

Generalization of first-principles thermodynamic model: Application to hexagonal close-packed ϵ -Fe₃N - DTU Orbit (08/11/2017)

Generalization of first-principles thermodynamic model: Application to hexagonal close-packed ϵ -Fe₃N

A complete first-principles thermodynamic model was developed and applied to hexagonal close-packed structure ϵ -Fe₃N. The electronic structure was calculated using density functional theory and the quasiharmonic phonon approximation to determine macroscopic thermodynamic properties at finite temperatures was generalized in terms of the partition function for any lattice of interest. Specially, thermal expansion of the hexagonal close-packed ϵ phase with two independent lattice parameters was studied by means of the present model and first-principles phonon calculations. The present predictions of thermal expansion of ϵ -Fe₃N are in good agreement with experimental data.

General information

State: Published

Organisations: Department of Mechanical Engineering, Materials and Surface Engineering, Pennsylvania State University

Authors: Bakkedal, M. B. (Intern), Shang, S. L. (Ekstern), Liu, Z. (Ekstern), Somers, M. A. J. (Intern)

Pages: 83-89

Publication date: 2016

Main Research Area: Technical/natural sciences

Publication information

Journal: Computational Materials Science

Volume: 117
