

Table of Contents

The Research Laboratory of Electronics	1
PART I SOLID STATE PHYSICS, ELECTRONICS AND OPTICS	
Section 1 Materials and Fabrication	5
Chapter 1 Compound Semiconductor Materials and Devices	7
<i>Professor Clifton J. Fonstad, Jr.</i>	
1.1 Introduction	7
• 1.2 Epitaxy-on-Electronics Integration Technology	8
• 1.3 Monolithic Enhancement of MESFET Electronics with Resonant Tunneling Diodes	9
• 1.4 Hyperthermal Molecular Beam Dry Etching of III-V Compound Semiconductors	11
1.5 InGaAsP/GaAs Light Emitting Diodes Monolithically Integrated on GaAs VLSI Electronics	11
1.6 The OPTOCHIP Project and other Multi-group OEIC Chips	13
1.7 Monolithic Integration of Vertical-Cavity Surface-Emitting Laser Diodes on GaAs VLSI Electronics	14
1.8 Monolithic Integration of In-Plane, Surface-Emitting Laser Diodes on GaAs VLSI Electronics	14
1.9 Metal-Semiconductor-Metal Photodetectors from a GaAs VLSI Process	15
1.10 Monolithic Integration of 1550 nm Photodetectors on GaAs Transimpedance Amplifier Chips	16
1.11 Microwave Characterization of Optoelectronic Devices	17
1.12 Reduced-Temperature Growth of Distributed Bragg Reflectors and Monolithic Integration of Self-Electrooptic-Effect Devices on GaAs on GaAs VLSI Electronics	18
1.13 Compact Integrated Optics Structures for Monolithic Integration	20
1.14 Integrated Normal Incidence Single- and Dual-Band Quantum-Well Intersubband Photodetectors	21
1.15 Figures of Merit for Quantum-Well Intersubband Photodetector Focal-Plane Arrays in Different Operating Regimes	21
1.16 Publications	22
Chapter 2 Physics of InAlAs/InGaAs Heterostructure Field-Effect Transistors	23
<i>Professor Jesús A. del Alamo</i>	
• 2.1 Introduction	23
• 2.2 A Model for Tunneling-Limited Breakdown in High-Power HEMTs	24
• 2.3 Publications and Conference Papers	32
Chapter 3 Epitaxial Growth and Processing of Compound Semiconductors	33
<i>Professor Leslie A. Kolodziejski, Dr. Gale S. Petrich</i>	
3.1 Introduction	33
• 3.2 Reducing the Defect Density in MBE-ZnSe/III-V Heterostructures	33
• 3.3 Microstructural Analysis of ZnSe/GaAs Heterostructures	37
3.4 Growth of (In,Ga)P/GaAs LEDs for Optoelectronic-VLSI	39
3.5 InP-Based Devices for Optical Communication Networks	40
3.6 (In,Ga)(As,P) Composition Control and Characterization	43
3.7 Photonic Bandgap Structures	44

- Sponsored by the Joint Services Electronics Program.

