND MANAGERIAL LEVEL
IN THE MALAYSIAN PUBLIC SECTOR**

By

ROZIAH MOHD RASDI

September 2009

Chairman: Professor Maimunah Ismail, PhD

Faculty: Faculty of Educational Studies

Examination of the career literature indicated that career success studies did not consider the diverse effects of the individual, structural and behavioral approaches. In addition, there were less career success studies in testing the moderating role of gender and managerial level. Thus, this study aims to examine the factors explaining career success (objective and subjective) of managers and the moderating roles of gender and managerial level in the relationships between the career success variables. This cross-sectional correlational study was conducted on 288 managers of various managerial grades who worked in several public organizations in Putrajaya, the federal administrative center of Malaysia, and managers who attended the training program conducted by the National Institute for Public Administration. They were chosen using a stratified random sampling procedure. A quantitative survey was designed using self-administered questionnaire. Managers' career success was conceptualized using the Social Cognitive Career Theory (SCCT). The theory highlights the three main career success approaches and the reciprocal person-environment interactions, all of which explain individual's career success.

The findings of this study revealed that managers' objective and subjective career success were explained by different facets of variables. Variations in monthly gross incomes and number of promotions were explained by self-esteem, work centrality, networking behaviors, and computer skills. Computer skills negatively explained objective career success. On the other hand, variation in subjective career success was described by self-efficacy, self-esteem and organizational socialization. Managerial level moderated the relationships between the organizational and managerial competencies-related variables and both indicators of objective career success. However, gender was not a moderator in the study.

The study concluded that a profile of a successful manager is obtained showing the differential profile of factors for objective and subjective career success. Managers' career success is a function of individual, organizational and managerial competencies factors, and managers' subjective career success is influenced by organizational learning. The study also concluded that the individual, organizational, managerial competencies and P-E fit factors were no difference in the workplace in terms of gender, and managers' objective career success was influenced by managerial level. The study broadens the definition of career success measures by incorporating objective and subjective career aspects from the non-western context and addressed insufficient career success studies related to SCCT. In terms of practice, strong personalities, frequent networking and organizational learning need to become as important career development strategies for individual's career success.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia
sebagai memenuhi keperluan untuk Ijazah Doktor Falsafah

**KEJAYAAN KERJAYA PENGURUS DAN PERANAN MODERASI GENDER
DAN TAHAP PENGURUSAN DALAM SEKTOR AWAM DI MALAYSIA**

Oleh

ROZIAH MOHD RASDI

September 2009

Pengerusi: Profesor Maimunah Ismail, PhD

Fakulti: Fakulti Pengajian Pendidikan

Analisis literatur kerjaya mendapati kajian-kajian tentang kejayaan kerjaya tidak mempertimbangkan kesan pelbagai daripada pendekatan individu, struktur dan tingkahlaku. Tambahan pula, kajian kejayaan kerjaya yang menguji peranan moderator gender dan tahap pengurusan adalah kurang. Oleh itu, kajian ini bertujuan untuk memeriksa faktor-faktor yang menerangkan kejayaan kerjaya (objektif dan subjektif) pengurus dan peranan moderasi gender dan tahap pengurusan dalam hubungan antara angkubah-angkubah kejayaan kerjaya. Kajian rentas korelasi ini telah dijalankan ke atas 288 pengurus dari pelbagai gred pengurusan yang telah bekerja di beberapa organisasi awam di Putrajaya, iaitu pusat pentadbiran persekutuan Malaysia, dan pengurus-pengurus yang telah menghadiri program latihan yang dikendalikan oleh Institut Tadbiran Awam Negara. Mereka dipilih menggunakan prosedur persampelan rawak berstratifikasi. Satu survei kuantitatif telah direka bentuk menggunakan borang soal-selidik yang dikendalikan sendiri oleh responden. Kejayaan kerjaya pengurus telah dikonsepsualisasikan menggunakan Teori Sosial Kognitif Kerjaya (TSKK). Teori ini menggariskan ketiga-tiga pendekatan utama kejayaan kerjaya dan interaksi timbal-balik individu-persekitaran, yang kesemuanya menerangkan kejayaan kerjaya individu.

Hasil kajian menunjukkan bahawa kejayaan kerjaya objektif dan subjektif pengurus-pengurus diterangkan oleh pelbagai variasi kumpulan angkubah. Variasi dalam pendapatan kasar bulanan dan bilangan kenaikan pangkat telah diterangkan oleh penghargaan sendiri, penumpuan kerja, tingkah laku jaringan kerja dan kemahiran komputer. Kemahiran komputer telah menerangkan kejayaan kerjaya objektif secara negatif. Sebaliknya, variasi dalam kejayaan kerjaya subjektif telah dihuraikan oleh efikasi diri, penghargaan sendiri dan sosialisasi organisasi. Tahap pengurusan telah memoderasikan hubungan antara angkubah-angkubah organisasi dan kompetensi pengurusan dengan kedua-dua indikator kejayaan kerjaya objektif. Walau bagaimanapun, gender didapati bukan satu moderator dalam kajian ini.

