Project Support

This project could not be accomplished without the financial support of the Provost's Office at the University of Pittsburgh, the space provided by the School of Education's Department of Administrative and Policy Studies, and the assistance of the Technical Support Office.

Funding has also been generously provided by the American College Counseling Association. ACCA actively promotes ethical professional counselor practice and training in higher education settings. ACCA also offers opportunities for advocacy and leadership, provides continuing education, facilities communication within the profession, funds and disseminates research, and publicity recognizes meritorious contributions to the profession.

ACCA Website: <u>www.collegecounseling.org</u>

The publisher of this monograph is the International Association of Counseling Services (IACS). As the accrediting agency for counseling centers in a wide variety of settings, the primary objective for IACS is the maintenance of quality service delivery. The basic purposes of the Association are to encourage and aid counseling centers and agencies to meet high professional standards, to inform the public about those that are competent and reliable, and to foster communication among the centers and agencies.

IACS Website: <u>www.iacinc.org</u>

Overview

The National Survey of Counseling Center Directors has been conducted since 1981 and includes data provided by the administrative heads of college and university counseling centers in the United States and Canada.

The survey attempts to stay abreast of current trends in counseling centers and to provide counseling center directors with ready access to the opinions and solutions of colleagues to problems and challenges in the field. The areas addressed cover a range of concerns including budget trends, current concerns, innovative programming, and a number of other administrative, ethical and clinical issues.

2010 Survey Highlights

More complete data by institutional size are provided with the survey data.

- 58% of directors and 69% of staff in the survey are women. Most directors identify themselves as counseling psychologists (38%). 24% are clinical psychologists, 19% are professional counselors, 8.5% are social workers, and 4% are mental health professionals. Two directors are psychiatrists. Others include student personnel administrators (6), nurse or nurse practitioners (5), marriage and family therapists (4), a physician and a school psychologist.
- 2. The 320 centers surveyed represent 2.75 million students who are eligible for counseling services at their institutions.
- 3. 6.7% of centers charge for personal counseling, down from a peak of 17.2% in 1996. Only 1.9% of centers collect third party payments. The mean fee centers charge is \$14.00 and the mean annual income is \$41,000 (Items 1-2).
- 4. 42.5% of centers are supported by mandatory fees; 23% comes from student health fees, 16% from a student life fee, and 3.5% from a counseling center fee (Item 3).
- 10.8% of enrolled students sought counseling in the past year. This represents approximately 317,000 students from the surveyed schools. 38.3% (almost 4 times as many) were seen by counselors in other contexts (workshops, orientations, classroom presentations, etc.) (Items 4 & 6).
- 6. The ratio of counselors to students is 1 to 1,600. Smaller schools have better ratios (Item 5).
- 7. 27% of centers tend to place limits on the number of client counseling sessions allowed. 44% do not have a session limit policy but promote their centers as a short-term service and rely on counselors to make responsible judgments about how long a student can be seen. 29% tend to see students as long as necessary to resolve the presenting problems but will make external referrals when clinically advisable (Item 7).
- 8. The average number of counseling sessions for all students is 5.6 sessions per client. Based on earlier surveys this average tends to be approximately the same for time-limited counseling centers and for centers that do not have formally established limits (Item 8).
- 9. 56% of schools have on-campus psychiatric services available to students. On average these schools provide 20 hours a week of psychiatric consultation. When broken down further, for every 1,000 students there are, on average, 1.8 psychiatric consultation hours per-week available (Items 9-10).