Section 2	Quantum-Effect Devices	49
Chapter 1	Single-Electron Electronics	51
	<i>Professor Marc A. Kastner</i>	
• 1.1	Goals and Objectives	51
• 1.2	Summary of Recent Work	51
• 1.3	Publications	52
Chapter 2	Theory of Coulomb Blockade in Semiconductor Devices	53
	<i>Professor Patrick A. Lee</i>	
• 2.1	Project Description	53
• 2.2	Coulomb Blockade in the Regime of Activated Conduction	55
• 2.3	Publications	56
Chapter 3	Superconducting and Quantum-Effect Electronics	57
	<i>Professor Terry P. Orlando</i>	
3.1	Nonlinear Dynamics of Discrete Josephson Arrays	57
3.2	Resonance Splitting in Inductively Coupled Arrays	58
3.3	Self Field Effects on Flux Flow in Josephson Arrays	59
3.4	Triangular Arrays of Josephson Junctions	60
3.5	Quantum Device Simulations	61
3.6	Publications	62
Chapter 4	Nanostructures, Technology, Research, and Applications	63
	<i>Professor Henry I. Smith</i>	
4.1	NanoStructures Laboratory	63
• 4.2	Scanning-Electron-Beam Lithography	63
• 4.3	Spatial-Phase-Locked Electron-Beam Lithography	64
• 4.4	X-Ray Nanolithography	65
• 4.5	Improved Mask Technology for X-Ray Lithography	68
• 4.6	A High-Precision Mask Alignment and Gapping System with Immunity to Overlayers	69
• 4.7	Interferometric Lithography	72
• 4.8	High-Performance Sub-100 nm MOSFETs using X-ray Lithography	74
• 4.9	Back-gated CMOS on SOI Active Substrates	75
4.10	Fabrication of T-gate Devices Using X-ray Lithography	77
• 4.11	Studies of Coulomb Charging Effects and Tunneling in Semiconductor Nanostructures	79
4.12	Fabrication and Transport Studies of Lateral Surface Superlattices in GaAs/AlGaAs Modulation Doped Field-Effect Transistors	81
• 4.13	Single-Electron Transistor Research	81
• 4.14	One-Dimensional Photonic Band Gap Devices in SOI Waveguides	83
4.15	Fabrication of Grating-Based Optical Filters	84
4.16	Integrated Optical Grating-Based Matched Filters for Fiber-Optic Communications	86
4.17	High-Dispersion, High-Efficiency Transmission Gratings for Astrophysical X-ray Spectroscopy	88
• 4.18	Submicrometer-Period Transmission Gratings for X-ray and Atom-Beam Spectroscopy and Interferometry	89
4.19	Super-smooth X-ray Reflection Gratings	90
4.20	Transmission Gratings as UV-blocking Filters for Neutral Atom Imaging	92
• 4.21	Publications	93

Chapter 5	Single-Electron Spectroscopy	95
	<i>Professor Raymond C. Ashoori</i>	
• 5.1	Introduction	95
• 5.2	Scanning Probe Microscopy to Look Beneath the Surfaces of Samples	95
• 5.3	Single-Electron Capacitance Spectroscopy: Study of Quantum Dots	97
• 5.4	A Remarkable New Effect	98
• 5.5	Tunneling into Two-Dimensional Systems	100
• 5.6	Publications	102
Section 3	Optics and Devices	103
Chapter 1	Optics and Quantum Electronics	105
	<i>Professor Hermann A. Haus, Professor Erich P. Ippen, Professor James G. Fujimoto, Professor Peter L. Hagelstein, Dr. Brett E. Bouma, Dr. Jay N. Damask</i>	
• 1.1	Modelocking of Fiber Lasers	105
1.2	Long-Distance Nonlinear RZ Communications	106
1.3	Squeezing in Optical Fibers	107
1.4	Pulse-Excited Fiber Gyro	108
1.5	Optical Resonant Structures	109
• 1.6	Efficient Frequency-doubling of a Stretched-pulse Fiber Laser	110
• 1.7	Wavelength Shifting in Passive InGaAsP/InP Quantum-well Waveguides	112
1.8	Investigation of Air-Bridge-Waveguide Photonic Bandgap Structures	113
• 1.9	Femtosecond Optical Nonlinearities in ZnSe and Characterization of ZnSe/GaAs Heterostructures	114
1.10	Femtosecond Continuum Studies of PbTe Quantum Dots at 1.5 μm	115
• 1.11	Ultrafast Dynamics of K_3C_{60} and Rb_3C_{60} in the Normal and Superconducting Phase	115
• 1.12	Ultrashort Pulse Generation and Ultrafast Phenomena	117
1.13	Laser Medicine and Medical Imaging	120
1.14	Transverse Dielectric Response from QED	131
1.15	Maxwell's Equations and Configuration Space Photon Equations	132
1.16	Possible New Tetragonal Phase in PdH	133
1.17	Sub-surface Interstitial Diffusion Barriers	134
1.18	Electromigration with Interstitial Diffusion Barriers	135
1.19	Models for Anomalous Energy Transfer	137
Chapter 2	Optical Propagation and Communication	145
	<i>Professor Jeffrey H. Shapiro, Dr. Ngai C. Wong</i>	
2.1	Introduction	145
2.2	Nonlinear and Quantum Optics	145
2.3	Object Detection and Recognition	148
2.4	Optical Frequency Metrology	150
Chapter 3	High-Frequency (>100 GHz) and High-Speed (<10 ps) Electronic Devices	153
	<i>Professor Qing Hu, Dr. Gerhard de Lange</i>	
3.1	Introduction	153
3.2	Micromachined Millimeter-wave Devices	154
3.3	Far-infrared and Picosecond Time-resolved Transport Studies of Quantum-effect	

