

Benchmark and combined velocity-space tomography of fast-ion D-alpha spectroscopy and collective Thomson scattering measurements - DTU Orbit (08/11/2017)

Benchmark and combined velocity-space tomography of fast-ion D-alpha spectroscopy and collective Thomson scattering measurements

We demonstrate the combination of fast-ion D-alpha spectroscopy (FIDA) and collective Thomson scattering (CTS) measurements to determine a common best estimate of the fastion velocity distribution function by velocity-space tomography. We further demonstrate a benchmark of FIDA tomography and CTS measurements without using a numerical simulation as common reference. Combined velocity-space tomographies from FIDA and CTS measurements confirm that sawtooth crashes reduce the fast-ion phase-space densities in the plasma center and affect ions with pitches close to one more strongly than those with pitches close to zero.

General information

State: Published

Organisations: Department of Physics, Plasma Physics and Fusion Energy, Max Planck Institute for Plasma Physics

Authors: Jacobsen, A. S. (Intern), Salewski, M. (Intern), Geiger, B. (Ekstern), Korsholm, S. B. (Intern), Leipold, F. (Intern), Nielsen, S. K. (Intern), Rasmussen, J. (Intern), Pedersen, M. S. (Intern), Weiland, M. (Ekstern)

Number of pages: 5

Publication date: 2016

Main Research Area: Technical/natural sciences

Publication information

Journal: Plasma Physics and Controlled Fusion

Volume: 58

Issue number: 4

Article number: 042002

ISSN (Print): 0741-3335