- 10. 24% of center clients are on psychiatric medication. This is up from 20% in 2003, 17% in 2000, and 9% in 1994. In addition, 85% of directors believe that there is an increase in the number of students coming to campus who are already on psychiatric medication. Also 13.6% of counseling center clients are referred to a psychiatrist for further evaluation, (Items 11-14).
- 11. 91% of directors report that the recent trend toward greater number of students with severe psychological problems continues to be true on their campuses. In addition, over the past five years, the following percentage of directors have noted increases in the following problems: (Items 15a-15k)
 - 70.6% Crisis issues requiring immediate response
 - 68.0% Psychiatric medication issues.
 - 60.0% Learning disabilities.
 - 45.7% Alcohol abuse.
 - 45.1% Illicit drug use (Other than alcohol).
 - 39.4% Self-injury issues (e.g. Cutting to relieve anxiety.
 - 25.2% On-campus sexual assault.
 - 24.3% Eating disorders
 - 23.2 Career planning issues.
 - 23.1% Problems related to earlier sexual abuse.
- 12. 28.6% of centers have a waiting list problem during the busy time of the year (Item 16).

13. What centers do to manage case-loads (Item 17).

- 76.6% Clients who are not in crisis are seen less frequently.
- 66.6% Staff take on an overload during busy times.
- 56.6% No automatic weekly appt. Appt. Scheduled as schedule permits.
- 48.4% Staff manage caseloads so no wait list develops.
- 20.6% Part time staff added during busy times.
- 16.9% Staff work overtime without compensation or release time.
- 12.8% Clients, not in critical need, moved into groups.
- 11.6% Staff work overtime for compensation or release time.
- 11.9% Other: triage, half-hour appointments, brief therapy models, referral.
- 14. Directors report that 44% of their clients have severe psychological problems. 6.3% of these have impairment so serious that they cannot remain in school or can only do so with extensive psychological/psychiatric help, while 37.7% experience severe problems but can be treated successfully with available treatment modalities (Items 18-19).
- 15. Item 20 provides information on what centers are doing to address the increase of students with serious psychological problems.

- 59.4% increased the amount of time training faculty and others to respond in a helpful way to students in trouble and to make appropriate referrals.
- 55.6% served on campus-wide Student Assistance Committees.
- 54.7% provide psycho-educational assistance on center websites.
- 53% expanded external referral networks.
- 49.1% increased training for staff in working with difficult cases.
- 31.2% increased counseling center staff.
- 28.1 % increased psychiatric consultation hours.
- 19.9% increased part-time counselors during busy time of year.
- 17.5% increased training for staff in time-limited therapy.
- Other actions taken include providing more mandated suicide assessments, providing gatekeeper training to students, faculty and staff, extended evening hours, and making more use of peer education groups.
- 16. 283 centers hospitalized an average of 8 students per school (2,200 students in all) for psychological reasons. The average number of hospitalizations per 1,000 students was 1.4 (Items 21-22).
- 17. The percentage of directors that report staff are spending an increased amount of time on the following activities is as follows: (Item 23)
 - personal counseling (74.3%),
 - campus consulting (74%),
 - responding to parents (53.6%),
 - case documentation (51.3%),
 - group therapy (34.7%),
 - committee work (34%),
 - structured groups (23.1%).

18. Activities that centers have taken to more efficiently manage caseloads(Item 24):

- No longer providing students with a regular holding appointment. Students make next appointment as counselor's schedule allows. (50.6%)
- Once schedules are full, new clients are distributed equally among counselors and they are responsible for managing their case load. (23.4%)
- Using a computerized assessment/intake system. (15%)
- Assigning more students to groups directly from intake/assessment. (14.7%)
- Using telephone assessment/intake system. (9.1%)
- Using a waiting list "support" group until individual counseling is available. (3.4%)
- Other strategies: an urgent care triage system, stress management classes, and reminders to staff to refer out whenever possible. (11.9%)
- 19. Directors reported 133 student suicides in the past year. 13% of these were current or former center clients, 79% were males, 88% were undergraduates, and only 19% of the suicides occurred on-

campus. 83% were Caucasian, 7% were Asian or Pacific Islanders and 4 % were African American. To the extent that it was known, 84% of the students were depressed, 56% had relationship problems, 20% had academic problems, 18% had financial concerns, and 12% had health issues. In addition, 27% were on psychiatric medication, and 18% were known to have had previous psychiatric hospitalizations. Directors, however, did not know the previous psychiatric history of 64% of these students. Also, 28% committed suicide by hanging, 25% by use of a firearm, 9% by ingesting toxic substances, 6% by jumping, and 32% by other methods (Items 25-35).

