Automating with STEP 7 in STL and SCL

Programmable Controllers SIMATIC S7-300/400

by Hans Berger

3rd revised edition, 2005

Publicis Corporate Publishing

Table of Contents

Introduction 21

1 SIMATIC S7-300/400 Programmable Controller 22

1.1 Structure of the Programmable Controller 22

1.1.1 Components 22
1.1.2 S7-300 Station 22
1.1.3 S7-400 Station 24
1.1.4 Fault-Tolerant SIMATIC 25
1.1.5 Safety-Relevant SIMATIC 26
1.1.6 CPU Memory Areas 27

1.2 Distributed I/O 31

1.2.1 DP Master System 31
1.2.2 DP Master 32
1.2.3 DP Slaves 32
1.2.4 Further Network Components . . . 33
1.2.5 Connection to PROFIBUS PA . . 34
1.2.6 Connection to AS-Interface 34
1.2.7 Connection to a Serial Interface . . 35

1.3 Communications 36

1.3.1 Introduction 36
1.3.2 Subnets 37
1.3.3 Communications Services 39
1.3.4 Connections 40

1.4 Module Addresses 41

1.4.1 Signal Path 41
1.4.2 Slot Address 42
1.4.3 Module Start Address 42
1.4.4 Diagnostics Address 43
1.4.5 Addresses for Bus Nodes 43

1.5 Address Areas 43

1.5.1 User Data Area 43
1.5.2 Process Image 44
1.5.3 Consistent User Data 45
1.5.4 Bit Memories 46

2 STEP 7 Programming Software . 47

2.1 STEP 7 Basic Package 47

2.1.1 Installation 47
2.1.2 Automation License Manager . . . 47
2.1.3 SIMATIC Manager 48
2.1.4 Projects and Libraries 49
2.1.5 Multiprojects 51
2.1.6 Online Help 52

2.2 Editing Projects 52

2.2.1 Creating Projects 52
2.2.2 Managing, Rearranging and Archiving 54
2.2.3 Project Versions 54
2.2.4 Creating and Editing Multiprojects . 55

2.3 Configuring Stations 56

2.3.1 Arranging Modules 58
2.3.2 Addressing Modules 58
2.3.3 Parameterizing Modules 58
2.3.4 Networking Modules with MPI . . 59
2.3.5 Monitoring and Modifying Modules 59

2.4 Configuring the Network 59

2.4.1 Configuring the Network View . . . 60
2.4.2 Configuring a DP Master System with the Network Configuration . . 61
2.4.3 Configuring Connections 62
2.4.4 Network Transitions 65
2.4.5 Loading the Connection Data . . . 66
2.4.6 Adjusting Projects in the Multiproject 66

2.5 Creating the S7 Program 68

2.5.1 Introduction 68
2.5.2 Symbol Table 68
2.5.3 STL Program Editor 70
2.5.4 SCL Program Editor 74
2.5.5 Rewiring 77
2.5.6 Address Priority 78
2.5.7 Reference Data 79

2.5.8 Multilingual Comments and Display Texts 80
2.6 Online Mode 81
2.6.1 Connecting a PLC 81
2.6.2 Protecting the User Program. . . . 82
2.6.3 CPU Information. 83
2.6.4 Loading the User Program into the CPU 83
2.6.5 Block Handling 84
2.7 Testing the Program 87
2.7.1 Diagnosing the Hardware 87
2.7.2 Determining the Cause of a STOP. 87
2.7.3 Monitoring and Modifying Variables. 87
2.7.4 Forcing Variables 89
2.7.5 Enabling Peripheral Outputs. . . . 90
2.7.6 STL Program Status 91
2.7.7 Monitoring and Controlling Data Addresses 93
2.7.8 Debugging SCL Programs. 93

