

## TABLE OF CONTENTS

Publications and Reports	v
Personnel	vii
Introduction	ix
I. Physical Electronics	1
A. Electron-Emission Problems	1
1. Thermionic Work Function and Conductivity of Oxide-Coated Cathodes	1
2. Thermionic Emission from Ultrafine-Grain Oxide-Coated Filaments	1
3. Deterioration of Oxide-Coated Cathodes under Low Duty-Factor Operation	2
4. Purified Standard Diodes	3
5. Determination of the Field-Emission Properties of Single Tungsten Crystals by a Photometric Method	6
6. Photoelectric Emission	7
7. Effect of Impurity Surface States on the Photoelectric Threshold in Semiconductors	7
B. Studies with Gaseous Discharge	8
1. Investigation of Low-Pressure Mercury Arcs	8
C. Experimental Techniques	9
1. Spectral Emissivity of Tungsten	9
2. Ionization Gauge Study	9
3. An Electronic Circuit for the Operation of an Ionization Gauge	10
II. Microwave Gaseous Discharges	11
A. 100-Megacycle Breakdown	11
B. Positive Ion Analysis	14
III. Solid State Physics	15
A. Quantum Theory of Antiferromagnetism	15
B. Soft X-Ray Vacuum Spectrograph	15
C. Paramagnetic Resonance	16
D. The Theory of the Transport Phenomena in Metals	17
IV. Low-Temperature Physics	18
A. Helium Liquefiers	18
B. Measurement of Pressure-Variation of Second Sound Velocity in Liquid Helium II	18
C. Investigation of Dipole Interaction in Crystals	19
D. Cooling Liquid Helium by Adiabatic Demagnetization	19
E. Measurement of Magnetic Susceptibility	20
F. Magnetic Cooling	21
V. Radio-Frequency Spectroscopy	22
A. Molecular-Beam Research	22
1. The Fourth Atomic-Beam Apparatus	22
B. Nuclear Magnetic Resonance	23
1. Optical Detection of Radio-Frequency Resonance in Excited Atomic States	23
2. Factors Influencing the Positions of Nuclear Magnetic Resonances	25
3. Liquid Nitrogen Magnet	25
4. Simplified Circuit for Nuclear Magnetic Resonance Experiments	26
C. Microwave Spectroscopy	26
1. Intensity Measurements and Line Shapes of Formaldehyde	26
2. Precision Stark Measurements	28
3. Sulphur	30

VI.	Tube Research and Development	31
	A. Magnetron Development	31
	1. High-Power 10.7-Cm Magnetron	31
	2. Magnetron Research	32
	3. Cathode Research	34
	B. Microwave Tubes	34
	1. Microwave Noise Studies	34
	2. Debunching Forces in a Beam of Finite Diameter	40
	3. Electron Beam Measuring Technique	41
	4. Dense Electron Beams in Axial Magnetic Fields	42
	C. The Generation of Millimeter and Infra-Red Radiation by Accelerated Electrons	44
VII.	Communications Research	45
	A. Multipath Transmission	45
	1. Speech and Music	45
	a. Field tests	45
	b. New receiver	45
	c. Three-path propagation interference	45
	2. Television	46
	B. Statistical Theory of Communication	47
	1. Analogue Electronic Correlator	47
	2. Digital Electronic Correlator	47
	3. Detection of Small Signals in Noise	47
	4. Experimental Determination of System Functions by the Method of Correlation	51
	5. Optimum Linear System Design Criteria	51
	6. Application of Wiener's Techniques in Transient Synthesis	52
	7. Techniques of Optimum Filter Design	53
	8. Amplitude and Conditional Probability Distributions of a Quantized Time Function	54
	9. Felix (Sensory Replacement)	54
	10. Speech Studies	55
	a. A short-time correlator for speech waves	55
	b. The effect of syllabic rate on speech intelligibility	56
	11. Pulse Coding of Picture Signals	59
	12. Pulse-Code Magnetic Recorder	59
	13. Twin-Track Recorder for Slow Phenomena	59
	C. Transient Problems	62
	1. Transient Theories	62
	D. Active Networks	69
	1. The Synthesis of Servomechanisms	69
	E. Locking Phenomena in Microwave Oscillators	71
	1. The Mutual Synchronization of Oscillators	71
	2. Effects of Starting Transients on Synchronized Behavior	71
	3. A Suppressed-Carrier AM System	72
VIII.	Air Navigation	73
IX.	Miscellaneous Problems	76
	A. Electronic Differential Analyzer	76
	B. Analog Devices for Network Problems	77
	1. Automatic Impedance-Function Analyzer	77
	2. The Dipole Potential Analog	77
	3. The Electronic Isograph	79
	4. A Panoramic Display for the Electronic Isograph	79
	5. Electronic Commutator	80
	C. Offset Waveguide Junction	81
