

Investigations of thin p-GaN light-emitting diodes - DTU Orbit (08/11/2017)

Investigations of thin p-GaN light-emitting diodes

We investigate device performance of InGaN light-emitting diodes with a 30-nm p-GaN layer. The metallization used to separate the p-contact from plasmonic metals, reveals limitations on current spreading which reduces surface plasmonic enhancement.

General information

State: Published

Organisations: Department of Photonics Engineering, Diode Lasers and LED Systems, Centre of Excellence for Silicon Photonics for Optical Communications, Tokyo University of Science

Authors: Fadil, A. (Intern), Ou, Y. (Intern), Iida, D. (Ekstern), Kopylov, O. (Intern), Ou, H. (Intern)

Number of pages: 2

Publication date: 2016

Host publication information

Title of host publication: CLEO: Science and Innovations 2016

Publisher: Optical Society of America OSA

ISBN (Print): 978-1-943580-11-8

Main Research Area: Technical/natural sciences

Conference: Conference on Lasers and Electro-Optics 2016, San Jose, California, United States, 05/06/2016 - 05/06/2016

DOIs:

10.1364/CLEO_SI.2016.STu3R.6

Bibliographical note

From the session: UV and Visible Optoelectronics (STu3R)

Source: PublicationPreSubmission

Source-ID: 124222851

Publication: Research - peer-review › Article in proceedings – Annual report year: 2016