3 SIMATIC S7 Program 96

3.1 Program Processing 96
3.1.1 Program Processing Methods . . . 96
3.1.2 Priority Classes 97
3.1.3 Specifications for Program Processing 98
3.2 Blocks 100
3.2.1 Block Types 100
3.2.2 Block Structure 101
3.2.3 Block Properties 103
3.2.4 Block Interface. 105
3.3 Addressing Variables 107
3.3.1 Absolute Addressing of Variables 107
3.3.2 Indirect Addressing 108
3.3.3 Symbolic Addressing of Variables 108
3.4 Programming Code Blocks with STL. 110
3.4.1 Structure of an STL Statement. . 110
3.4.2 Programming STL Code Blocks Incrementally 110
3.4.3 Overview Window. 111
3.4.4 Programming Networks 112
3.4.5 Source-File-Oriented Programming of STL Code Blocks 113
3.5 Programming Code Blocks with SCL 117
3.5.1 Structure of an SCL Statement . . 117
3.5.2 Programming SCL Code Blocks . 117
3.6 Programming Data Blocks 121
3.6.1 Programming Data Blocks Incrementally 121
3.6.2 Source-Oriented Data Block Programming 124
3.7 Variables and Constants 126
3.7.1 General Remarks Concerning Variables 126
3.7.2 General Remarks Regarding Data Types 126
3.7.3 Elementary Data Types 127
3.7.4 Complex Data Types 127
3.7.5 Parameter Types 130

Basic Functions 131

4 Binary Logic Operations 132

4.1 Processing a Binary Logic Operation 132
4.2 Elementary Binary Logic Operations. 134
4.2.1 AND Function 135
4.2.2 OR Function 135
4.2.3 Exclusive OR Function 135
4.3 Negating the Result of the Logic Operation. 137
4.4 Compound Binary Logic Operations. 137
4.4.1 Processing Nesting Expressions . 138
4.4.2 Combining AND Functions According to OR 140
4.4.3 Combining OR and Exclusive OR Functions According to AND. . . 140
4.4.4 Combining AND Functions According to Exclusive OR. . . . 140
4.4.5 Combining OR Functions and Exclusive OR Functions 141
4.4.6 Negating Nesting Expressions . . 141

5 Memory Functions. 142

5.1 Assign. 142

5.2 Set and Reset 142
5.3 RS Flipflop Function 144
5.3.1 Memory Functions with Reset Priority. 144
5.3.2 Memory Function with Set Priority. 144
5.3.3 Memory Function in a Binary Logic Operation 144
5.4 Edge Evaluation 145
5.4.1 Positive Edge 146
5.4.2 Negative Edge 146
5.4.3 Testing a Pulse Memory Bit. . . 147
5.4.4 Edge Evaluation in a Binary Logic Operation 147
5.4.5 Binary Scaler 148
5.5 Example of a Conveyor Belt Control System 148

6 Move Functions. 152

6.1 General Remarks on Loading and Transferring Data 152
6.2 Load Functions 154
6.2.1 General Representation of a Load Function 154
6.2.2 Loading the Contents of Memory Locations 154
6.2.3 Loading Constants. 155
6.3 Transfer Functions. 156
6.3.1 General Representation of a Transfer Function 156
6.3.2 Transferring to Various Memory Areas. 156
6.4 Accumulator Functions 157
6.4.1 Direct Transfers Between Accumulators 157
6.5 Exchange Bytes in Accumulator 1. 158
6.6 System Functions for Data Transfer 159
6.6.1 Copying Memory Area 160
6.6.2 Uninterruptible Copying of Variables. 160
6.6.3 Initializing a memory area. . . . 161
6.6.4 Copying STRING Variables . . 161
6.6.5 Reading from Load Memory . . 161
6.6.6 Writing into the Load Memory. . 162

7 Timer Functions. 164

7.1 Programming a Timer 164
7.1.1 Starting a Timer 164
7.1.2 Specifying the Time 165
7.1.3 Resetting a Timer. 166
7.1.4 Enabling a Timer 166
7.1.5 Checking a Timer. 166
7.1.6 Sequence of Timer Instructions . 167
7.1.7 Clock Generator Example 167
7.2 Pulse Timers 168
7.3 Extended Pulse Timers 170
7.4 On-Delay Timers 172
7.5 Retentive On-Delay Timers . . . 174
7.6 Off-Delay Timers. 176
7.7 IEC Timer Functions 178
7.7.1 Pulse Generation SFB 3 TP . . . 178
7.7.2 On Delay SFB 4 TON 179
7.7.3 Off Delay SFB 5 TOF 179

