

CONTENTS

General	1
Personnel	
Administrative and Service	2
Research	3
Research Projects	
I. Microwave and Physical Electronics	
A. Construction of 5 mm. Oxford Type Tube	5
B. Construction of High Power S-band Magnetron	5
C. Magnetron Theory Research	7
D. Oxide Cathode Research	8
E. The Transmission of the Photo-effect in Silicon	11
II. Microwave Physics	
A. Radio Frequency Spectra	
1. Oxygen Absorption Spectra at 5 mm.	14
2. Caesium Hyperfine Structure	15
3. Molecular Beams	16
B. Gas Discharge Research	
1. Low Pressure Discharges	17
2. Microwave Spark Breakdown	19
C. Low Temperature Research	20
D. Ferromagnetism at Microwave Frequencies	22
III. Modern Electronic Techniques Applied to Physics and Engineering	
A. Studies Leading to the Design of a Microwave Accelerator	23
B. Ultrasonics Research Program	24
C. High Speed Oscilloscope and Magnetron Moding	26
D. Electronic Instruments for Measuring High Speed Particles in Nuclear Experiments	29
E. Measurement and Control of De-ionization Time in Thyratrons	31
F. Experimentation in Photoelectric Spectrophotometry	33
G. Liquid Filled Chamber to be Used in the Photographing of Very High Energy Ionizing Particles	36
H. Synchrotron Project	37
IV. Communications and Related Projects	
A. Noise Interference and Distortion in Pulse Modulation	39
B. Stabilized Oscillator Problems	
1. Modulation and Stabilization	41
2. D.C. Amplifier Problems	42
C. Circuit Problems	
1. Study of Waveguides With Dissipative Walls	42
2. The Broadbanding of Microwave Networks	43
3. The Extension of the Methods and Procedures of the Circuit Synthesis to Active Networks Involving Vacuum Tubes	43
4. Transients in Waveguides	43
5. Miscellaneous Waveguide Problems	44
6. Impedance of Magic Tees	44
V. Aids to Computation	
A. Shaft Position Indicator, Reversible Counters	46
B. Electro-Mechanical Computers	55