- 20. When a client is a suicidal risk but does not meet criteria for involuntary hospitalization, 41% of directors would not notify anyone without a signed release from the student, 22% would notify the person to whom they report, 13% would notify family, and 5% would notify residence life staff. 19% of the directors in this situation stated that their response would vary depending on the specific situation. (Item 36)
- 21. 63 centers (20%) in the past year gave 99 warnings about students who posed specific dangers to others. 57% of these warnings were given to police, 52% to the potential victim, and 36.5% to others such as campus safety, Chief Student Affairs Officer, residence life staff and parents of the distressed and threatening student (Items 37-39).
- 22. 59% of directors report that because of recent tragedies on college campuses they have experienced increased pressure to share their concerns about troubled students who might pose a risk to others even if not to a specific person. Because of this reality, 49% of directors report that they are more likely to ask such students for permission to contact parents, residence life staff or higher level administration about their concern, 28% are more likely to increase the level of therapy for these students, 27% will refer these students out to settings more capable of treating such students, and 9% will express their concerns to student and alert appropriate others, even without the student's permission (Items 40-41).
- 23. 28% of directors report a marked increase in student violence on college campuses over the past five years (Item 42).
- 24. Approximately 60% of counseling centers now ask former clients if their counseling experience helped them remain enrolled in their institutions and whether it helped with their academic performance. In spite of the fact that most students do not come to counseling centers for these specific reasons, 59% indicated that it helped them remain in school and 60% stated that counseling helped better their academic performance. (Items 43-44)
- 25. 67.3% of directors reported that their job was more stressful than it was 5 years earlier. If only directors who had been in that position 5 years ago were queried, then the percentage would have been 94.6%. The reasons given included: time pressures (75%,)increased administrative demands (74%), budget issues (65%), Managing the increased pressures on center due to the increasing complexity of student problems (61%), and growing expectations on campus for counseling centers

to reduce the possibility of tragic campus events (46%). Other contributors to director stress are included in the main body of the report. (Items 45-46)

- 26. 95% of directors report that female students tend to over utilize their services relative to their campus percentage while the vast majority of directors state that men, international students, African American students and sexual minorities tend to underutilize counseling services. (Item 47)
- 27. 65% of center clients are female and 35% are male. (Item 48)
- 28. 9.4% of counseling center clients are referred out to external practitioners for more specialized or intensive treatment. (Item 49)
- 29. 76% of centers receive requests from government agencies accompanied by a student release form requesting information about a former client's psychological history. 29% of centers receive similar requests from Law Boards. Less than 15% of centers have a policy indicating that no information will be provided. Most will provide some information but vary in whether they will first contact the former client. Most centers 67% do not typically inform clients that in the future they may be pressured to sign such release forms. (Items 51-53)
- 30. While 64% of directors would be in favor of a professional standard stating that mental health professionals are not permitted to release student records to anyone other than other treating professionals (barring a court order) even with the signed release of the client, most write-in comments opposed such a standard. These respondents felt that the standard would be overly protective, overkill, simplistic, not in the student's best interest, and that it is a mistake to assume that law bars and federal agencies would be punitive in their hiring of individuals who had a psychotherapy history. Those in favor express concern about blanket release forms, the fact that the information may be quite old and not particularly relevant, that providing even non-critical information makes our confidentiality policies meaningless, and that making judgments based on earlier counseling sessions about whether a person is a risk to others goes beyond most of our skill levels. The intensity of the responses suggests that this would be a good topic for further discussion on the listserv or at a future conference. (Item54)
- 31. A full-time counselor whose primary responsibility is counseling has, on average, a case load of 25.6 client contact hours per week. This is approximately true across all institutional size dimensions. (Item 55)
- 32. A dozen years ago Total Quality Management (TQM) was highly recommended as a strategy for managing counseling programs. 42% of today's directors have never heard of it, and only 6% of directors utilize it. (Item 56)
- 33. Directors reported that they were involved with 358 cases of obsessive pursuit or stalking during the past year. They also noted that 168 students were physically injured and 7 were killed by their

pursers. (Items 57-60)