8 Counter Functions 180

8.1 Setting and Resetting Counters. . 180
8.2 Counting 181
8.3 Checking a Counter. 182
8.4 Enabling a Counter 182
8.5 Sequence of Counter Instructions 183
8.6 IEC Counter Functions 184
8.6.1 Up Counter SFB 0 CTU 184
8.6.2 Down Counter SFB 1 CTD. . . . 184
8.6.3 Up-Down Counter SFB 2 CTUD. 185
8.7 Parts Counter Example 185

Digital Functions 189

9 Comparison Functions 190

9.1 General Representation of a Comparison Function. 190
9.2 Description of the Comparison Functions 191
9.3 Comparison Function in a Logic Operation 192

10 Arithmetic Functions 194

10.1 General Representation of an Arithmetic Function 194

10.2 Calculating with Data Type INT. 195

10.3 Calculating with Data Type DINT 196

10.4 Calculating with Data Type REAL 197

10.5 Successive Arithmetic Functions. 198

10.6 Adding Constants to Accumulator 1 199

10.7 Decrementing and Incrementing 199

11 Math Functions 201

11.1 Processing a Math Function . . . 201

11.2 Trigonometric Functions. 202

11.3 Arc Functions 202

11.4 Other Math Functions 202

12 Conversion Functions 204

12.1 Processing a Conversion Function 204

12.2 Converting INT and DINT Numbers 205

12.3 Converting BCD Numbers. . . . 205

12.4 Converting REAL Numbers . . . 206

12.5 Other Conversion Functions . . . 207

13 Shift Functions 209

13.1 Processing a Shift Function . . . 209

13.2 Shifting. 210

13.3 Rotating 212

14 Word Logic 214

14.1 Processing a Word Logic Operation. 214

14.2 Description of the Word Logic Operations 216

Program Flow Control 217

15 Status Bits 218

15.1 Description of the Status Bits. . . 218

15.2 Setting the Status Bits and the Binary Flags. 220

15.3 Evaluating the Status Bit 222

15.4 Using the Binary Result. 224

16 Jump Functions 226

16.1 Programming a Jump Function . . 226

16.2 Unconditional Jump. 227

16.3 Jump Functions with RLO and BR. 227

16.4 Jump Functions with CC0 and CC1 228

16.5 Jump Functions with OV and OS 230

16.6 Jump Distributor 230

16.7 Loop Jump 231

17 Master Control Relay 232

17.1 MCR Dependency 232

17.2 MCR Area. 233

17.3 MCR Zone 233

17.4 Setting and Resetting I/O Bits . . 234

18 Block Functions 236

18.1 Block Functions for Code Blocks. 236

18.1.1 Block Calls: General 237

18.1.2 CALL Call Statement. 237

18.1.3 UC and CC Call Statements . . . 238

18.1.4 Block End Functions 239

18.1.5 Temporary Local Data 239

18.1.6 Static Local Data 242

18.2 Block Functions for Data Blocks . 244

18.2.1 Two Data Block Registers 244

18.2.2 Accessing Data Addresses 245

18.2.3 Open Data Block 247

18.2.4 Exchanging the Data Block Registers 248

18.2.5 Data Block Length and Number . 248

18.2.6 Special Points in Data Addressing 248

18.3 System Functions for Data Blocks 250

18.3.1 Creating a Data Block in the Work Memory 250

18.3.2 Creating a Data Block in the Load Memory 251

18.3.3 Deleting a Data Block 252

18.3.4 Testing a Data Block 252

18.4 Null Operations 252

18.4.1 NOP Statements 252

18.4.2 Program Display Statements . . 253

19 Block Parameters 254

19.1 Block Parameters in General . . 254

19.1.1 Defining the Block Parameters 254

19.1.2 Processing the Block Parameters 254

19.1.3 Declaration of the Block Parameters 255

19.1.4 Declaration of the Function Value 256

19.1.5 Initializing Block Parameters . . 257

19.2 Formal Parameters 257

19.3 Actual Parameters 260

19.4 "Passing On" Block Parameters . 263

19.5 Examples 264

19.5.1 Conveyor Belt Example 264

19.5.2 Parts Counter Example 265

19.5.3 Feed Example 265

Program Processing 269

20 Main Program 270

20.1 Program Organization 270

20.1.1 Program Structure 270

20.1.2 Program Organization 271

