

**ADVANCES IN  
QUANTUM CHEMISTRY**

**RESPONSE THEORY AND MOLECULAR PROPERTIES**

**A tribute to Jan Linderberg and Poul Jørgensen**

EDITORS

**JOHN R. SABIN**

QUANTUM THEORY PROJECT  
UNIVERSITY OF FLORIDA  
GAINESVILLE, FLORIDA

**ERKKI BRÄNDAS**

DEPARTMENT OF QUANTUM CHEMISTRY  
UPPSALA UNIVERSITY  
UPPSALA, SWEDEN

FOUNDING EDITOR

**PER-OLOV LÖWDIN**

1916–2000

GUEST EDITOR

**HANS JØRGEN Aa. JENSEN**

DEPARTMENT OF CHEMISTRY  
UNIVERSITY OF SOUTHERN DENMARK  
ODENSE M, DENMARK

**VOLUME 50**

## Contents

<i>Contributors</i>	ix
<i>Preface</i>	xi
<b>Jan Linderberg, Scientist, Teacher, Friend</b>	xiii
Yngve Öhrn	
1. Introduction	xiii
2. The scientist	xv
3. The teacher	xvi
4. The friend and travel companion	xviii
Acknowledgements	xix
<b>Poul Jørgensen and His Science</b>	xxi
Jens Oddershede	
1. Introduction	xxi
2. The career	xxiii
3. Scientific milestones	xxiii
4. Concluding remarks	xxviii
Acknowledgements	xxix
<b>Multi-Photon Absorption of Molecules</b>	1
Peter Cronstrand, Yi Luo and Hans Ågren	
1. Introduction	1
2. Multi-photon cross-sections	2
3. Response functions	6
4. Few-states models	9
5. Validity of few-states models	10
6. Three-dimensional systems	13
7. Comparison between DFT and <i>ab initio</i> results	16
8. Conclusion	20
Acknowledgements	20
References	20
<b>Two-Bond Spin–Spin Coupling Constants (<math>{}^{2h}J_{X-Y}</math>) Across <i>X–H–Y</i> Hydrogen Bonds: Some Fundamental Questions</b>	23
Janet E. Del Bene and José Elguero	
1. Introduction	23

2. Methods	24
3. Results and discussion	24
4. Conclusions	33
Acknowledgements	33
References	33
<b>Structure Optimizations for Excited States with Correlated Second-Order Methods: CC2 and ADC(2)</b>	<b>37</b>
Christof Hättig	
1. Introduction	37
2. Relation between CC2 and the CIS( $D_{\infty}$ ) and ADC(2) models	39
3. Intersections of excited states in coupled-cluster response theory	40
4. Implementation of analytic excited state gradients for ADC(2) and CIS( $D_{\infty}$ )	43
5. Performance of correlated second-order methods for excited state structures and vibrational frequencies	48
6. Summary and conclusions	53
Acknowledgements	57
Appendix A	57
References	59
<b>Angular Symmetry and Hylleraas Coordinates in Four-Body Problems</b>	<b>61</b>
Frank E. Harris	
1. Introduction	61
2. Wavefunctions	63
3. Kinetic energy	65
4. Angular matrix elements	68
5. Rotational invariants	72
6. Radial integration	72
7. Conclusion	73
Acknowledgements	73
Appendix A: Angular momentum formulas	73
References	74
<b>The Rotational <math>g</math> Tensor as a Benchmark for <i>Ab Initio</i> Molecular Property Calculations</b>	<b>77</b>
Chris E. Mohn, David J.D. Wilson, Ola B. Lutnæs, Trygve Helgaker and Kenneth Ruud	
1. Introduction	77
2. Theory	79
3. Computational details	81
4. Results	82
5. Conclusions	88
Acknowledgements	89
References	89

<b>Linear Response Properties Required to Simulate Vibrational Spectra of Biomolecules in Various Media: (R)-Phenylloxirane (A Comparative Theoretical and Spectroscopic Vibrational Study)</b>	91
K.J. Jalkanen, V. Würtz Jürgensen and I.M. Degtyarenko	
1. Introduction	92
2. Methods and materials	93
3. Results	95
4. Discussion	119
5. Conclusions and future perspectives	119
Acknowledgements	120
References	121
<b>A Theoretical Model to Calculate Fundamental Physical Parameters for Molecule-Particle Interactions</b>	125
Allan Gross and Kurt V. Mikkelsen	
1. Introduction	125
2. Sticking coefficient model	130
3. Tests of the quantum-statistical model	135
4. Discussion of the results	139
5. Conclusion	140
Acknowledgements	141
References	141
<b>Birefringences: A Challenge for Both Theory and Experiment</b>	143
Antonio Rizzo and Sonia Coriani	
1. Introduction	144
2. Definitions and general aspects	145
3. General remarks on computation	153
4. Review of results: examples	158
Acknowledgements	179
References	180
<b>The <i>Ab Initio</i> Calculation of Optical Rotation and Electronic Circular Dichroism</b>	185
Magdalena Pecul and Kenneth Ruud	
1. Introduction	186
2. Theory of optical activity	186
3. Calculations of optical rotation and electronic circular dichroism	198
4. Concluding remarks and outlook	209
Acknowledgements	210
References	210
<b>Response of a Molecule to Adding or Removing an Electron</b>	213
Jack Simons	
1. Introduction	214
2. Basics of EOM theory	215

3. Practical implementations of EOM theories for EAs and IPs	220
4. Some special cases	226
5. Summary	229
Acknowledgements	230
References	230
<b>A Non-Iterative Numerical Solver of Poisson and Helmholtz Equations Using High-Order Finite-Element Functions</b>	235
Raphael J.F. Berger and Dage Sundholm	
1. Introduction	235
2. Theory	237
3. Boundary conditions	241
4. The algorithms	242
5. Summary	244
6. Discussion	245
Acknowledgements	246
References	246
<b>Some Trends in Relativistic and Electron Correlation Effects in Electric Properties of Small Molecules</b>	249
M. Urban and V. Kellö	
1. Introduction	249
2. Basic methods for correlated scalar relativistic calculations	251
3. Examples of trends for selected atomic and molecular properties	252
4. Summary	266
Acknowledgements	267
References	267
<b>Restricted Density Functional Response Theory for Open-Shell Systems</b>	271
Zilvinas Rinkevicius, Lyudmyla Telyatnyk and Olav Vahtras	
1. Introduction	271
2. Theory	273
3. Sample applications	278
4. Summary	286
Acknowledgements	287
References	287
<b>The Multiconfigurational Spin-Tensor Electron Propagator Method (MCSTEP)</b>	289
Danny L. Yeager	
1. Introduction	290
2. Theory	291
3. Some recent calculational examples with MCSTEP and EPCASPT2	298
4. Summary and conclusions	310
Acknowledgements	310
References	311
<i>Subject Index</i>	315
