Abstract. Results of the study of the fauna of Curculionoidea (Coleoptera) in the Central Donbass (Donetsk and Lugansk regions) based on beetles collected by the authors and their colleagues over a thirty-year period at 87 localities are presented. In total, 710 species of weevils from five families have been registered on this territory: Anthribidae – 14 species, Brentidae – 84 species, Attelabidae – 18 species, Curculionidae – 592 species, Nemonychidae – 2 species. The following nine species are recorded for the fauna of the Ukraine for the first time: *Rhyncolus (Rhyncolus) nefarius* Faust, 1885, *Neoprohinus cinnamomeus* (Schultze, 1897), *Orchestes (Orchestes) steppensis* Korotyaev, 2016, *Pseudorchestes circumvistulanus* (Białooki, 1997), *Pholicodes (Pseudopholicodes) albidus* (Boheman, 1840), *Pachycerus madidus* (Olivier, 1807), *Gymnetron niloticum* Kirsch, 1881, *Cimberis attelaboides* (Fabricius, 1787), *Neocoenorrhinus (Neocoenorrhinus) interruptus* (Voss, 1920). In addition, 178 and 78 species are listed for the first time for Donetsk and Lugansk regions, respectively. After our additions, the fauna of Curculionoidea of the Central Donbass can be considered as the richest in the Ukraine. The proportion of invasive species in the fauna of the region is 2.4% (17 species). Invasive species are registered within Anthribidae (1 species, 7.1%), Brentidae (1 species, 1.2%) and Curculionidae (15 species, 2.5%).

Key words: Coleoptera, Curculionoidea, fauna, Donbass.

Материалы к фауне долгоносикообразных жесткокрылых (Coleoptera: Curculionoidea) Центрального Донбасса

Резюме. Приведены результаты обработки коллекционных материалов по долгоносикообразным жесткокрылым (Coleoptera: Curculionoidea) Центрального Донбасса (в пределах Донецкой и Луганской областей), собранных авторами и их коллегами за тридцатилетний период в 87 пунктах. На исследуемой территории зарегистрировано 710 видов из 5 семейств: Anthribidae – 14 видов, Brentidae – 84 вида, Attelabidae – 18 видов, Curculionidae – 592 вида, Nemonychidae – 2 вида. Для фауны Украины впервые приведено 9 видов: *Rhyncolus (Rhyncolus) nefarius* Faust, 1885, *Neoprohinus cinnamomeus* (Schultze, 1897), *Orchestes (Orchestes) steppensis* Korotyaev, 2016, *Pseudorchestes circumvistulanus* (Białooki, 1997), *Pholicodes (Pseudopholicodes) albidus* (Boheman, 1840), *Pachycerus madidus* (Olivier, 1807), *Gymnetron niloticum* Kirsch, 1881, *Cimberis attelaboides* (Fabricius, 1787), *Neocoenorrhinus (Neocoenorrhinus) interruptus* (Voss, 1920). Для Донецкой области впервые указано 178 видов, для Луганской – 78 видов. С учетом наших дополнений фауну Curculionoidea Донбасса можно рассматривать в числе наиболее богатых на Украине. Удельная доля инвазивных видов в фауне региона составляет 2.4% (17 видов), из них Anthribidae – 1 вид (7.1%), Brentidae – 1 вид (1.2%), Curculionidae – 15 видов (2.5%).

Ключевые слова: Coleoptera, Curculionoidea, фауна, Донбасс.

Weevils (Curculionoidea) is the largest superfamily of herbivorous beetles, represented by multi-species complexes almost in all natural terrestrial, near-water, many freshwater ecosystems and anthropogenically transformed ecosystems. In total, 63400 species of Curculionoidea are known in the World fauna [Alonso-Zarazaga et al., 2017]. According to the data for 2018, the fauna of Curculionoidea of the Ukraine is represented by 1453 species, which is equivalent to 25.3% of the European fauna with 5723 species from 364 genera [Yunakov et al., 2018]. The regional faunas of weevils of the country are examined unevenly. Curculionoidea is one of the poorly studied group in the fauna of the Donbass. In general, the Central Donbass is incomparably less studied in comparison with neighboring regions, therefore it is extremely promising for further faunistic research, which will significantly change

our knowledges on the diversity of Coleoptera in the steppe zone of the Ukraine.

