

## Hybrid surface structures for efficiency enhancement of fluorescent SiC for white LED application - DTU Orbit (09/11/2017)

### Hybrid surface structures for efficiency enhancement of fluorescent SiC for white LED application

Hybrid structures contain structures in both micro- and nano-meter scale have been fabricated on fluorescent SiC by applying a fast fabrication method. Luminescence efficiency of f-SiC was enhanced significantly compared with normal nanostructures.

#### General information

State: Published

Organisations: Department of Photonics Engineering, Diode Lasers and LED Systems, Centre of Excellence for Silicon Photonics for Optical Communications, Linköping University

Authors: Ou, Y. (Intern), Xiong, M. (Intern), Lu, W. (Intern), Fadil, A. (Intern), Jokubavicius, V. (Ekstern), Syväjärvi, M. (Ekstern), Petersen, P. M. (Intern), Ou, H. (Intern)

Number of pages: 1

Publication date: 2016

Event: Paper presented at 4th International workshop on LEDs and solar applications, Nagoya, Japan.

Main Research Area: Technical/natural sciences

#### Bibliographical note

Invited talk at '4th International workshop on LEDs and solar applications', held at Meijo University, Nagoya, Japan, Mar.30-31, 2016