- 34. 44% of responding centers hire part-time counselors every year for an average salary of \$33 per hour. No additional benefits are provided. 77% of their time is devoted to direct service and 93% of directors find them to be extremely helpful or moderately helpful in managing the center's caseload. (Item 61-63)
- 35. Many schools evaluate counseling center staff using an institution wide format with ratings such as underperforming, performing at an expected level, going beyond an accepted level, and in some instances achieving at an unusually exceptional level. Frequently the expectation is that most people are performing at an accepted level and are only rated higher if strong measurable evidence can be provided. 75% of directors believe that their counselors are doing very good work and that giving them a "doing their job" rating is viewed as a "C" grade. They find this form of assessment to be bureaucratic, unproductive and demoralizing. (Item 64)
- 36. When directors were asked what kind of criteria they use to assess staff performance, 64.4% used both job description and annual goal setting, 48.4% use criteria based on job description alone, 42% establish goals annually for each staff member, 24% use client outcome data, and 11% have counselors contract for services to be provided in any given year. (Item 65)
- 37. 42.7% of centers that utilize client evaluations now do these evaluations online. and 26% are moving in this direction. (Item 66)
- 38. 21.2 % of responding centers are IACS accredited. The benefits listed include increased status and credibility on campus (88%), greater respect by administration (88%) helps to maintain professional standards (83%), supports requests for new positions or salary increases (65%), the valuable feedback generated by having an external review (65%), and it helps in generating new ideas (32%). (Item 67)
- 39. When directors were asked about the disadvantages of IACS accreditation, most of the respondents were not from accredited centers and stated that this was because of expense. Several individual responses included remarks that the process takes too long, that field visitors don't always come from similar sized institutions, that insisting front-office staff be professional is unrealistic for some centers, that the standards don't work for integrated health and counseling programs and that the recommended counselor student ratio of 1-1000 or 1,500 doesn't reflect the ratio in different size institutions. (Item 68)
- 40. Check item 70 for director's salaries broken down by size of institution, number of FTE staff, and experience as director.

3.) If your center is IACS accredited, what are the benefits of IA	ACS accredit	ation? (Chec	k all tha	at apply)												
Increases status and credibility of center on campus		100%	3		84.6%	11		78.9%	15		93.3%	28		87.7%		
Supports requests for new resources		33.3%	1		61.5%	8		63.2%	12		50%	15		55.4%		
Supports requests for new staff positions and salary increases		33.3%	1		46.2%	6		68.4%	13		73.3%	22		64.6%		
The valuable feedback generated by an outside review and evaluation		33.3%	1		76.9%	10		68.4%	13		60%	18		64.6%		
Helps us to maintain professional standards		100%	3		76.9%	10		89.5%	17		80%	24		83.1%		
Accreditation is respected by administrators		66.7%	2		92.3%	12		89.5%	17		86.7%	26	İ	87.7%		
Generates new ideas		66.7%	2		30.8%	4		36.8%	7		26.7%	8		32.3%		

69.) Please list any disadvantages to IACS accreditation:

While most counseling centers that are IACS accredited report great benefits to their accreditation, directors were also asked if there were any disadvantages to IACS accreditation 38 directors responded. Most of these were not from accredited centers and 32 (84%) of them indicated that the primary problem was expense. The other respondents commented that standards do not take school size into consideration, that the process takes too long, that field visitors should come from similar types of institutions, that insisting front office staff be professionals is unrealistic for some centers, that the standards don't work for integrated health and counseling programs that have a shared electronic health record and that the ratio of 1-1,000 or 1,500 doesn't reflect the ratios in different size institutions.

List Directors salary for the appropriate staff size and experience level category.