Table of Contents

	Devices	156
3.4	Intersubband-transitions Lasers and Optical Parametric Oscillators	159
3.5	Millimeter-wave, THz, and Subpicosecond Facilities	162
3.6	Publications	162
Section 4	Surfaces and Interfaces	165
Chapter 1	Synchrotron X-Ray Studies of Surface Disorder	167
	<i>Professor Robert J. Birgeneau</i>	
• 1.1	Introduction	167
• 1.2	Stability of Vicinal Si(111) Surfaces Under Sublimation and Electromigration	167
Chapter 2	Semiconductor Surface Studies	171
	<i>Professor John D. Joannopoulos</i>	
• 2.1	Introduction	171
• 2.2	Flipping Dimers on the Si(100) Surface	171
• 2.3	Signatures of Bulk and Surface Defects	173
• 2.4	Publications	175
Chapter 3	Step Structures and Epitaxy on Semiconductor Surfaces	177
	<i>Professor Simon G.J. Mochrie</i>	
• 3.1	Introduction	177
• 3.2	Publications	182
PART II	APPLIED PHYSICS	
Section 1	Atomic, Molecular, and Optical Physics	185
Chapter 1	Quantum Optics and Photonics	187
	<i>Professor Shaoul Ezekiel, Dr. Selim M. Shahriar, Dr. Stephen P. Smith</i>	
1.1	Efficient, Fast, Low-Power Optical Phase Conjugation Using Two-Photon-Induced Zeeman Coherence in Rubidium for Spatially Broadband Squeezing	187
1.2	Turbulence Aberration Correction with High-Speed High-Gain Optical Phase Conjugation in Sodium Vapor	190
1.3	Enhanced Nondegenerate Four-wave-mixing due to Electromagnetically Induced Transparency in a Spectral Hole Burning Crystal for Five-Dimensional Optical Data Storage	194
1.4	Long-Term Optical Data Storage in Three and Four Dimensions Using Thick Holograms	198
1.5	A Rubidium Atom Trap for Applications to Nanolithography Using Atom Interferometry	202
1.6	Fiber-Optic Damage Detection	203
1.7	Demonstration of a Fiber-optic Quench Detector for Large Superconducting Magnets	205
Chapter 2	Basic Atomic Physics	209
	<i>Professor Daniel Kleppner, Professor David E. Pritchard, Professor Wolfgang Ketterle</i>	
• 2.1	Studies in Quantum Chaos: Rydberg Atoms in Strong Fields	209
• 2.2	Determination of the Rydberg Frequency	212
• 2.3	Precision Mass Spectrometry of Ions	216
• 2.4	Atom Interferometry	219
• 2.5	Cooling and Trapping Neutral Atoms	222

Section 2	Plasma Physics	229
Chapter 1	Plasma Dynamics	231
	<i>Professor Abraham Bers, Professor Bruno Coppi, Professor Miklos Porkolab, Dr. Stefano Migliuolo, Dr. Abhay K. Ram, Dr. Linda E. Sugiyama, Palmyra E. Catravas, Ivan Mastovsky</i>	
1.1	Non-perturbative Beam Characterization with a Microwiggler	231
1.2	Plasma Wave Interactions - RF Heating and Current Generation	233
1.3	Physics of High-Energy Plasmas	248
Section 3	Electromagnetics	259
Chapter 1	Electromagnetic Wave Theory and Applications	261
	<i>Professor Jin Au Kong, Dr. Kung-Hau Ding, Dr. Robert T. Shin, Dr. Y-C. Eric Yang</i>	
1.1	SIR-C Polarimetric Radar Image Simulation and Interpretation	261
1.2	Polarimetric Passive Remote Sensing	262
1.3	Development of an Atmospheric Attenuation Model	264
1.4	Electromagnetic Modeling of Snow with Microstructures	264
1.5	Study of SAR and SCANSAR Interferometry	265
1.6	Inversion of Sea Ice Parameters	266
1.7	Study of Radio Interference on ILS Category III Operations	267
1.8	MMW Model for Three-Dimensional Radar Scattering from Targets and Background	268
• 1.9	Electromagnetic Waves in Complex Media	269
1.10	Publications	269
Section 4	Radio Astronomy	271
Chapter 1	Radio Astronomy	273
	<i>Professor Bernard F. Burke, Professor David H. Staelin, Professor Jacqueline N. Hewitt, Dr. Philip W. Rosenkranz</i>	
1.1	Algorithms for Operational Meteorological Satellite Instruments	273
1.2	Development and Operation of an NPOESS Aircraft Sounder Testbed Passive Microwave Sensor	273
1.3	Earth Observing System: Advanced Microwave Sounding Unit	273
1.4	Geostationary Microwave Sounder Study	274
1.5	High-Resolution Passive Microwave Imaging of Atmospheric Structure	274
1.6	Reduction of Variation	275
PART III	SYSTEMS AND SIGNALS	
Section 1	Computer-Aided Design	279
Chapter 1	Custom Integrated Circuits	281
	<i>Professor Jonathan Allen, Professor John L. Wyatt, Jr., Professor Jacob White, Professor Srinivas Devadas, Professor Anantha P. Chandrakasan, Dr. Ichiro Masaki</i>	
1.1	Custom Integrated Circuit Design	281
1.2	Cost-Effective Hybrid Vision Systems for Intelligent Highway Applications	282
1.3	Computer-Aided Design Techniques for Embedded System Design	286
1.4	Functional Verification of VLSI Systems	289
1.5	Offshore Structure Analysis - WAMIT Development	290
1.6	Coupled Simulation Algorithms for Microelectromechanical CAD (MEMCAD)	290
1.7	Simulation Algorithms for RF Circuits	291
1.8	Numerical Techniques for Simulating Josephson Junction Arrays	291