20.2 Scan Cycle Control 272

20.2.1 Process Image Updating 272

20.2.2 Scan Cycle Monitoring Time . . 274

20.2.3 Minimum Scan Cycle Time, Background Scanning 275

20.2.4 Response Time 276

20.2.5 Start Information 276

20.3 Program Functions 277

20.3.1 Time 278

20.3.2 Read System Clock 280

20.3.3 Run-Time Meter 280

20.3.4 Compressing CPU Memory . . . 282

20.3.5 Waiting and Stopping 282

20.3.6 Multiprocessing Mode 282

20.4 Communication via Distributed I/O 283

20.4.1 Addressing Distributed I/O 284

20.4.2 Configuring Distributed I/O . . . 288

20.4.3 Special Functions for Distributed I/O 294

20.4.4 System Functions for Distributed I/O 298

20.5 Global Data Communication . . . 303

20.5.1 Fundamentals 303

20.5.2 Configuring GD communication . 305

20.5.3 System Functions for GD Communication 307

20.6 S7 Basic Communication 307

20.6.1 Station-Internal S7 Basic Communication 307

20.6.2 System Functions for Data Interchange within a Station . . . 309

20.6.3 Station-External S7 Basic Communication 310

20.6.4 System Functions for Station-External S7 Basic Communication . 311

20.7 S7 Communication 313

20.7.1 Fundamentals 313

20.7.2 Two-Way Data Exchange 315

20.7.3 One-Way Data Exchange 317

20.7.4 Transferring Print Data 318

20.7.5 Control Functions 318

20.7.6 Monitoring Functions 319

20.8 PtP Communication with S7-300C 322

20.8.1 Fundamentals 322

20.8.2 ASCII Driver and 3964(R) Procedure 324

20.8.3 RK512 Computer Link 325

20.9 Configuration in RUN 328

20.9.1 Preparation of Modifications to Configuration 328

20.9.2 Changing the Configuration . . . 330
20.9.3 Loading the Configuration. . . . 330
20.9.4 CiR Synchronization Time. . . . 331
20.9.5 Effects on Program Execution . . 331
20.9.6 Controlling the CiR Procedure. . 332

21 Interrupt Handling 333

21.1 General Remarks. 333

21.2 Time-of-Day Interrupts 334

21.2.1 Handling Time-of-Day Interrupts 335
21.2.2 Configuring Time-of-Day Interrupts with STEP 7. 336
21.2.3 System Functions for Time-of-Day Interrupts 336

21.3 Time-Delay Interrupts 337

21.3.1 Handling Time-Delay Interrupts. 338
21.3.2 Configuring Time-Delay Interrupts with STEP 7. 339
21.3.3 System Functions for Time-Delay Interrupts 339

21.4 Watchdog Interrupts 340

21.4.1 Handling Watchdog Interrupts. . 340
21.4.2 Configuring Watchdog Interrupts with STEP 7 341

21.5 Hardware Interrupts 342

21.5.1 Generating a Hardware Interrupt 342
21.5.2 Servicing Hardware Interrupts. . 343
21.5.3 Configuring Hardware Interrupts with STEP 7 344

21.6 DPV1 Interrupts 344

21.7 Multiprocessor Interrupt. 346

21.8 Synchronous Cycle Interrupts . . 347

21.8.1 Processing Synchronous Cycle Interrupts. 347
21.8.2 Isochrone Updating of Process Image. 348
21.8.3 Programming of Synchronous Cycle Interrupts with STEP 7 . . 349

21.9 Handling Interrupts 349

21.9.1 Disabling and Enabling Interrupts 349
21.9.2 Delaying and Enabling Delayed Interrupts. 350
21.9.3 Reading Additional Interrupt Information 350

22 Restart Characteristics 353

22.1 General Remarks 353

22.1.1 Operating Modes 353
22.1.2 HOLD Mode 354
22.1.3 Disabling the Output Modules . . 354
22.1.4 Restart Organization Blocks . . . 354

22.2 Power-Up 355

22.2.1 STOP Mode. 355
22.2.2 Memory Reset. 356
22.2.3 Retentivity 356
22.2.4 Restart Parameterization 356

22.3 Types of Restart. 357

22.3.1 START-UP Mode. 357
22.3.2 Cold Restart. 357
22.3.3 Warm Restart 359
22.3.4 Hot Restart 359

22.4 Ascertaining a Module Address. . 360

22.5 Parameterizing Modules 362

22.5.1 General Remarks on Parameterizing Modules 362
22.5.2 System Functions for Module Parameterization 363
22.5.3 Blocks for Data Record Transfer . 364

