Poster Title	All Polymer Lab-on-a-chip System for Virus Detection in Water
Abstract (300 words approx.)	<p>Viral contamination in waters intended for human consumption or human contact poses a high health risk and can, in worst-case, lead to viral outbreaks. The waterborne norovirus is a major cause of viral gastroenteritis [1]. Conventional detection methods of norovirus and other enteric viruses rely on microbiological methods like polymerase chain reaction and a variety of sample preparations [2][3]. These methods are time consuming, expensive and require highly trained personnel. Thus, viral surveillance cannot be done continuously and only provide an instant overview of the water quality. In the project we are targeting three viruses: norovirus, rotavirus, and hepatitis A virus. These three viruses are responsible for the highest occurrence of water-borne viral gastroenteritis and hepatitis in humans.</p> <p>We are developing a cost effective detection system for online virus surveillance of water bodies. The detection is based on differential impedance measurements between a reference electrode and an electrode functionalized with a bio-recognition element. The bio-recognition element is an aptamer specific to the target virus. We have previously shown very low detection limits with influenza virus as proof of concept of the technology [4]. The electrode material is the intrinsic conducting polymer PEDOT:PSS screen-printed on TOPAS for easy up scaling of production.</p> <p>Here we present the fabrication and design of our virus sensor as well as initial results. We also propose a detection scheme with turnover times as low as a few hours, which proves a tremendous advantage over current methods.</p> <p>[1] Teunis, P. F. M et al., (2008). Posters should be sized A0 (841mm x 1189mm) in portrait orientation.

We must receive the abstract on or before 2nd October 2015*. **Abstracts received after this time may not be accepted so please submit your abstract at your earliest opportunity.**

Global Engage will provide boards and fixings. Delegates are responsible for bringing the copy of their poster to be presented. If you wish a pdf copy of your poster to be distributed after the meeting to all attendees, please send the file to scott@globalengage.co.uk

*Please note – Global Engage reserves the right to change the date for submission without notice if all available poster spaces are filled prior to 2nd October 2015.
