ANALYSIS AND RESEARCH OF EXISTING ERASMUS + PROJECTS FOR STUDENTS

M. Tytarenko, L. Kabak, O.A. Yakunin
(Ukraine, Dnipro, NTU «Dnipro Polytechnic»)

Nowadays, the analysis of existing exchange programs is an important task for students. The importance of this work is that it makes it possible to find the necessary program for students, based on their knowledge and capabilities. There are a huge number of exchange programs, but it is very important to find the program on which student will be the best candidate and where student have the right to participate.

Erasmus+ stands for European Community Action Scheme for the Mobility of University Students. It's a Higher Education exchange program for students, teachers and institutions, run in the UK by the British Council. Basically, it's a chance for universities and students across 33 countries to mingle, learn new skills, expand their horizons, study for 1-2 semesters or doing an internship abroad in another country for a period of at least 2 months and maximum 12 months per cycle of studies.

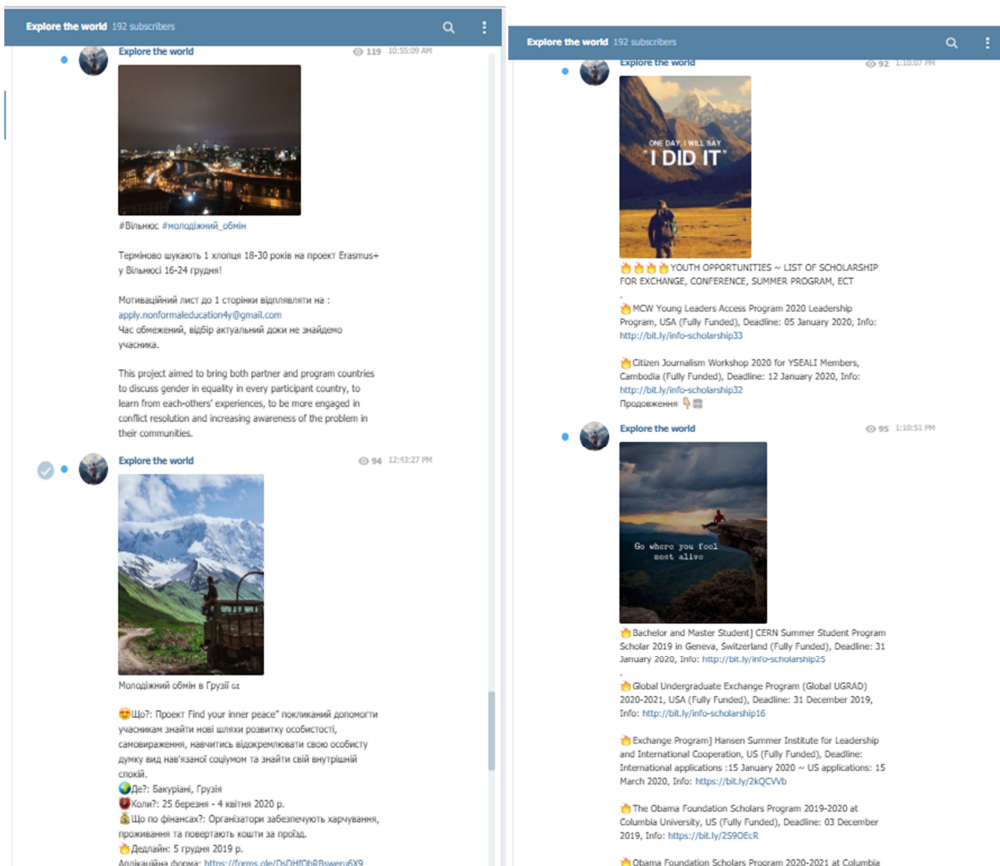

Erasmus+ has opportunities for people of all ages, helping them develop and share knowledge and experience at institutions and organizations in different countries.

There are 5 types of programs:

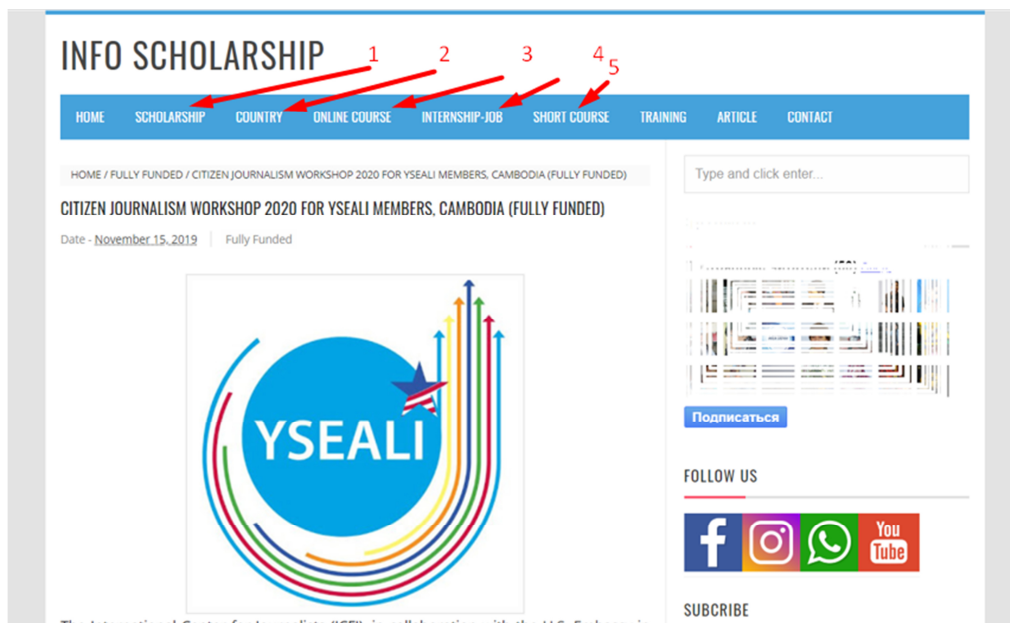

- Study abroad with Erasmus+
- Erasmus Mundus Joint Master Degrees
- Youth Exchanges
- Teach abroad with Erasmus+
- Traineeships with Erasmus+

I am currently working on a channel to collect and release the latest student programs. The goal is to release posts with different terms and conditions for the programs. This allows students with various knowledge, specialties, and skills to find a suitable program. Moreover, this creates the conditions for the most effective selection of programs for the student.

Every day I post the latest information and opportunities for students. Here is an example of my channel, which in the future will be in the form of an automated web application with a database of new programs.

In this example, only the prospect of the development of this topic is indicated.

The following is an example of a web application that is planned to be developed in the future. In order to select an individual program for each student.

There will be 5 main tabs with categories of basic student search: Scholarship, Country, Online course, Internship-job, Short course. This will speed up the search and help the work of both the international department and students. Herein lies the basic concept.
