

Laser Chemistry

Spectroscopy, Dynamics and Applications

Helmut H. Telle *Swansea University, UK*

Angel González Ureña *Universidad Complutense de Madrid, Spain*

Robert J. Donovan *Edinburgh University, UK*

John Wiley & Sons, Ltd

Contents

Preface	xi
About the authors	xiii
1 Introduction	1
1.1 Basic concepts in laser chemistry	1
1.2 Organization of the book	10
PART 1 PRINCIPLES OF LASERS AND LASER SYSTEMS	15
2 Atoms and molecules, and their interaction with light waves	17
2.1 Quantum states, energy levels and wave functions	17
2.2 Dipole transitions and transition probabilities	20
2.3 Einstein coefficients and excited-state lifetimes	23
2.4 Spectroscopic line shapes	24
2.5 The polarization of light waves	26
2.6 Basic concepts of coherence	26
2.7 Coherent superposition of quantum states and the concept of wave packets	29
3 The basics of lasers	35
3.1 Fundamentals of laser action	35
3.2 Laser resonators	39
3.3 Frequency and spatial properties of laser radiation	41
3.4 Gain in continuous-wave and pulsed lasers	43
3.5 <i>Q</i> -switching and the generation of nanosecond pulses	45
3.6 Mode locking and the generation of picosecond and femtosecond pulses	48
4 Laser systems	51
4.1 Fixed-wavelength gas lasers: helium–neon, rare-gas ion and excimer lasers	51
4.2 Fixed-wavelength solid-state lasers: the Nd:YAG laser	55
4.3 Tuneable dye laser systems	57
4.4 Tuneable Ti:sapphire laser systems	60
4.5 Semiconductor diode lasers	63
4.6 Quantum cascade lasers	67
4.7 Non-linear crystals and frequency-mixing processes	68
4.8 Three-wave mixing processes: doubling, sum and difference frequency	72
4.9 Optical parametric oscillation	74

PART 2 SPECTROSCOPIC TECHNIQUES IN LASER CHEMISTRY	77
5 General concepts of laser spectroscopy	79
5.1 Spectroscopy based on photon detection	80
5.2 Spectroscopy based on charged particle detection	81
5.3 Spectroscopy based on measuring changes of macroscopic physical properties of the medium	82
6 Absorption spectroscopy	87
6.1 Principles of absorption spectroscopy	87
6.2 Observable transitions in atoms and molecules	89
6.3 Practical implementation of absorption spectroscopy	91
6.4 Multipass absorption techniques	95
7 Laser-induced fluorescence spectroscopy	101
7.1 Principles of laser-induced fluorescence spectroscopy	102
7.2 Important parameters in laser-induced fluorescence	105
7.3 Practical implementation of laser-induced fluorescence spectroscopy	113
8 Light scattering methods: Raman spectroscopy and other processes	119
8.1 Light scattering	119
8.2 Principles of Raman spectroscopy	121
8.3 Practical implementation of Raman spectroscopy	125
9 Ionization spectroscopy	129
9.1 Principles of ionization spectroscopy	129
9.2 Photoion detection	131
9.3 Photoelectron detection	135
9.4 Photoion imaging	138
PART 3 OPTICS AND MEASUREMENT CONCEPTS	143
10 Reflection, refraction and diffraction	145
10.1 Selected properties of optical materials and light waves	145
10.2 Reflection and refraction at a plane surface	149
10.3 Light transmission through prisms	153
10.4 Light transmission through lenses and imaging	155
10.5 Imaging using curved mirrors	158
10.6 Superposition, interference and diffraction of light waves	158
10.7 Diffraction by single and multiple apertures	161
10.8 <i>Diffraction gratings</i>	164
11 Filters and thin-film coatings	169
11.1 Attenuation of light beams	169
11.2 Beam splitters	170
11.3 <i>Wavelength-selective filters</i>	172
11.4 Polarization filters	173
11.5 Reflection and filtering at optical component interfaces	176
11.6 Thin-film coatings	177

12	Optical fibres	183
12.1	Principles of optical fibre transmission	183
12.2	Attenuation in fibre transmission	185
12.3	Mode propagation in fibres	186
13	Analysis instrumentation and detectors	189
13.1	Spectrometers	189
13.2	Interferometers	190
13.3	Photon detectors exploiting the photoelectric effect	193
13.4	Photodetectors based on band-gap materials	194
13.5	Measuring laser power and pulse energy	197
13.6	Analysis of charged particles for charge, mass and energy	198
13.7	Charged-particle detectors	202
14	Signal processing and data acquisition	205
14.1	Signals, noise and noise reduction	205
14.2	DC, AC and balanced detection methods	208
14.3	Lock-in detection techniques	209
14.4	Gated integration/boxcar averaging techniques	212
14.5	Event counting	213
14.6	Digital conversion and data acquisition	216
PART 4 LASER STUDIES OF PHOTODISSOCIATION, PHOTOIONIZATION AND UNIMOLECULAR PROCESSES		219
15	Photodissociation of diatomic molecules	223
15.1	Photofragment kinetic energy	223
15.2	Angular distributions and anisotropic scattering	225
15.3	Predissociation and curve crossing	226
15.4	Femtosecond studies: chemistry in the fast lane	228
15.5	Dissociation and oscillatory continuum emission	230
16	Photodissociation of triatomic molecules	233
16.1	Photodissociation of water	233
16.2	Photodissociation of ozone	235
16.3	Laser-induced fluorescence and cavity ring-down studies	238
16.4	Femtosecond studies: transition-state spectroscopy	238
17	Photodissociation of larger polyatomic molecules: energy landscapes	241
17.1	Rydberg tagging	241
17.2	Photodissociation of ammonia	242
17.3	Selective bond breaking	243
17.4	Molecular elimination and three-body dissociation	244
18	Multiple and multiphoton excitation, and photoionization	245
18.1	Infrared multiple-photon activation and unimolecular dissociation	246
18.2	Continuum intermediate states and bond stretching	247