- Sponsored by the Joint Services Electronics Program.

Table of Contents

1.9	Efficient 3-D Interconnect Analysis	291
1.10	Model Order Reduction for Interconnect Analysis	293
1.11	Adaptive Techniques for Fast Integral Equation Solvers	293
Chapter 2	Computer-Integrated Design and Manufacture of Integrated Circuits	295
	<i>Professor Donald E. Troxel, Michael B. McIlrath</i>	
2.1	Advanced Modeling and Computational Prototyping	295
2.2	Distributed Collaborative Design and Prototyping Infrastructure	296
2.3	Design and Operation of Manufacturing Systems	302
Section 2	Digital Signal Processing	303
Chapter 1	Digital Signal Processing Research Program	305
	<i>Professor Alan V. Oppenheim, Professor Arthur B. Baggeroer, Professor Gregory W. Wornell, Professor Anantha P. Chandrakasan</i>	
1.1	Introduction	305
1.2	Model-Based Signal Enhancement	306
1.3	Multipass Receivers for Spread-Signature CDMA Systems	306
1.4	Single Mode Excitation in the Shallow Water Acoustic Channel Using Feedback Control	306
1.5	Coding and Modulation of Analog Data for Transmission over Broadcast and Fading Channels	307
1.6	Underwater Acoustic Communication	307
1.7	Algebraic and Probabilistic Structure in Fault-Tolerant Computation	308
1.8	Multiscale Signal Processing with Fractal Renewal Processes	308
1.9	Estimation and Equalization of Wireless Fading Channels	309
1.10	Properties of Approximate Parks-McClellan Filters	309
1.11	Distributed Signal Processing	310
1.12	Approximate Signal Processing	310
1.13	New Techniques for Communication with Feedback	310
1.14	Analysis and Applications of Systems Exhibiting Stochastic Resonance	311
1.15	Modeling and Design of Approximate Digital Signal Processors and Approximate DSP Networks	312
1.16	Sinusoidal Analysis Synthesis	312
1.17	Signal Processing and Communication with Solitons	312
1.18	A Parametric Framework for Non-Gaussian Signal Processing	313
1.19	Array Processing Techniques for Broadband Mode Estimation and Modal Tomography	314
1.20	Multiscale State-Space Algorithms for Processing 1/f Signals	314
1.21	Publications	315
1.22	Network-Driven Motion Estimation for Wireless Video Terminals	316
Chapter 2	Advanced Telecommunications and Signal Processing Program	319
	<i>Professor Jae S. Lim</i>	
2.1	Introduction	319
2.2	Signal Processing for Signals with Arbitrarily Shaped Regions of Support	320
2.3	Multiplexing of Variable Bit Rate Video Sources	320
2.4	Biorthogonality in Lapped Transforms: A Study in Audio Compression	321
2.5	Real-Time Video on the Internet	322
2.6	Very-Low-Bit-Rate Video Coding	322
2.7	HDTV Transmission Format Conversion and the HDTV Migration Path	322
2.8	Speech Enhancement	323

