

An integrated knowledge-based and optimization tool for the sustainable selection of wastewater treatment process concepts - DTU Orbit (09/11/2017)

An integrated knowledge-based and optimization tool for the sustainable selection of wastewater treatment process concepts

The increasing demand on wastewater treatment plants (WWTPs) has involved an interest in improving the alternative treatment selection process. In this study, an integrated framework including an intelligent knowledge-based system and superstructure-based optimization has been developed and applied to a real case study. Hence, a multi-criteria analysis together with mathematical models is applied to generate a ranked short-list of feasible treatments for three different scenarios. Finally, the uncertainty analysis performed allows for increasing the quality and robustness of the decisions considering variation in influent concentrations. For the case study application, the expert system identifies 5 potential process technologies and, using this input, the superstructure identifies membrane bioreactors as the optimal and robust solution under influent uncertainties and tighter effluent limits. A mutual benefit and synergy is achieved when both tools are integrated because expert knowledge and expertise are considered together with mathematical models to select the most appropriate treatment alternative

General information

State: Published

Organisations: Department of Chemical and Biochemical Engineering, CAPEC-PROCESS, University of Girona, AQUALOGY

Authors: Castillo, A. (Ekstern), Cheali, P. (Intern), Gómez, V. (Ekstern), Comas, J. (Ekstern), Poch, M. (Ekstern), Sin, G. (Intern)

Pages: 177-192

Publication date: 2016

Main Research Area: Technical/natural sciences

Publication information

Journal: Environmental Modelling & Software

Volume: 84

ISSN (Print): 1364-8152
