

# Digital Signal Processing

Fourth Edition

**John G. Proakis**

*Department of Electrical and Computer Engineering  
Northeastern University  
Boston, Massachusetts*

**Dimitris G. Manolakis**

*MIT Lincoln Laboratory  
Lexington, Massachusetts*

Pearson Education International

# Contents

	<b>Preface</b>	<b>xvii</b>		
<b>1</b>	<b>Introduction</b>	<b>1</b>		
1.1	Signals, Systems, and Signal Processing	2	3.3	Rational z-Transforms 165
1.2	Classification of Signals	6	3.4	Inversion of the z-Transform 175
1.3	The Concept of Frequency in Continuous-Time and Discrete-Time Signals	12	3.5	Analysis of Linear Time-Invariant Systems in the z-Domain 189
1.4	Analog-to-Digital and Digital-to-Analog Conversion	19	3.6	Summary and References Problems 200 202
1.5	Summary and References Problems	37 37	<b>4</b>	<b>Frequency Analysis of Signals 209</b>
<b>2</b>	<b>Discrete-Time Signals and Systems</b>	<b>40</b>	4.1	Frequency Analysis of Continuous-Time Signals 210
2.1	Discrete-Time Signals	41	4.2	Frequency Analysis of Discrete-Time Signals 226
2.2	Discrete-Time Systems	52	4.3	Frequency-Domain and Time-Domain Signal Properties 253
2.3	Analysis of Discrete-Time Linear Time-Invariant Systems	68	4.4	Properties of the Fourier Transform for Discrete-Time Signals 255
2.4	Discrete-Time Systems Described by Difference Equations	88	4.5	Summary and References Problems 275 276
2.5	Implementation of Discrete-Time Systems	108	<b>5</b>	<b>Frequency-Domain Analysis of LTI Systems 281</b>
2.6	Correlation of Discrete-Time Signals	115	5.1	Frequency-Domain Characteristics of Linear Time-Invariant Systems 281
2.7	Summary and References Problems	127 128	5.2	Frequency Response of LTI Systems 295
<b>3</b>	<b>The z-Transform and Its Application to the Analysis of LTI Systems</b>	<b>141</b>	5.3	Linear Time-Invariant Systems as Frequency-Selective Filters 302
3.1	The z-Transform	141	5.4	Inverse Systems and Deconvolution 326
3.2	Properties of the z-Transform	151	5.5	Summary and References Problems 339 340

<b>6</b>	<b>Sampling and Reconstruction of Signals</b>	<b>354</b>	8.3	A Linear Filtering Approach to Computation of the DFT	507
6.1	Ideal Sampling and Reconstruction of Continuous-Time Signals	354	8.4	Quantization Effects in the Computation of the DFT	514
6.2	Discrete-Time Processing of Continuous-Time Signals	365	8.5	Summary and References Problems	520 521
6.3	Analog-to-Digital and Digital-to-Analog Converters	371	<b>9</b>	<b>Implementation of Discrete-Time Systems</b>	<b>525</b>
6.4	Sampling and Reconstruction of Continuous-Time Bandpass Signals	380	9.1	Structures for the Realization of Discrete-Time Systems	525
6.5	Sampling of Discrete-Time Signals	397	9.2	Structures for FIR Systems	527
6.6	Oversampling A/D and D/A Converters	403	9.3	Structures for IIR Systems	544
6.7	Summary and References Problems	410 410	9.4	Representation of Numbers	563
<b>7</b>	<b>The Discrete Fourier Transform: Its Properties and Applications</b>	<b>416</b>	9.5	Quantization of Filter Coefficients	575
7.1	Frequency-Domain Sampling: The Discrete Fourier Transform	416	9.6	Round-Off Effects in Digital Filters	586
7.2	Properties of the DFT	431	9.7	Summary and References Problems	602 603
7.3	Linear Filtering Methods Based on the DFT	447	<b>10</b>	<b>Design of Digital Filters</b>	<b>612</b>
7.4	Frequency Analysis of Signals Using the DFT	455	10.1	General Considerations	612
7.5	The Discrete Cosine Transform	462	10.2	Design of FIR Filters	618
7.6	Summary and References Problems	468 469	10.3	Design of IIR Filters From Analog Filters	659
<b>8</b>	<b>Efficient Computation of the DFT: Fast Fourier Transform Algorithms</b>	<b>476</b>	10.4	Frequency Transformations	688
8.1	Efficient Computation of the DFT: FFT Algorithms	476	10.5	Summary and References Problems	692 693
8.2	Applications of FFT Algorithms	503	<b>11</b>	<b>Multirate Digital Signal Processing</b>	<b>704</b>
			11.1	Introduction	705
			11.2	Decimation by a Factor $D$	709
			11.3	Interpolation by a Factor $I$	714
			11.4	Sampling Rate Conversion by a Rational Factor $I/D$	716
			11.5	Implementation of Sampling Rate Conversion	720

11.6	Multistage Implementation of Sampling Rate Conversion	729	12.7	Wiener Filters for Filtering and Prediction	814
11.7	Sampling Rate Conversion of Bandpass Signals	733	12.8	Summary and References Problems	824 825
11.8	Sampling Rate Conversion by an Arbitrary Factor	735	<b>13</b>	<b>Adaptive Filters</b>	<b>830</b>
11.9	Applications of Multirate Signal Processing	738	13.1	Applications of Adaptive Filters	830
11.10	Digital Filter Banks	744	13.2	Adaptive Direct-Form FIR Filters—The LMS Algorithm	852
11.11	Two-Channel Quadrature Mirror Filter Bank	752	13.3	Adaptive Direct-Form Filters—RLS Algorithms	866
11.12	<i>M</i> -Channel QMF Bank	761	13.4	Adaptive Lattice-Ladder Filters	877
11.13	Summary and References Problems	767 767	13.5	Summary and References Problems	904 905
<b>12</b>	<b>Linear Prediction and Optimum Linear Filters</b>	<b>774</b>	<b>A</b>	<b>Random Number Generators</b>	<b>909</b>
12.1	Random Signals, Correlation Functions, and Power Spectra	774	<b>B</b>	<b>Tables of Transition Coefficients for the Design of Linear-Phase FIR Filters</b>	<b>915</b>
12.2	Innovations Representation of a Stationary Random Process	785		<b>References and Bibliography</b>	<b>921</b>
12.3	Forward and Backward Linear Prediction	789		<b>Answers to Selected Problems</b>	<b>935</b>
12.4	Solution of the Normal Equations	797		<b>Index</b>	<b>943</b>
12.5	Properties of the Linear Prediction-Error Filters	806			
12.6	AR Lattice and ARMA Lattice-Ladder Filters	809
