

Simulation, design and proof-of-concept of a two-stage continuous hydrothermal flow synthesis reactor for synthesis of functionalized nano-sized inorganic composite materials - DTU Orbit (09/11/2017)

Simulation, design and proof-of-concept of a two-stage continuous hydrothermal flow synthesis reactor for synthesis of functionalized nano-sized inorganic composite materials

Computational fluid dynamics simulations were employed to evaluate several mixer geometries for a novel two-stage continuous hydrothermal flow synthesis reactor. The addition of a second stage holds the promise of allowing the synthesis of functionalized nano-materials as for example core-shell or decorated particles. Based on the simulation results, a reactor system employing a confined jet mixer in the first and a counter-flow mixer in the second stage was designed and built. The two-stage functionality and synthesis capacity is shown on the example of single- and two-stage syntheses of pure and mixed-phase NiO and YSZ particles.

General information

State: Published

Organisations: Department of Energy Conversion and Storage, Mixed Conductors, Imaging and Structural Analysis, Atomic scale modelling and materials

Authors: Zielke, P. (Intern), Xu, Y. (Intern), Simonsen, S. B. (Intern), Norby, P. (Intern), Kiebach, W. (Intern)

Number of pages: 12

Pages: 1-12

Publication date: 2016

Main Research Area: Technical/natural sciences

Publication information

Journal: Journal of Supercritical Fluids

Volume: 117

ISSN (Print): 0896-8446