23 Error Handling 367

23.1 Synchronous Errors. 367

23.2 Synchronous Error Handling . . . 369

23.2.1 Error Filters. 369
23.2.2 Masking Synchronous Errors. . . 370
23.2.3 Unmasking Synchronous Errors . 370
23.2.4 Reading the Error Register 370
23.2.5 Entering a Substitute Value. . . . 371

23.3 Asynchronous Errors 371

23.4 System Diagnostics 374

23.4.1 Diagnostic Events and Diagnostic Buffer. 374
23.4.2 Writing User Entries in the Diagnostic Buffer. 374
23.4.3 Evaluating Diagnostic Interrupts . 375
23.4.4 Reading the System Status List. . 375

Variable Handling. 378

24 Data Types 379
24.1 Elementary Data Types 379
24.1.1 Declaration of Elementary Data Types 379
24.1.2 BOOL, BYTE, WORD, DWORD, CHAR 380
24.1.3 Number Representations 381
24.1.4 Time Representations 383
24.2 Complex Data Types 384
24.2.1 DATE_AND_TIME. 384
24.2.2 STRING 385
24.2.3 ARRAY 386
24.2.4 STRUCT. 388
24.3 User-Defined Data Types 390
24.3.1 Programming UDTs Incrementally 390
24.3.2 Source-File-Oriented Programming of UDTs 390

25 Indirect Addressing 392
25.1 Pointers 392
25.1.1 Area Pointer 392
25.1.2 DB Pointer. 392
25.1.3 ANY Pointer. 394
25.2 Types of Indirect Addressing in STL 395
25.2.1 General 395
25.2.2 Indirect Addresses. 395
25.2.3 Memory-Indirect Addressing . . 396
25.2.4 Register-Indirect Area-Internal Addressing. 396
25.2.5 Register-Indirect Area-Crossing Addressing. 398
25.2.6 Summary 398
25.3 Working with Address Registers 399
25.3.1 Loading into an Address Register 399
25.3.2 Transferring from an Address Register 399
25.3.3 Swap Address Registers 399
25.3.4 Adding to the Address Register . 399
25.4 Special Features of Indirect Addressing. 401
25.4.1 Using Address Register AR1. . . 401
25.4.2 Using Address Register AR2. . . 403
25.4.3 Restrictions with Static Local Data. 403

26 Direct Variable Access 405
26.1 Loading the Variable Address . . 405
26.2 Data Storage of Variables 406
26.2.1 Storage in Global Data Blocks . . 406
26.2.2 Storage in Instance Data Blocks . 407
26.2.3 Storage in the Temporary Local Data. 407
26.3 Data Storage when Transferring Parameters 410
26.3.1 Parameter Storage in Functions . 410
26.3.2 Storing Parameters in Function Blocks 412
26.3.3 “Variable” ANY Pointer 412
26.4 Brief Description of the Message Frame Example. 414

Structured Control Language (SCL) . .421

27 Introduction, Language Elements 422
27.1 Integration in SIMATIC 422
27.1.1 Installation 422
27.1.2 Setting Up a Project 422
27.1.3 Editing the SCL Source 422
27.1.4 Completing the Symbol Table . . 423
27.1.5 Compiling the SCL Program . . . 424
27.1.6 Loading SCL Blocks 424
27.1.7 Testing SCL Blocks 424
27.1.8 Addresses and Data Types 424
27.1.9 Data Type Views 426
27.2 Addressing 426
27.2.1 Absolute Addressing 426
27.2.2 Symbolic Addressing. 426
27.2.3 Indirect Addressing in SCL . . . 427
27.3 Operators 429
27.4 Expressions. 429
27.4.1 Arithmetic Expressions. 429
27.4.2 Comparison Expressions 431
27.4.3 Logical Expressions 431
27.5 Value Assignments. 432

27.5.1 Assignment for Elementary Data Types 432
27.5.2 Assignment of DT and STRING Variables 432
27.5.3 Assignment of Structures 432
27.5.4 Assigning Fields 432