Chapter 3	Combined Source and Channel Coding for High-Definition Television	325
	<i>Professor William F. Schreiber</i>	
3.1	Project Description	325
3.2	Technology	326
3.3	Final Status	327
3.4	The Future	327
3.5	Publications	327
PART IV	BIOELECTRONICS	
Section 1	Genetic Analysis	331
Chapter 1	Genosensor Technology Development	333
	<i>Dr. Mark A. Hollis, Dr. Daniel J. Ehrlich</i>	
1.1	Microdetection Technology for Automated DNA Sequencing	333
1.2	Microfluidic Biodevices and Applications of Three-Dimensional Laser Processing to Biodevices	336
PART V	LANGUAGE, SPEECH AND HEARING	
Section 1	Speech Communication	341
Chapter 1	Speech Communication	343
	<i>Professor Kenneth N. Stevens, Dr. Joseph S. Perkell, Dr. Stefanie Shattuck-Hufnagel</i>	
1.1	Studies of the Acoustics, Perception, and Modeling of Speech Sounds	344
1.2	Speech Production Planning and Prosody	346
1.3	Studies of Normal Speech Production	347
1.4	Speech Research Relating to Special Populations	349
1.5	Models of Lexical Representation and Lexical Access	350
1.6	Locating Glides in Running Speech	351
1.7	Publications	352
Section 2	Sensory Communication	355
Chapter 1	Sensory Communication	357
	<i>Professor Louis D. Braida, Nathaniel I. Durlach, Dr. William M. Rabinowitz, Dr. Charlotte M. Reed, Dr. Mandayam A. Srinivasan, Dr. Thomas E.v. Wiegand, Dr. Patrick M. Zurek</i>	
1.1	Introduction	357
1.2	Hearing Aid Research	357
1.3	Enhanced Communication for Speechreaders	361
1.4	Tactile Communication of Speech	363
1.5	Multimicrophone Hearing Aids	366
1.6	Hearing Aid Device Development	367
1.7	Binaural Hearing	367
1.8	Virtual Environment Technology for Training: Enabling Research on the Human Operator	367
1.9	Spatial Knowledge Acquisition and Training Using Virtual Environments	374
1.10	Auditory Cues to Combat Spatial Disorientation	381
1.11	Research on Superauditory Localization for Improved Human-machine Interfaces	381
1.12	Training for Remote Sensing and Manipulation	388
1.13	Virtual Environment Technology for Training: Development of Haptic Interfaces	395

Table of Contents

1.14	Role of Skin Biomechanics in Mechanoreceptor Response	400
1.15	Human and Robot Hands: Mechanics, Sensorimotor Functions and Cognition	403
Section 3	Auditory Physiology	407
Chapter 1	Signal Transmission in the Auditory System	409
	<i>Professor Lawrence S. Frishkopf, Professor Nelson Y-S. Kiang, Professor William T. Peake, Professor William M. Siebert, Professor Thomas F. Weiss, Professor Dennis M. Freeman, Dr. Bertrand Delgutte, Dr. Donald K. Eddington, Dr. John J. Guinan, Jr., Dr. John J. Rosowski</i>	
1.1	Introduction	409
1.2	Middle and External Ear	409
1.3	Cochlear Mechanisms	412
1.4	Auditory Neural Processing of Speech	417
1.5	Cochlear Efferent System	419
1.6	Cochlear Implants	421
Section 4	Linguistics	427
Chapter 1	Linguistics	429
	<i>Professor Noam Chomsky, Professor Morris Halle</i>	
1.1	Introduction	429
1.2	Abstracts of Doctoral Dissertations	429
APPENDICES		
Appendix A	RLE Publications and Papers Presented	433
A.1	Meeting Papers	433
A.2	Journal Articles	441
A.3	Books/Chapters in Books	447
A.4	RLE Publications	448
A.5	RLE Theses	448
Appendix B	Current RLE Personnel	451
Appendix C	Milestones	457
C.1	New Faculty and Staff	457
C.2	Promotions	458
C.3	Retirements	458
C.4	Tenure	459
C.5	Awards and Honors	459
C.6	In Memoriam	461
Appendix D	RLE Research Support Index	463
Project Staff and Subject Index		465
