Opsummering

- For visse prædiktioner dominerer strukturelle fejl i hydrologiske modeller, men der findes få effektive måder at kvantificerer dem på
- Metoden er hurtig og effektiv
- Metoden er objektiv og reproducerbar
- Vha. subselektion kan vi genererer modeller som overholder alle input data -> geologiske, geofysiske og hydrologiske
- Metoden er generisk i forhold til geofysisk input
- Vores prædiktion er i overensstemmelse med vores referencemodel