Kajian ini merumuskan bahawa satu profil seorang pengurus yang berjaya terhasil yang menunjukkan perbezaan profil faktor kejayaan kerjaya objektif dan subjektif. Kejayaan kerjaya pengurus merupakan satu fungsi faktor-faktor individu, organisasi dan kompetensi pengurusan, dan kejayaan kerjaya subjektif pengurus dipengaruhi oleh pembelajaran organisasi. Kajian juga merumuskan bahawa faktor individu, organisasi, kompetensi pengurusan dan kesesuaian individu-persekitaran adalah tidak berbeza di tempat kerja daripada segi gender, dan kejayaan kerjaya objektif pengurus dipengaruhi oleh tahap pengurusan. Kajian ini meluaskan definisi pengukuran kejayaan kerjaya dengan mengambil kira kejayaan kerjaya objektif dan subjektif dari konteks timur dan telah mengisi kekurangan kajian-kajian kejayaan kerjaya yang berkait dengan TSKK. Dari segi praktik, kekuatan personaliti, kekerapan jaringan kerja dan pembelajaran organisasi perlu menjadi strategi perkembangan kerjaya yang penting untuk kejayaan kerjaya individu.

ACKNOWLEDGEMENTS

In the name of Allah (*SWT*), the most Compassionate and the most Merciful, to whom I owe the strength and sense of purpose that have enabled me to undertake this dissertation, and without His grace and blessings it would not have been completed. Also, *salawat* and *salam* to Prophet Muhammad (PBUH), his family and his companions.

First, I would like to say a prayer for my late father, Mohd Rasdi bin Rais for his love, guardianship and ambition. My deep appreciation and love also go to my mother, Rukiah binti Abdullah for her consistent prayers and encouragement, as well as support and sacrifice, which will always be remembered but can never be repaid.

My heartfelt gratitude and appreciation go to my dissertation committee with Professor Dr. Maimunah Ismail as Chair, and Associate Professor Dr. Jegak Uli and Associate Professor Dr. Sidek Mohd Noah as members. These academics were a source of inspiration, motivation and support in all its form to me. To all the committee team, the gesture of putting at my disposal whatever I needed to complete this work would be cherished for the rest of my life.

This research effort also represents a culmination of great support of many organizations to whom I am deeply grateful. I thank the Universiti Putra Malaysia for the efforts given and full time paid leave for me to pursue this work. Special thanks also goes to the public organizations involved which located at Putrajaya and INTAN for the various official support and assistance rendered especially during the process of data collection. My appreciation is also extended to the 288 managers of the Malaysian public

organizations for their participation and cooperation in providing me with the research data.

Last but not least, my profound gratitude and deep love to the people of my life, my husband, Dr. Nik Mohd Asri bin Nik Long and our children, Nik Muhammad Ameer, Nik Nurul Aisyah, Nik Muhammad Amar, Nik Muhammad Aiman and Nik Muhammad Annas; and to the rest of my family for everything they have done and continue to do for me. I dedicated this work to these people for their endurance, steadfast love and timeless support to me.

I certify that a Thesis Examination Committee has met on 4 September 2009 to conduct the final examination of Roziah Mohd Rasdi on her thesis entitled “Career Success of Managers and The Moderating Roles of Gender and Managerial Level in The Malaysian Public Sector” in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The committee recommends that the student be awarded the Doctor of Philosophy.

CHAPTER I

INTRODUCTION

Background of the Study

Managers in the public sector are facing fundamental organizational changes (Cappelli, 1992; Martin & Butler, 2000), while government reforms in administrative and management reach down to managers' agenda. As public sector managers embrace the changing nature of management career, a new set of values, skills, competencies and practices are demanded for successful career. Accordingly, public sector managers have to fully manipulate their human capital as well as utilize other organizational resources in order to succeed in the management world. Nevertheless, public sector managers have also reconstructed their views and values toward success (Littler, Wiesner & Dunford, 2003), where traditional definition of career success is no longer valid (Hay & Hodgkinson, 2006).

This study focuses on the career success of managers employed in the Malaysian public services. According to Van der Heijden (2006), a complicating factor that is unique to the public sector is due to its different operating environment, which is characterized by ill-structured and wicked problems. A distinct characteristic between the public and the private sectors noted by Flynn (1993) is that the public sector is not generally run to make a profit, and therefore, there is no competition in the sense of organizations trying to entice customers away from their competitors. With respect to measuring organizational and individual performance, Flynn (1993) further pointed out that politicians may have their direct or indirect influences on performance evaluations.
