

# ELECTRONIC STRUCTURE CALCULATIONS FOR SOLIDS AND MOLECULES:

Theory and Computational Methods

JORGE KOHANOFF

*School of Mathematics and Physics, Queen's University Belfast*

 **CAMBRIDGE**  
UNIVERSITY PRESS

# Contents

<i>Preface</i>	<i>page xi</i>
<i>List of symbols</i>	<i>xvi</i>
<i>List of acronyms</i>	<i>xx</i>
<b>Part I Theory</b>	<b>1</b>
<b>1 The problem of the structure of matter</b>	<b>3</b>
1.1 Adiabatic approximation	6
1.2 Classical nuclei approximation	10
<b>2 The electronic problem</b>	<b>15</b>
2.1 Screening: Gouy—Chapman and Debye—Hückel analysis	17
2.2 The pair correlation function	19
2.3 Many-body theory of electronic systems	22
<b>3 Quantum many-body theory: chemical approaches</b>	<b>28</b>
3.1 The Hartree—Fock approximation	31
3.2 Post-Hartree—Fock methods	37
<b>4 Density functional theory</b>	<b>51</b>
4.1 Thomas—Fermi theory	51
4.2 Modern density functional theory	56
4.3 Kinetic correlation: the adiabatic connection	65
4.4 Some observations about Kohn—Sham theory	70
<b>5 Exchange and correlation in DFT: approximations and their performances</b>	<b>75</b>
5.1 The local density approximation	77
5.2 Gradient expansions	85
5.3 Non-locality: the weighted density approximation	94

5.4	Hybrid HF-KS approaches	96
5.5	Exact exchange: the optimized effective potential method	97
5.6	Orbital-dependent correlation functionals	103
5.7	Van der Waals (dispersion) interactions	108
5.8	Green's function approach: the GW approximation	110
5.9	Strong correlations: LDA+U and LDA+DMFT	112
5.10	Summary of exchange-correlation functionals	113
	<b>Part II Computational methods</b>	<b>121</b>
<b>6</b>	<b>Solving the electronic problem in practice</b>	<b>123</b>
6.1	Kohn—Sham and Hartree—Fock equations	123
6.2	Condensed phases: Bloch's theorem and periodic boundary conditions	128
<b>7</b>	<b>Atomic pseudopotentials</b>	<b>143</b>
7.1	Pseudopotential theory	144
7.2	Construction of pseudopotentials	148
7.3	Separable form of atomic pseudopotentials	164
7.4	Ultrasoft pseudopotentials	169
7.5	Some practical aspects of pseudopotentials	174
<b>8</b>	<b>Basis sets</b>	<b>178</b>
8.1	Periodic systems	181
8.2	Plane waves	182
8.3	Other floating basis sets	188
8.4	Atom-centered basis sets	189
8.5	Mixed basis sets	202
8.6	Augmented basis sets	202
<b>9</b>	<b>Electronic structure methods</b>	<b>217</b>
9.1	Multiple scattering methods: the KKR approach	218
9.2	All-electron methods based on augmentation spheres	220
9.3	The pseudopotential plane wave method (PPW)	228
9.4	Atom-centered basis sets	248
9.5	Gaussian basis sets	259
<b>10</b>	<b>Simplified approaches to the electronic problem</b>	<b>270</b>
10.1	Tight-binding methods	272
10.2	Semiempirical approaches in quantum chemistry	286
10.3	Relation between tight-binding and semiempirical methods	294
10.4	Many-body classical potentials	296

10.5 Classical force fields	298
10.6 Hybrid QM-MM methods	300
10.7 Orbital-free density functional approaches	304
<b>11 Diagonalization and electronic self-consistency</b>	<b>311</b>
11.1 Diagonalization	312
11.2 Self-consistency: mixing schemes	316
11.3 Direct minimization of the electronic energy functional	318
<b>12 First-principles molecular dynamics (Car—Parrinello)</b>	<b>323</b>
12.1 Density functional molecular dynamics	324
12.2 The Car—Parrinello Lagrangian	325
12.3 The Car—Parrinello equations of motion	328
12.4 Orthonormalization	330
12.5 Pre-conditioning	332
12.6 Performance of CPMD	333
<i>Index</i>	339
