

## Auxiliary Deep Generative Models - DTU Orbit (08/11/2017)

### Auxiliary Deep Generative Models

Deep generative models parameterized by neural networks have recently achieved state-of-the-art performance in unsupervised and semi-supervised learning. We extend deep generative models with auxiliary variables which improves the variational approximation. The auxiliary variables leave the generative model unchanged but make the variational distribution more expressive. Inspired by the structure of the auxiliary variable we also propose a model with two stochastic layers and skip connections. Our findings suggest that more expressive and properly specified deep generative models converge faster with better results. We show state-of-the-art performance within semi-supervised learning on MNIST (0.96%), SVHN (16.61%) and NORB (9.40%) datasets.

### General information

State: Published

Organisations: Department of Applied Mathematics and Computer Science , Cognitive Systems, University of Copenhagen

Authors: Maaløe, L. (Intern), Sønderby, C. K. (Ekstern), Sønderby, S. K. (Ekstern), Winther, O. (Intern)

Number of pages: 9

Publication date: 2016

### Host publication information

Title of host publication: Proceedings of the 33rd International Conference on Machine Learning

Series: JMLR: Workshop and Conference Proceedings

Volume: 48

ISSN: 1938-7228

Main Research Area: Technical/natural sciences

Conference: 33rd International Conference on Machine Learning (ICML 2016), New York, United States, 19/06/2016 - 19/06/2016