18.3	High-resolution zero kinetic energy photoelectron spectroscopy	251
18.4	Autoionization	254
18.5	Photoion-pair formation	256
19	Coherent control and the future of ultra-short probing	259
19.1	Coherent control of chemical processes	259
19.2	Time-resolved diffraction and attosecond probing	263
	PART 5 LASER STUDIES OF BIMOLECULAR REACTIONS	265
20	Basic concepts of kinetics and reaction dynamics	267
20.1	Résumé of kinetics	267
20.2	Introduction to reaction dynamics: total and differential reaction cross-sections	269
20.3	The Connection between dynamics and kinetics	272
20.4	Basic concepts of potential energy surfaces	273
20.5	Calculating potential energy surfaces	276
21	The molecular beam method: basic concepts and examples of bimolecular reaction studies	279
21.1	Basic concepts	279
21.2	Interpretation of spatial and energy distributions: dynamics of a two-body collision	283
21.3	Interpretation of spatial and energy distributions: product angular and velocity distributions as a route to the reaction mechanism	289
22	Chemical reactions with laser-prepared reagents	295
22.1	Energy selectivity: mode-selective chemistry	295
22.2	Energy selectivity: electronic excitation	296
22.3	Stereodynamical effects with laser-prepared reagents	300
23	Laser probing of chemical reaction products	307
23.1	Where does the energy of a chemical reaction go?	307
23.2	Probing the product state distribution of a chemical reaction	307
23.3	Crossed-beam techniques and laser spectroscopic detection: towards the state-to-state differential reaction cross-section measurements	309
	PART 6 LASER STUDIES OF CLUSTER AND SURFACE REACTIONS	323
24	Laser studies of complexes: Van der Waals and cluster reactions	327
24.1	Experimental set-ups and methodologies	327
24.2	Metal-containing complexes	332
24.3	Non-metal van der Waals complexes	339
25	Solvation dynamics: elementary reactions in solvent cages	349
25.1	Dissociation of clusters containing I_2	349
25.2	Dissociation of clusters containing I_2^-	350
25.3	Proton-transfer reactions	353

26	Laser studies of surface reactions: an introduction	357
26.1.	Résumé of metal surface properties and electronic structure	357
26.2.	Particle–surface interaction	360
26.3.	Surface reaction mechanisms	364
26.4.	Experimental methods to investigate laser-induced surface reactions	367
27	Laser studies of surface reactions: photochemistry in the adsorbed state	371
27.1.	Adsorbate- versus substrate-mediated processes	371
27.2.	Examples of photoinduced reactions in adsorbates	378
27.3.	Femto-chemistry at surfaces: the ultrafast reaction CO/O—[Ru(0001)]	387
PART 7 SELECTED APPLICATIONS		391
28	Environmental and other analytical applications	393
28.1	Atmospheric gas monitoring using tuneable diode laser absorption spectroscopy	394
28.2	Closed-path tuneable diode laser absorption spectroscopy applications	398
28.3	Open-path tuneable diode laser absorption spectroscopy applications	403
28.4	The lidar technique for remote analysis	409
28.5	Lidar in the study of atmospheric chemistry: tropospheric measurements	412
28.6	Lidar in the study of atmospheric chemistry: stratospheric measurements	419
28.7	Laser desorption and ionization: laser-induced breakdown spectroscopy, matrix-assisted laser desorption and ionization, and aerosol time-of-flight mass spectrometry	422
29	Industrial monitoring and process control	433
29.1	Laser-spectroscopic analysis of internal combustion engines	433
29.2	Laser-spectroscopic analysis of burners and incinerators	438
29.3	Laser-chemical processes at surfaces: nanoscale patterning	444
30	Laser applications in medicine and biology	449
30.1	Photodynamic therapy	449
30.2	Intra-cell mapping of drug delivery using Raman imaging	453
30.3	Breath diagnostics using laser spectroscopy	455
30.4	From photons to plant defence mechanisms	460
30.5	Application to volatile compounds: on-line detection of plant stress	461
30.6	Laser applications to the study of non-volatile compounds in fruits	463