Numerous data on weevils of the Donbass are given in local faunistic works, but they don't give a complete picture of the fauna of the region. The only summarized work devoted to the Curculionoidea of the Eastern Donbass (within Rostov Region of Russia) is the paper of Arzanov [1990] with subsequent additions [Arzanov, 2015]. The tasks of our work included the generalization of faunistic data on Curculionoidea of the Central Donbass within the Donetsk and Lugansk administrative regions.

To the present time, only bark beetles (Scolitinae) have been detailed studied [Nikulina et al., 2015; Nikulina, Martynov, 2017] in the Central Donbass. The first attempt to summarize a literature data and numerous materials collected on the territory of the Ukraine was made by a

team of authors [Yunakov et al., 2018]. More or less large number of localities and list of species from the Donbass were presented in that work. At the same time, the mentioned check-list is not comprehensive. We analyzed many materials from our private collections and present below important numerous additions.

Material and methods

Numerous works about weevils of Donetsk and Lugansk regions were published by K.V. Arnoldi, L.V. Arnoldi, B.S. Ilyin, A.A. Silantyev, S.I. Medvedev, M.P. Bozhko, D.S. Shapiro, V.E. Sklyar, A.V. Kharakoz, V.S. Solodovnikova, B.A. Korotyaev, T.V. Kryzhanovskaya, V.Yu. Nazarenko, O.Yu. Moroz, N.N. Yunakov, Yu.G. Arzanov, R. Caldara, S.V. Volovnik and other researchers. The comprehensive review of the literature on Curculionoidea was published by Yunakov et al. [2018]. Therefore, these references are not presented in our work in order to avoid unnecessary citations.

The most part of the material, listed in the paper, is the result of more than thirty years of collection of weevils on the territory of the Central Donbass (Fig. 1).

In addition to the private collections of the authors, we used materials from the museum of the Department of Zoology of the Southern Federal University (Rostov-on-Don, Russia) and the private collection of S. Konovalov (Lugansk Region, "Trekhibzenskaya steppe", the branch of the Lugansk Nature Reserve) and also materials provided to authors by colleagues, specially indicated in the check-list.

We collected adults using traditional methods: manual collection, mowing with an entomological net, light traps, Barber's traps, breeding of adults from plants (seeds, fruits, tree cuts). The material was collected with the maximum coverage of various habitats and host plants. Our special focus was on nature conservation areas in the region as the most representative. Beetles were fixed with ethyl acetate. They are deposited as dry samples and in 96% ethanol.

The main part of the material was identified by Yu.G. Arzanov, the family Anthribidae and the subfamily Scolytinae by T.V. Nikulina and V.V. Martynov.

The following abbreviations and designations are used in the text: * – a new record for Donetsk Region; ** – a new record for Lugansk Region; *** – a new record for the Ukraine; DBG – Donetsk Botanical Garden; FR – forest reserve; NNP – national nature park; NR – nature reserve; PA – protected area; RLP – regional landscape park; st. – railway station. We use codes DON and LUG for Donetsk and Lugansk regions subsequently, as in the work of Yunakov et al. [2018].

Information about each species is given according to the following unified scheme: records on the basis of literature for Donetsk and/or Lugansk regions (if available), data on geographic localities and dates of collection of materials. Specimens collected by the authors are not indicated in the check-list.

Several alternative classifications of the superfamily Curculionoidea with different number of families are used at the present time. In this work, we use the system of Curculionoidea according to Alonso-Zarazaga et al. [2017].

Records. DON, LUG [Nikulina et al., 2015: 38].

Scolytus mali (Bechstein, 1805)

Records. DON, LUG [Nikulina et al., 2015: 39].

Scolytus multistriatus (Marsham, 1802)

Records. DON, LUG [Nikulina et al., 2015: 39].

Scolytus pygmaeus (Fabricius, 1787)

Records. DON, LUG [Nikulina et al., 2015: 40].

Scolytus ratzeburgi E. W. Janson, 1856

Records. DON, LUG [Nikulina et al., 2015: 41].

Scolytus rugulosus (P.W.J. Mueller, 1818)

Records. DON, LUG [Nikulina et al., 2015: 41].

Scolytus scolytus (Fabricius, 1775)

Records. DON, LUG [Nikulina et al., 2015: 41].

Scolytus sulcifrons Rey, 1892

Records. DON, LUG [Nikulina et al., 2015: 42].

