

## A Reduced Dantzig-Wolfe Decomposition for a Suboptimal Linear MPC - DTU Orbit (08/11/2017)

### A Reduced Dantzig-Wolfe Decomposition for a Suboptimal Linear MPC

Linear Model Predictive Control (MPC) is an efficient control technique that repeatedly solves online constrained linear programs. In this work we propose an economic linear MPC strategy for operation of energy systems consisting of multiple and independent power units. These systems cooperate to meet the supply of power demand by minimizing production costs. The control problem can be formulated as a linear program with block-angular structure. To speed-up the solution of the optimization control problem, we propose a reduced Dantzig-Wolfe decomposition. This decomposition algorithm computes a suboptimal solution to the economic linear MPC control problem and guarantees feasibility and stability. Finally, six scenarios are performed to show the decrease in computation time in comparison with the classic Dantzig-Wolfe algorithm.

#### General information

State: Published

Organisations: Department of Applied Mathematics and Computer Science , Scientific Computing, Dynamical Systems, Department of Chemical and Biochemical Engineering, Center for Energy Resources Engineering, Centre for IT-Intelligent Energy Systems in Cities

Authors: Standardi, L. (Intern), Poulsen, N. K. (Intern), Jørgensen, J. B. (Intern)

Pages: 2207-2212

Publication date: 2014

#### Host publication information

Title of host publication: Proceedings of the 19th IFAC World Congress 2014

Publisher: International Federation of Automatic Control

Series: I F A C Workshop Series

Volume: 19

Number: 1

ISSN: 1474-6670

Main Research Area: Technical/natural sciences

Conference: 19th World Congress of the International Federation of Automatic Control (IFAC 2014), Cape Town, South Africa, 24/08/2014 - 24/08/2014

DOIs:

10.3182/20140824-6-ZA-1003.02357