28 Control Statements 433

28.1 IF Statement 433
28.2 CASE Statement 434
28.3 FOR Statement 434
28.4 WHILE Statement 435
28.5 REPEAT Statement 435
28.6 CONTINUE Statement 436
28.7 EXIT Statement 436
28.8 RETURN Statement 436
28.9 GOTO Statement 436

29 SCL Blocks 438

29.1 SCL Blocks – General 438
29.2 Programming SCL Blocks 438
29.2.1 Function FC without a Function Value 439
29.2.2 Function FC with Function Value 439
29.2.3 Function Block FB 439
29.2.4 Temporary Local Data 440
29.2.5 Static Local Data 441
29.2.6 Block Parameters 441
29.2.7 Formal Parameters 442
29.3 Calling SCL Blocks 442
29.3.1 Function FC without Function Value 443
29.3.2 Function FC with Function Value 443
29.3.3 Function Block with its Own Data Block 443
29.3.4 Function Block as Local Instance 444
29.3.5 Actual Parameters 444
29.4 EN/ENO Mechanism 445
29.4.1 OK Variable 445
29.4.2 ENO Output 445
29.4.3 EN Input 446

30 SCL Functions 447

30.1 Timer Functions 447
30.2 Counter Functions 448
30.3 Math Functions 449
30.4 Shifting and Rotating 449
30.5 Conversion Functions 450
30.5.1 Implicit Conversion Functions . . 450
30.5.2 Explicit Conversion Functions . . 450
30.6 Programming Your Own Functions with SCL 452
30.7 Programming Your Own Functions with STL 454
30.8 Brief Description of the SCL Examples 454
30.8.1 Conveyor Example 454
30.8.2 Message Frame Example 455
30.8.3 General Examples 456

31 IEC Functions 457

31.1 Conversion Functions 457
31.2 Comparison Functions 459
31.3 STRING Functions 460
31.4 Date/Time-of-Day Functions . . . 462
31.5 Numerical Functions 463

Appendix 465

32 S5/S7 Converter 466

32.1 General 466
32.2 Preparation 467
32.2.1 Checking Executability on the Target System (PLC) 467
32.2.2 Checking Program Execution Characteristics 467
32.2.3 Checking the Modules 469
32.2.4 Checking the Addresses 469
32.3 Converting 470
32.3.1 Creating Macros 470
32.3.2 Preparing the Conversion 471
32.3.3 Starting the Converter 471
32.3.4 Convertible Functions 472
32.4 Post-Editing 473

32.4.1 Creating the STEP 7 Project . . . 473
32.4.2 Unconvertible Functions 474
32.4.3 Address Changes 474
32.4.4 Indirect Addressing 475
32.4.5 Access to "Excessively Long" Data Blocks 477
32.4.6 Working with Absolute Addresses 477
32.4.7 Parameter Initialization 477
32.4.8 Special Function Organization Blocks 477
32.4.9 Error Handling. 477

33 Block Libraries 480

33.1 Organization Blocks. 480
33.2 System Function Blocks. 481
33.3 IEC Function Blocks 484
33.4 S5-S7 Converting Blocks 485
33.5 TI-S7 Converting Blocks 486
33.6 PID Control Blocks 487
33.7 Communication Blocks 487
33.8 Miscellaneous Blocks 487

34 STL Operation Overview . . . 488

34.1 Basic Functions 488
34.1.1 Binary Logic Operations 488
34.1.2 Memory Functions 489
34.1.3 Transfer Functions. 489
34.1.4 Timer Functions 489
34.1.5 Counter Functions 489
34.2 Digital Functions 489
34.2.1 Comparison Functions 489
34.2.2 Math Functions 490
34.2.3 Arithmetic Functions 490
34.2.4 Conversion Functions 490
34.2.5 Shift Functions 490
34.2.6 Word Logic Operations. 490
34.3 Program Flow Control 491
34.3.1 Jump Functions. 491
34.3.2 Master Control Relay. 491
34.3.3 Block Functions 491
34.4 Indirect Addressing. 491

35 SCL Statement and Function Overview. 492

35.1 Operators 492
35.2 Control Statements 492
35.3 Block Calls 492
35.4 SCL Standard Functions 493
35.4.1 Timer Functions 493
35.4.2 Counter Functions 493
35.4.3 Conversion Functions 493
35.4.4 Math Functions 494
35.4.5 Shift and Rotate. 494