Tribe Xyleborini

Anisandrus dispar (Fabricius, 1792)

Records. DON, LUG [Nikulina et al., 2015: 42].

***Anisandrus maiche* (Kurentsov, 1941)

Records. DON [Nikulina et al., 2015: 43].

Localities. Lugansk Region. Slavyanoserbsk Distr.: Trekhizbenka, light trap, 13.07.2010 (S. Kononov).

Xyleborinus attenuatus (Blandford, 1894)

Records. DON, LUG [Nikulina et al., 2015: 43].

Xyleborinus saxesenii (Ratzeburg, 1837)

Records. DON, LUG [Nikulina et al., 2015: 44].

***Xyleborus dryographus* (Ratzeburg, 1837)

Records. DON [Nikulina et al., 2015: 45].

Localities. Lugansk Region. Slavyanoserbsk Distr.: Trekhizbenka, light trap, 31.05.2010 (S. Kononov).

Xyleborus eurygraphus (Ratzeburg, 1837)

Records. DON [Nikulina et al., 2015: 45].

Xyleborus monographus (Fabricius, 1792)

Records. DON, LUG [Nikulina et al., 2015: 45].

Tribe Xyloterini

Trypodendron lineatum (Olivier, 1795)

Records. DON [Nikulina et al., 2015: 46].

Trypodendron signatum (Fabricius, 1792)

Records. DON [Nikulina et al., 2015: 46].

Family Nemomychidae

Subfamily Nemomychinae

Nemonyx lepturoides (Fabricius, 1801)

Records. DON, LUG [Yunakov et al., 2018: 440].

****Cimberis attelaboides* (Fabricius, 1787)

Localities. Donetsk Region. Slavyansk Distr.: Bogorodichnoe, 5.06.2010.

Discussion

Nine species are recorded for the fauna of the Ukraine for the first time: *Rhyncolus (Rhyncolus) nefarius* Faust, 1885, *Neoprohinus cinnamomeus* (Schultze, 1897), *Orchestes (Orchestes) steppensis* Korotyayev, 2016, *Pseudorchestes circumvistulanus* (Białooki, 1997), *Pholicodes (Pseudopholicodes) albidus* (Boheman, 1840), *Pachycerus madidus* (Olivier, 1807), *Gymnetron niloticum* Kirsch, 1881, *Cimberis attelaboides* (Fabricius, 1787), *Neocoenorrhinus (Neocoenorrhinus) interruptus* (Voss, 1920). For Donetsk and Lugansk regions, 179 and 78 species are listed, respectively.

The analysis of the taxonomic structure of the superfamily Curculionoidea by administrative regions demonstrates a high degree of similarity in the faunal volume (number of taxa) of the most represented families (Table 1). At the same time, comparison of check-lists of weevils of Donetsk and Lugansk regions shows significant differences in their species composition. This may be due to a different degree of study of its faunas, because physical and geographical barriers between these territories are absent.

After our research, the fauna of Curculionoidea of the Donbass is one of the most diverse among regional faunas of the Ukraine and Russia. It is comparable to the faunas of the Carpathians and Crimea [Yunakov et al., 2018] in terms of the number of registered weevil species and is somewhat richer than the fauna of Rostov Region of Russia [Arzanov, 1990, 2015].

We found the extremely low invasive species number in the region's fauna: 17 species (2.4%) while the regional flora comprises 447 invasive species (21.5%) [Ostapko et al., 2017]. Invasive species were registered within three families: Anthribidae, one species (7.1%); Brentidae, one species (1.2%); Curculionidae, 15 species (2.5%). We expect a significant increase in the number of invasive phytophages, because Curculionoidea are characterized by a high trophic specialization in certain plant species or genera. Therefore, further monitoring studies of Donbass are very important.

Table 1. Taxonomic composition of Curculionoidea of the Western Donbass.
Таблица 1. Таксономический состав фауны долгоносикообразных жесткокрылых Донбасса.

Family Семейство	Donetsk Region Донецкая область		Lugansk Region Луганская область		Donbass Донбасс	
	Genera Роды	Species Виды	Genera Роды	Species Виды	Genera Роды	Species Виды
Anthribidae	8	13	8	9	9	14
Brentidae	31	66	30	62	35	84
Attelabidae	9	14	8	15	10	18
Curculionidae	170	547	159	456	182	592
Nemonychidae	2	2	1	1	2	2
In total / Итого	220	642	206	543	238	710
